SAFETY CHECK-OUT (US Model)

After correcting the original service problem, perform the following safety check before releasing the set to the customer:

Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microamperes). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.

3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2 V AC range are suitable. (See Fig. A)

Fig. A. Using an AC voltmeter to check AC leakage.

FUNCTION OF CONTROLS

1 45-rpm adaptor

2 Disc centering guides

3 Tonearm

4 Arm rest

5 Cartridge

6 ANTI-SKATING compensator

Normally, set it at the center position. If the stylus is driven inward when the tone arm is lowered to the lead-in groove, turn the ANTI-SKATING compensator to $\oplus$. If the stylus is driven outward, turn the ANTI-SKATING compensator to $\ominus$.

7 ∇/∇ (cueing) lever

Used to lift or lower the tonearm.

8 REJECT button

To stop during play, press this button.

9 SPEED selector

Set the SPEED selector according to the speed of the record to be played. For 45-rpm records, depress the selector. For $33\frac{1}{3}$ -records, press it again.

MOTOR REMOVAL

ARM SECTION REMOVAL

LEAD WIRE INSTALLATION

- 1 Pass piano wire with lead wires through pipe as shown in Fig. A.
- 2 Pass piano wire with lead wires through center joint assy as shown in Fig. B.

SECTION 3 ADJUSTMENTS

Speed Adjustment (Using a stroboscope board)

Note: Be sure to perform 45 rpm adjustment before 33 rpm.

1. Put a stroboscope board on the mat.
2. Set the SPEED switch to 45.
Depress the lifter knob to make a lift-up mode and move the arm on most outer-groove of a record.
Adjust RV102 so that the stripped pattern of stroboscope board is stationary.
3. Set the SPEED switch to 33.
Adjust RV101 in the same way.

(Using a test record)

Note: Be sure to perform 45 rpm adjustment before 33 rpm.

1. Put a test record (YFSC-16) on the mat.
2. Move the arm on a-2 (3 kHz) section and trace it.
3. Adjust RV102 so that the frequency is 4038 – 4062 Hz.
4. Set the SPEED switch to 33.
Adjust RV101 so that the frequency is 2991 – 3009 Hz.

Stylus Height Adjustment

1. Put a test record (YFSC-16) or a record on the mat.
2. Depress the lifter knob to make a lifter-up mode and move the arm on most outer-groove of a record. Confirm that the stylus height from a record is within specification. If not, turn the adjustment screw.
3. Move the arm on most inner-groove of a record and confirm that the stylus height from a record is within specification. If not, turn the adjustment screw and repeat steps 2 and 3.

Specification: 4 ~ 12 mm

Automatic Return Position Adjustment

1. Put a test record (YFSC-16) on the mat.
2. Set the SPEED switch to 33 and move the tonearm on a return check groove.
3. Turn the adjustment screw so that the tonearm starts to return at count of 4 – 10.
