## STEREO TURNTABLE SYSTEM

### SPECIFICATIONS

#### Turtable

Platter	32 cm (12½ in.), aluminum-alloy diecast
Motor	Linear torque BSL (brushless and slotless) motor
Drive system	Direct drive
Control system	Quartz lock control, magnedisc servo control system
Speed	33⅓ rpm, 45 rpm
Starting characteristics	Comes to nominal speed within a half revolution (33⅓ rpm)
Wow and flutter	0.015% (WRMS)* 0.025% (WRMS) ±0.03% (DIN)
Signal-to-noise ratio	78 dB (DIN-B)
Load characteristics	0% up to 150 g stylus force (at lead-in groove of a record)
Speed deviation	Within 0.003%
Automatic system	Lead-in, return, reject, repeat, record size selection, zero balance

#### Tonearm

Type	Electronic tonearm, linear tracking
Pivot-to-stylus length	180 mm (7⅜ in.)
Overall arm length	246 mm (9⅝ in.)

Tracking error ±0.05°

#### SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY SHADING AND MARK ON THE SCHEMATIC DIAGRAMS, EXPLODED VIEWS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

Stylus force adjustment range 0.5 - 3.0 g (electronic adjustment)

Cartridge shell weight 7.2 g

Cartridge weight range (including a cartridge shell)

10 - 17 g

16 - 23 g (with thin extra weight)

22 - 29 g (with thick extra weight)

— Continued on next page. —

#### ATTENTION AU COMPOSANT AYANT RAPPORT À LA SÉCURITÉ!

LES COMPOSANTS IDENTIFIÉS PAR UNE TRAME ET UNE MARQUE SUR LES DIAGRAMMES SCHÉMATIQUES, LES VUES EXPLOSÉES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈCES SONY DONT LES NOMBRES SONT DONNÉS DANS CE MANUEL OU DANS LES SUPPLÉMENTS PUBLIÉS PAR SONY.

**SONY**  
**SERVICE MANUAL**

MICROFILM

# PS-X800

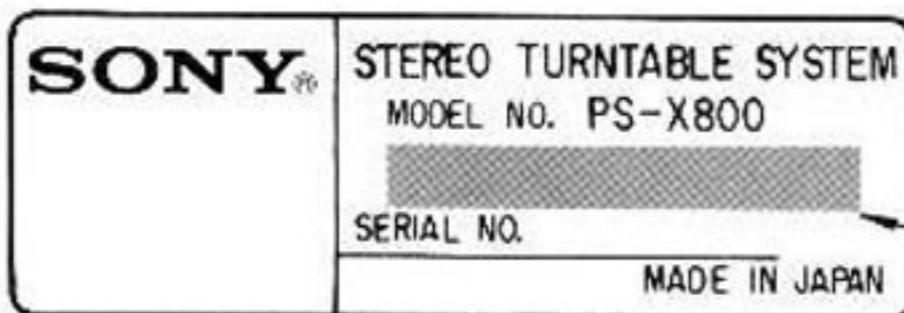

## General

Power requirements	AEP model: 220 V ac, 50/60 Hz UK model: 240 V ac, 50/60 Hz E model: 110–120 V or 220–240 V ac adjustable, 50/60 Hz US, Canadian model: 120 V ac, 60 Hz
Power consumption	45 W
Dimensions	Approx. 440 x 120 x 445 (w/h/d) (17 3/8 x 4 3/4 x 17 5/8 in.) including projecting parts and controls
Weight	Approx. 11.6 kg (25 lbs 10 oz), net Approx. 13.0 kg (28 lbs 10 oz), in shipping carton

\* This new measuring method concerns only the turntable assembly, including the platter. It excludes wow and flutter caused by the tonearm, the cartridge, or the record. Measured by obtaining signal from magnetic pick up head.

## MODEL IDENTIFICATION

— Specification Label —

US, Canadian model:  
AC 120 V 60 Hz 45W

AEP model:  
AC 220 V ~50/60 Hz 45W

UK model:  
AC 240 V ~50/60 Hz 45W

E model:  
AC 110 – 120, 220 – 240 V ~50/60 Hz 45W

## Handling Precautions for MOS ICs

Generally, the insulation resistance of the oxide layer in MOS IC structures is very high, and the oxide layer is very thin. Because of this, it is possible that the static voltages usually present on clothes and the human body will be enough to generate a potential difference across the insulator, high enough to cause a breakdown of the insulating layer.

The following precautions should be taken while handling these ICs.

(Particular care should be taken under conditions of low humidity.)

### Precautions in Replacing MOS ICs

1. Store new ICs by inserting them into a urethane-polyester cushion (which is somewhat conductive), or wrapping it in aluminum foil, so that all the pins are at the same potential.

(The ICs should be stored in that manner until mounted on the circuit board.)

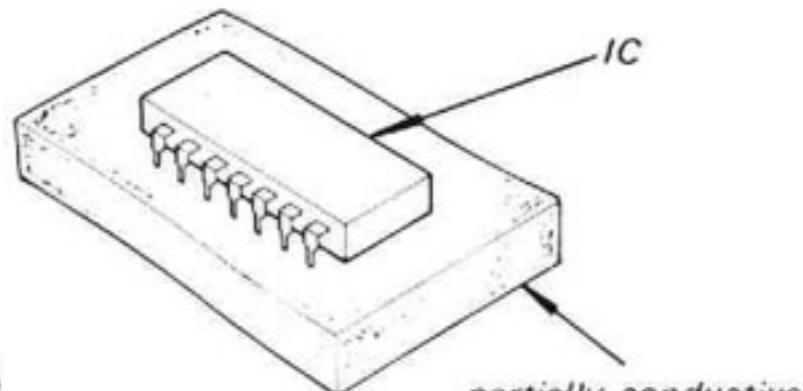

Fig. A

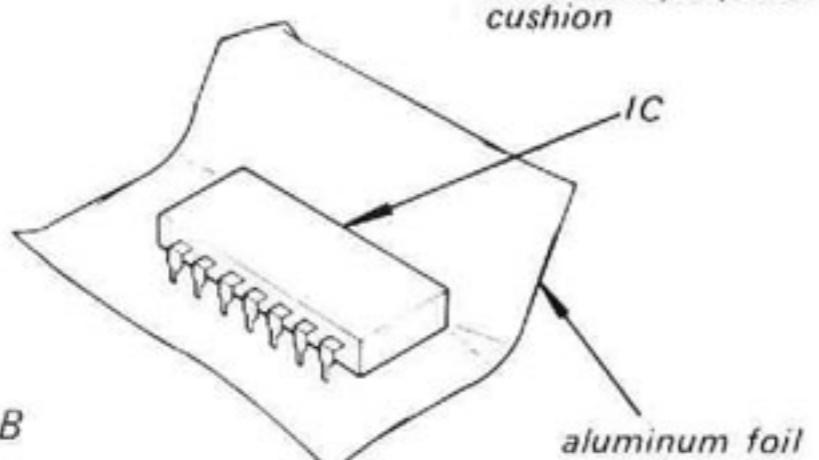

Fig. B

2. Check the soldering iron for possible power-line leakage current. Make sure that there is no leakage path by connecting an ohmmeter to the tip of the soldering iron and the plug as shown in Fig. C. If there is a leakage path, use some other soldering iron.

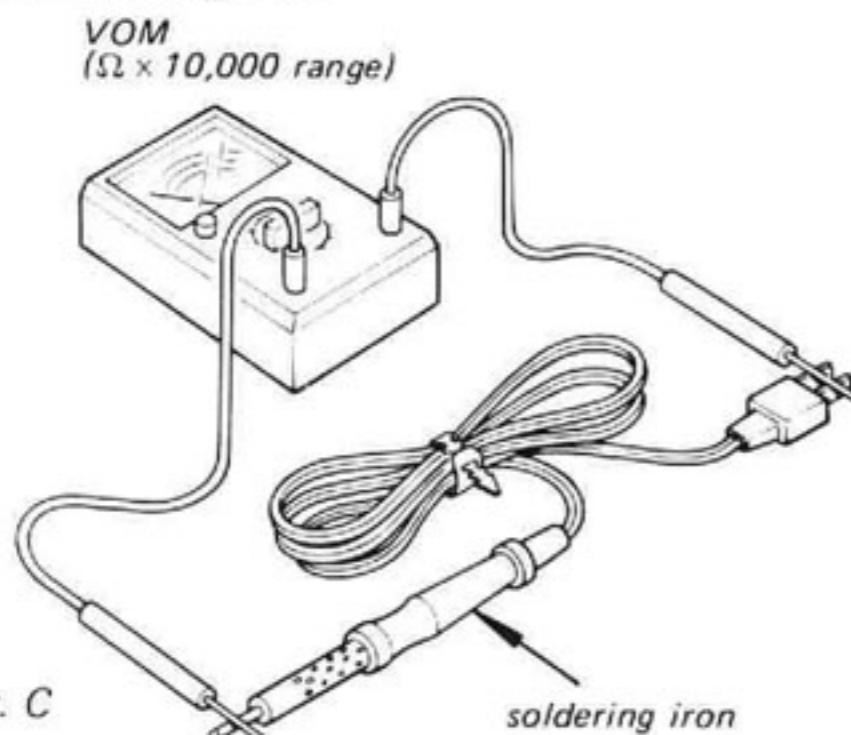

Fig. C

3. Equalize any potential difference between the clothes, the tools in use, the work bench, the set being worked on, and the packaged IC by touching them all in succession with the hands or a conductive wire or tool.
4. The following are effective methods for handling ICs that remove the potential difference across the oxide layer.
  - Use a paper clip modified by soldering in a wire braid insert.

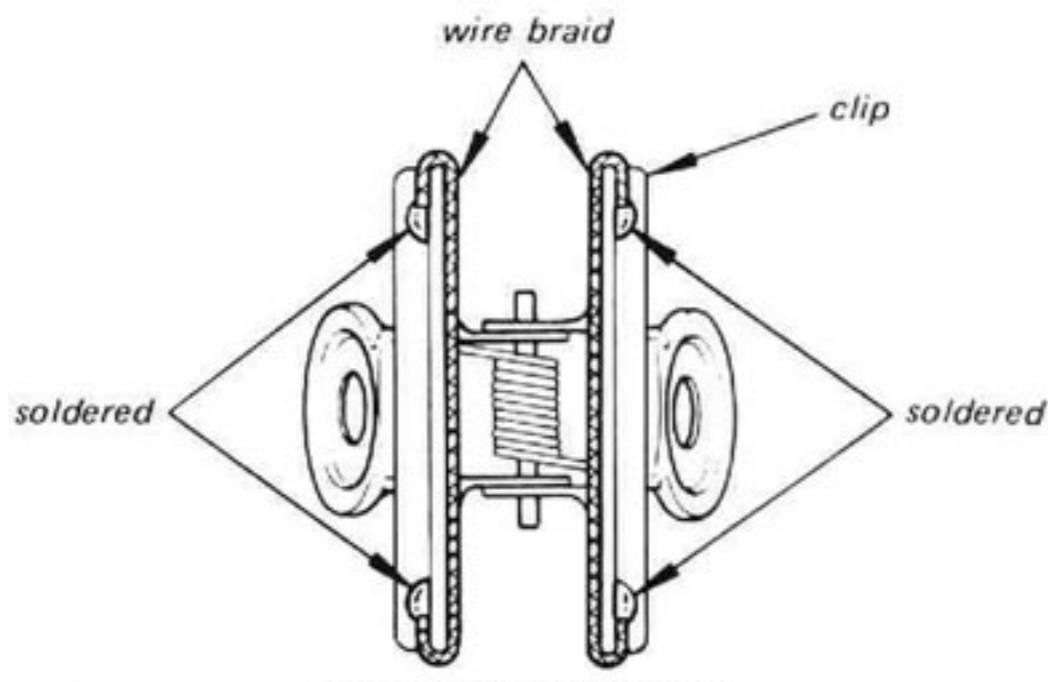

Fig. D

*Make sure that there is no solder on the inside.*

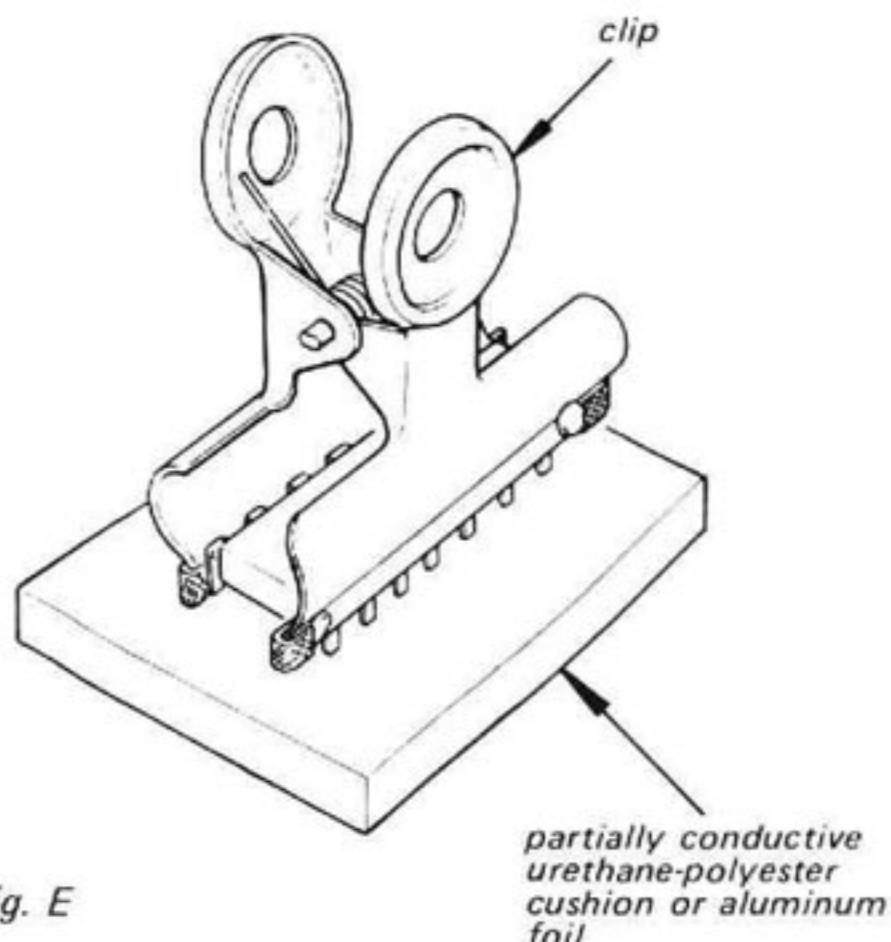

Fig. E

*partially conductive urethane-polyester cushion or aluminum foil*

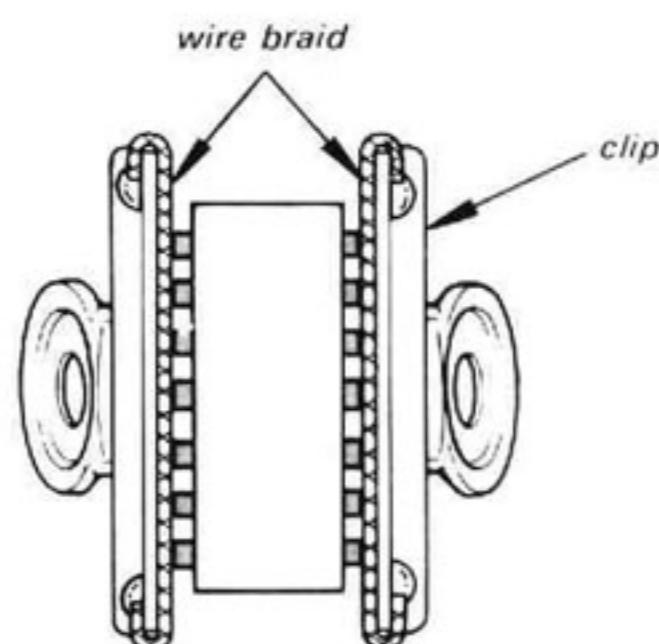

Fig. F

*Make sure that all the pins are in contact with the wire braid (all the pins will then be at the same potential.).*

- Take a short length of fine bare wire and wind it around the IC so that it shorts all the pins of the IC, while it is still in the urethane-polyester cushion or aluminum foil. This ensures that all the pins are at the same potential.

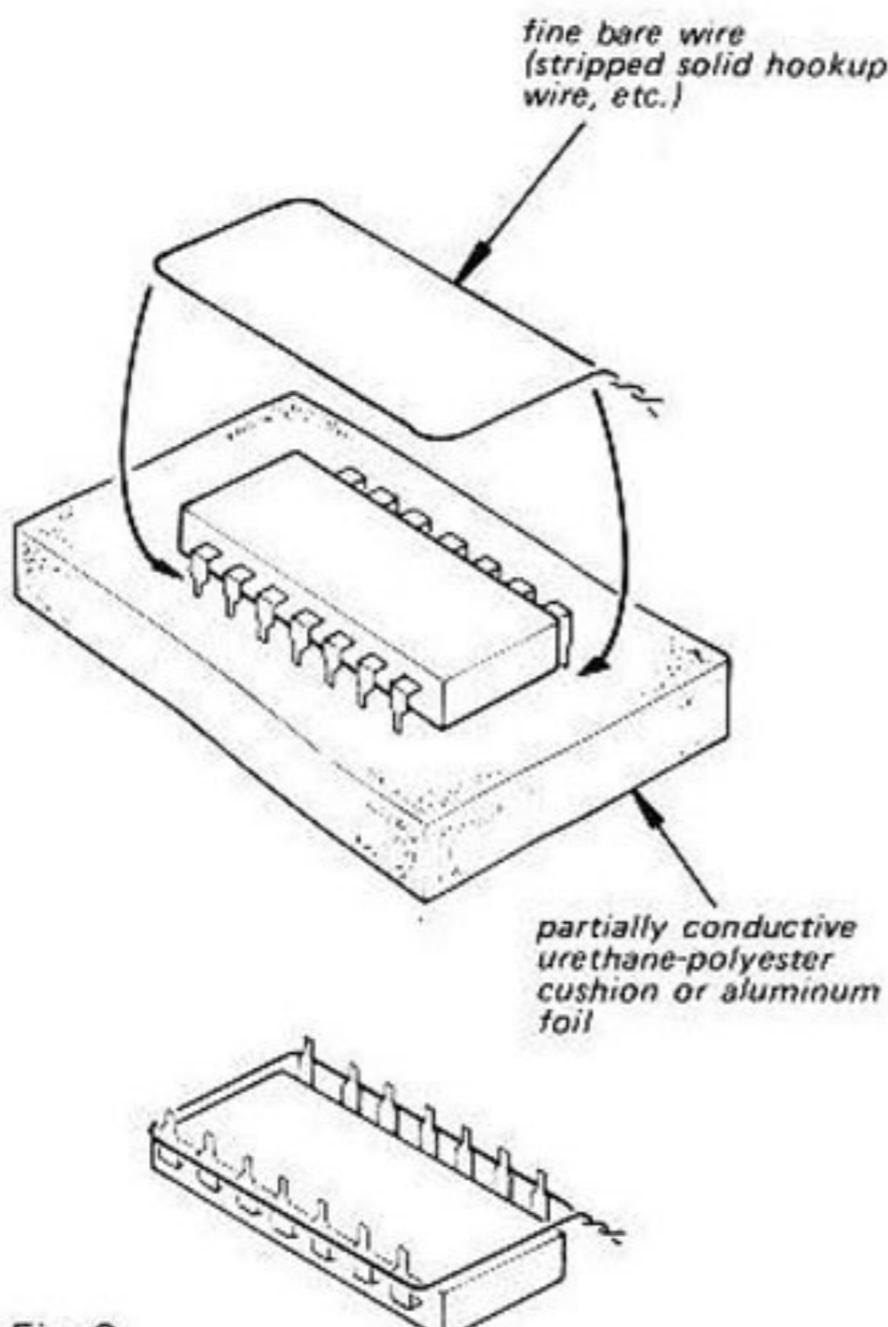

Fig. G

- When it is necessary to handle the IC with the fingers, do not touch any pin, and hold the IC at the ends of its plastic-package case as shown in Fig. H.

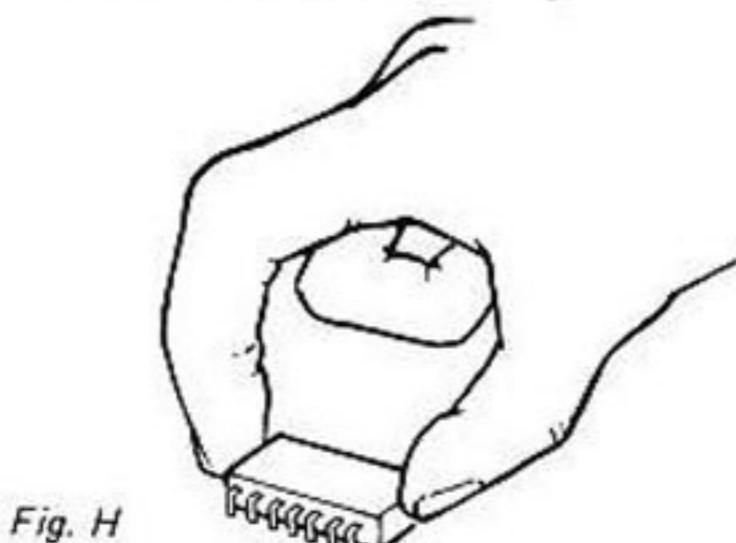

Fig. H

#### Method of Mounting

Insert the IC while holding it with the modified clip, and solder all the pins with the clip still shorting the pins. (Similarly, solder all the pins while the bare shorting wire is still wound around them.). Remove the clip or the bare shorting wire only after all the pins have been soldered.

#### Precaution while Checking C-MOS ICs

The C-MOS ICs (Complementary MOS) are MOS ICs that have their output sections made up of N-channel and P-channel push-pull stages to increase their speed of operation. If the output terminal of these ICs comes into contact with B+ or B- voltage, then the FET which is ON at that time will either become shorted or open.

This is valid for all the output sections that are connected together by the interconnections. Even the circuits that are physically separated (and not on the same board) can be destroyed simultaneously.

#### Example:

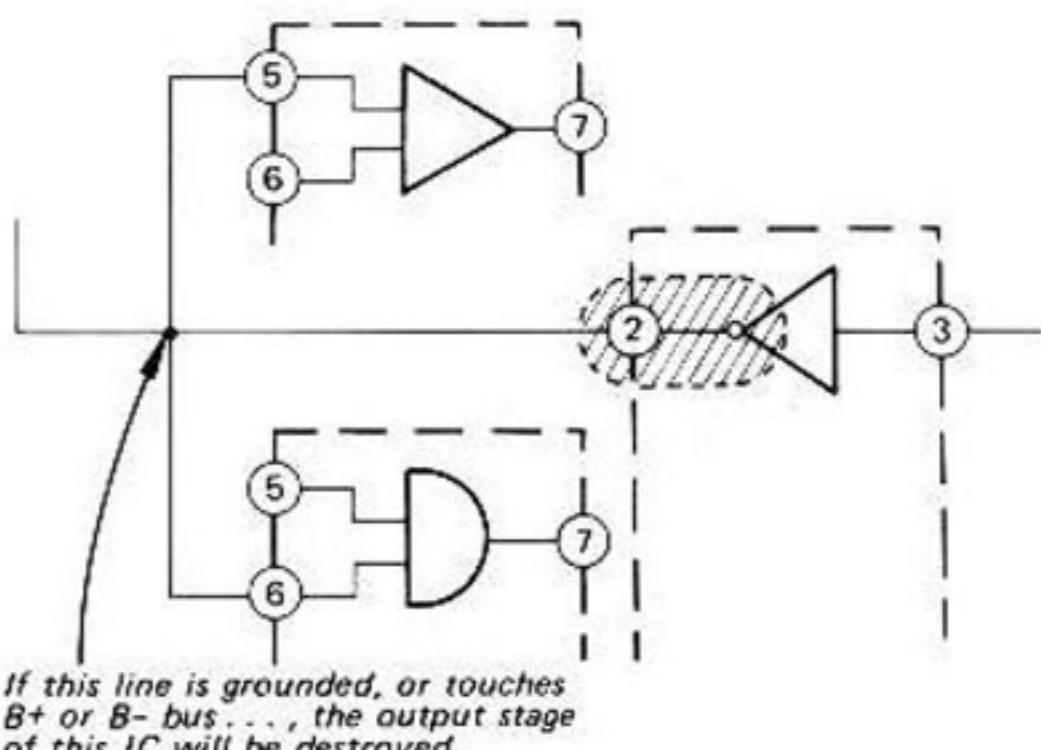

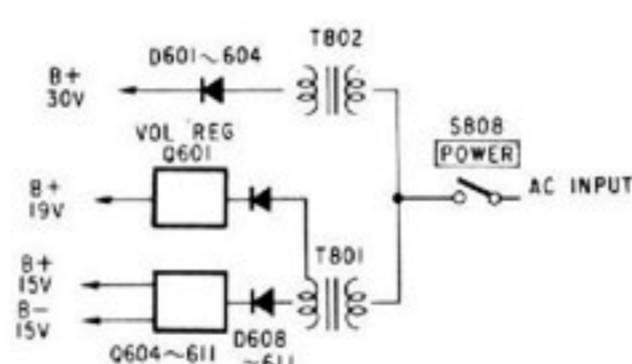

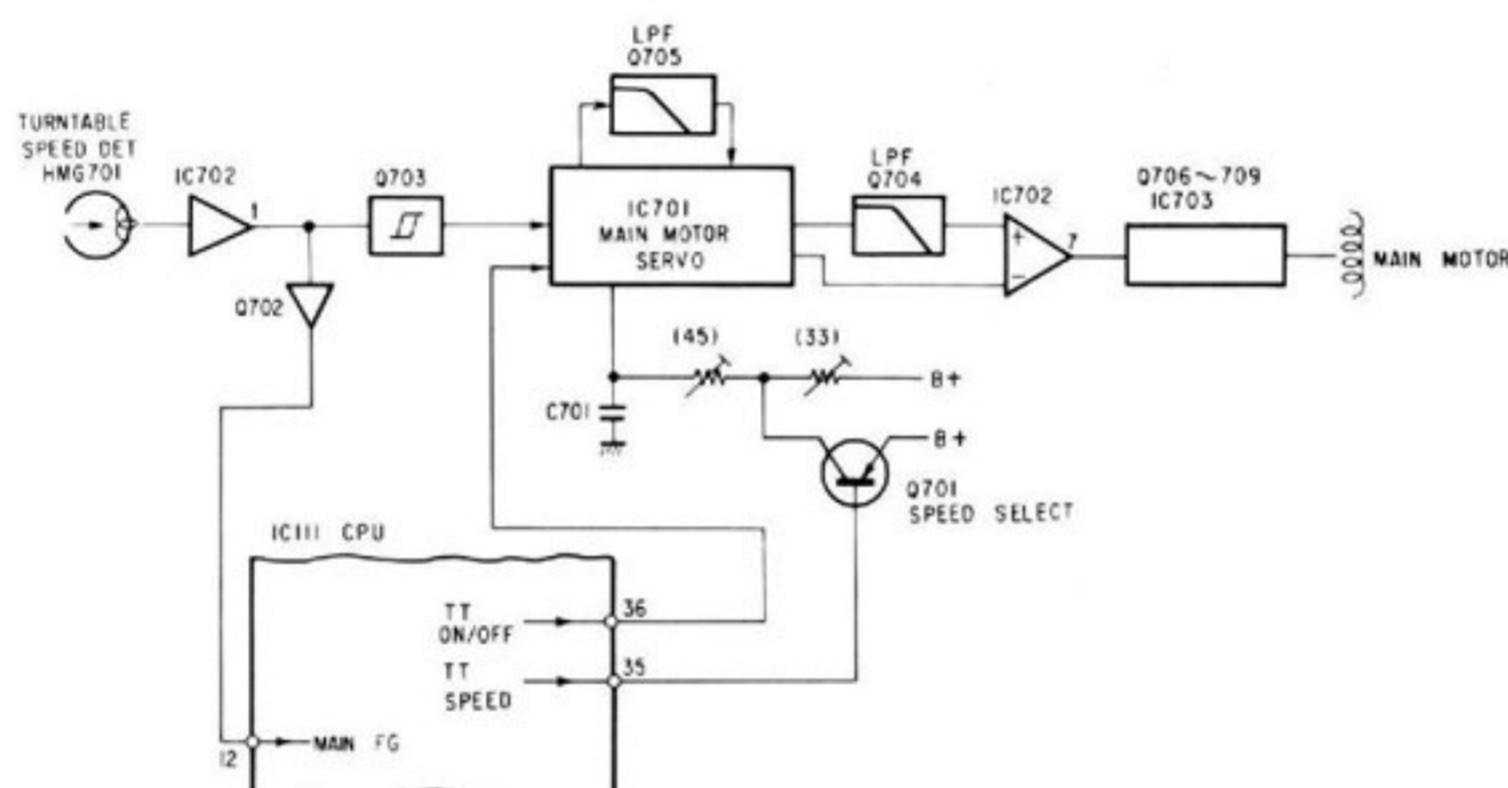

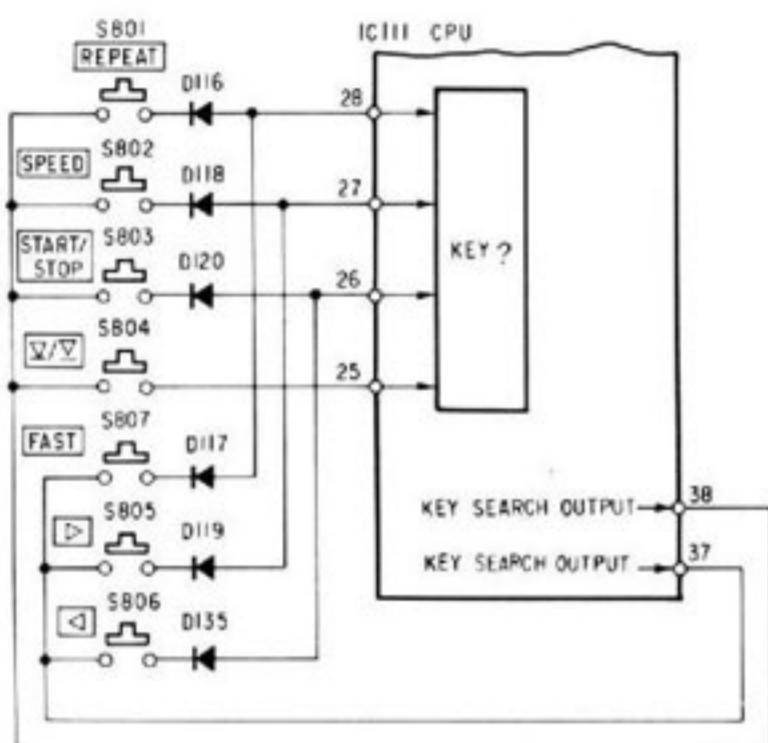

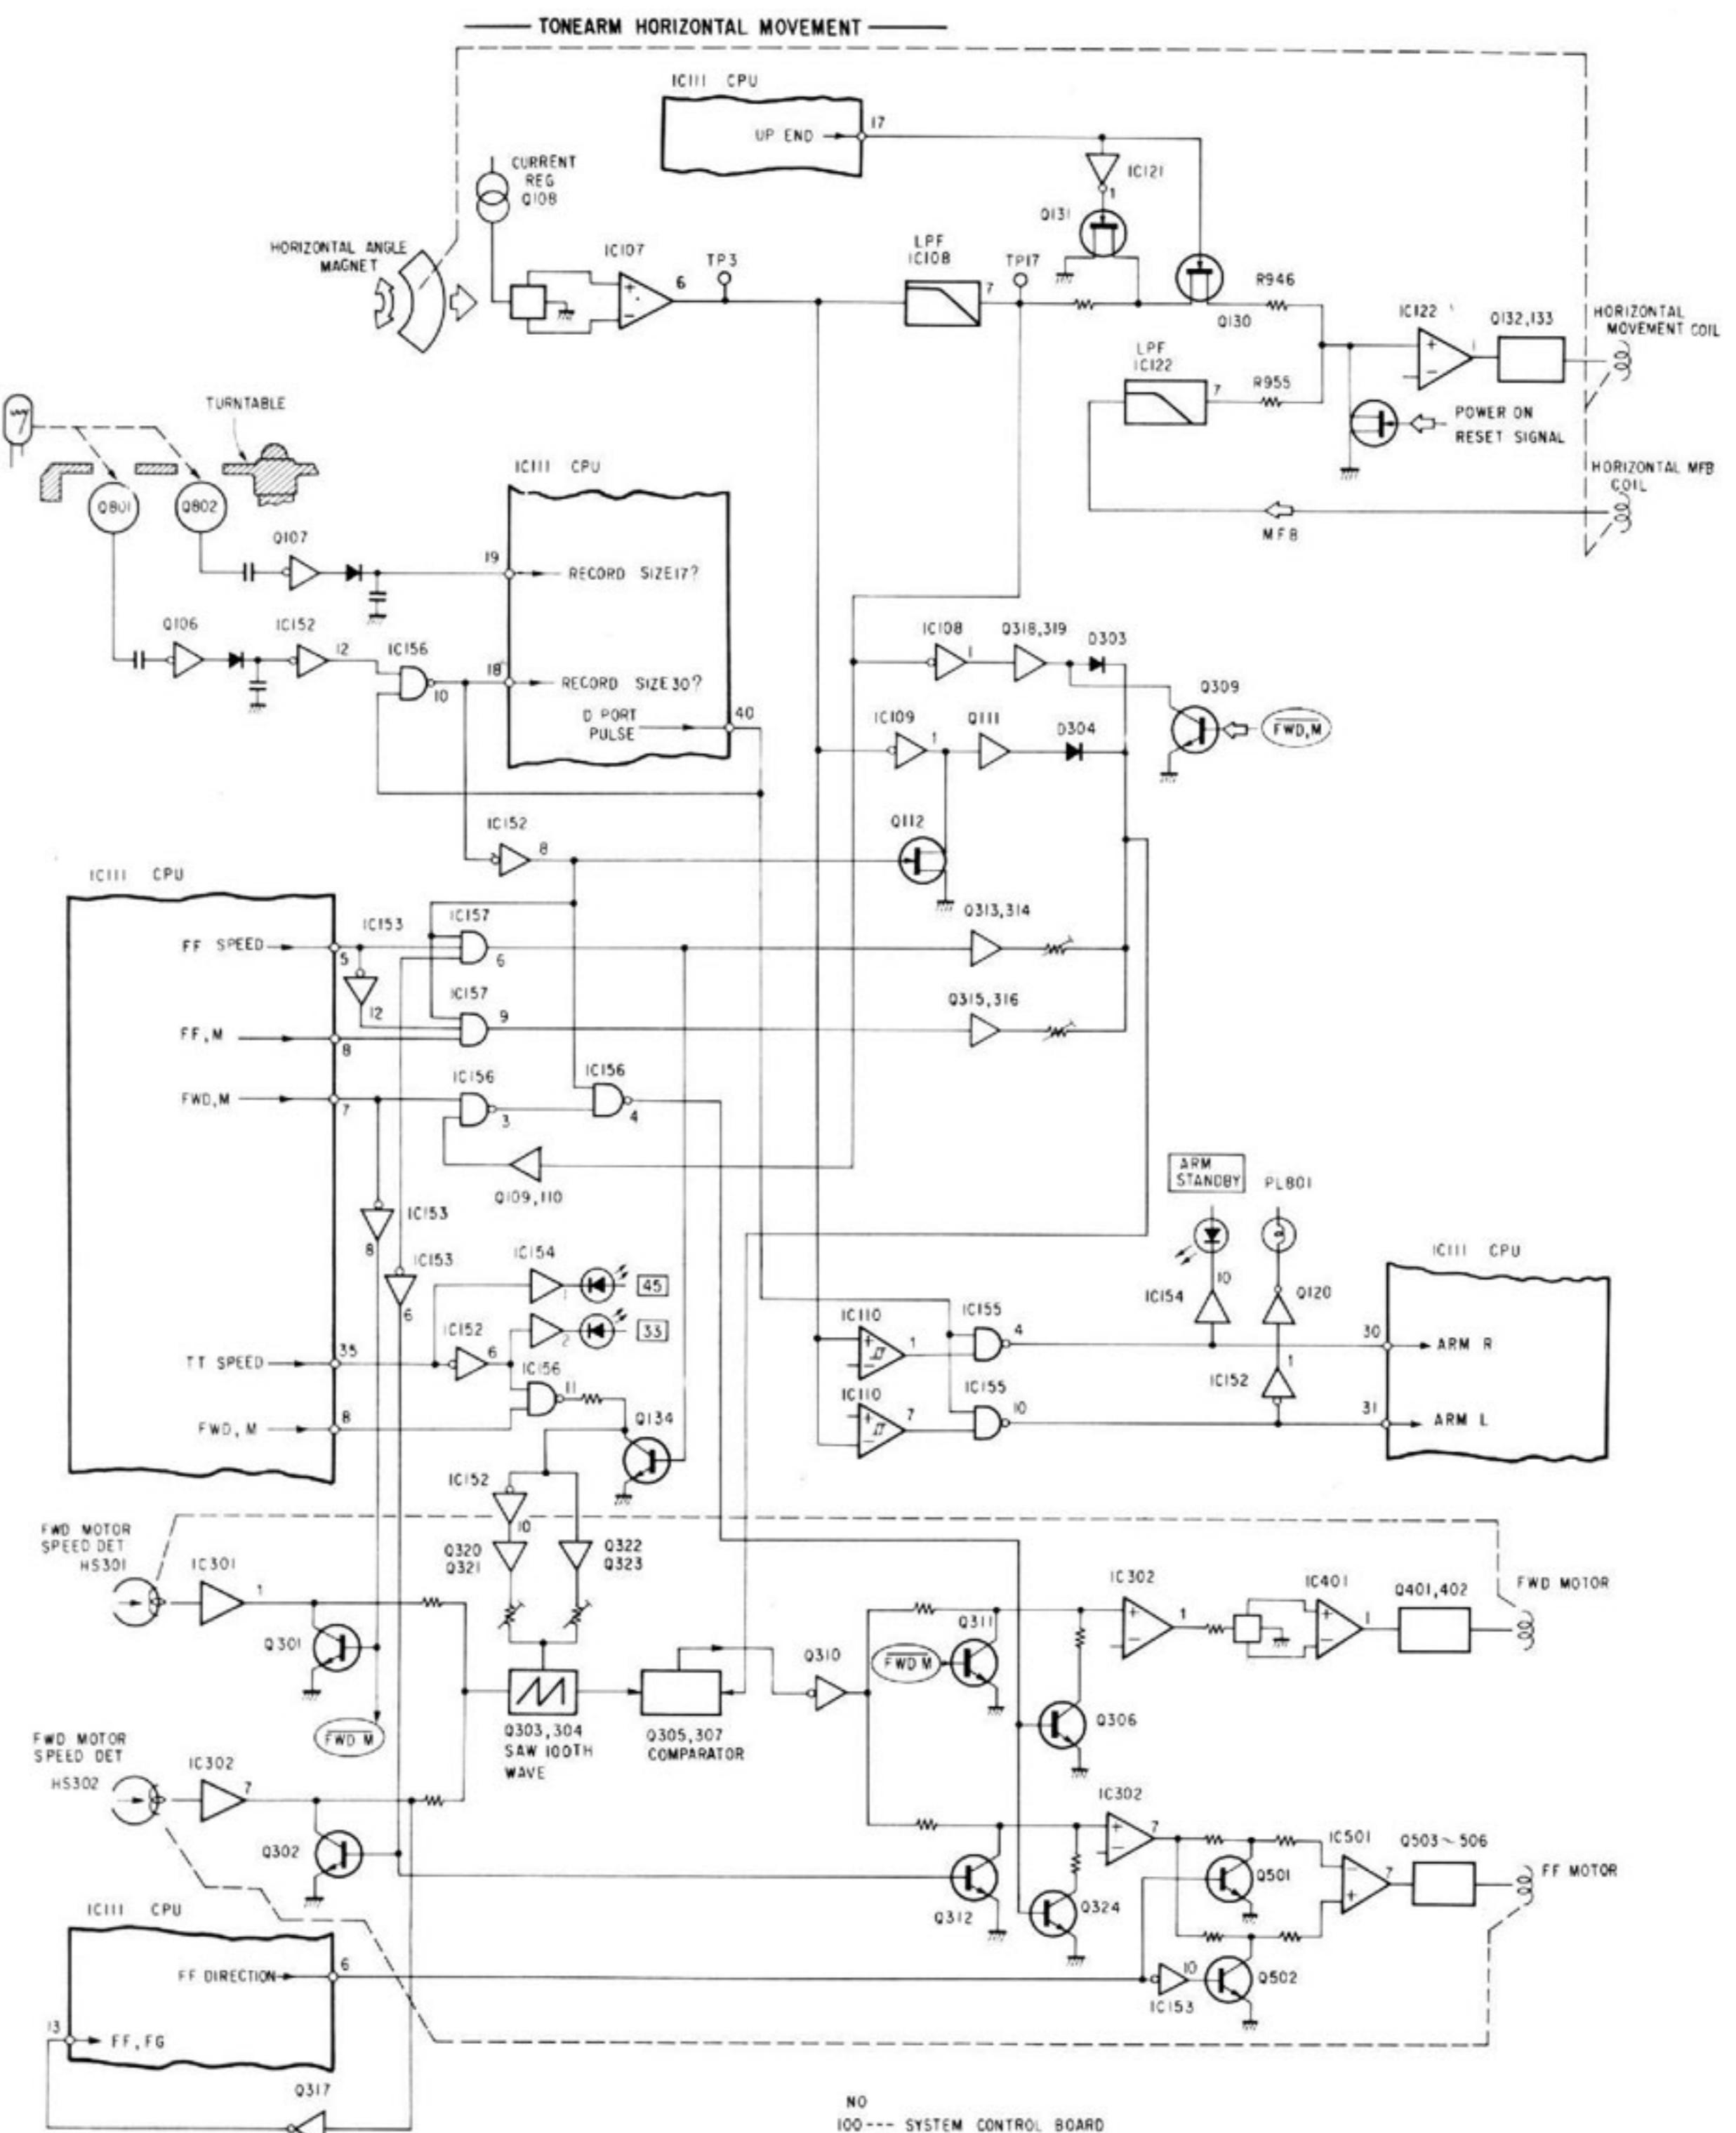

Fig. I

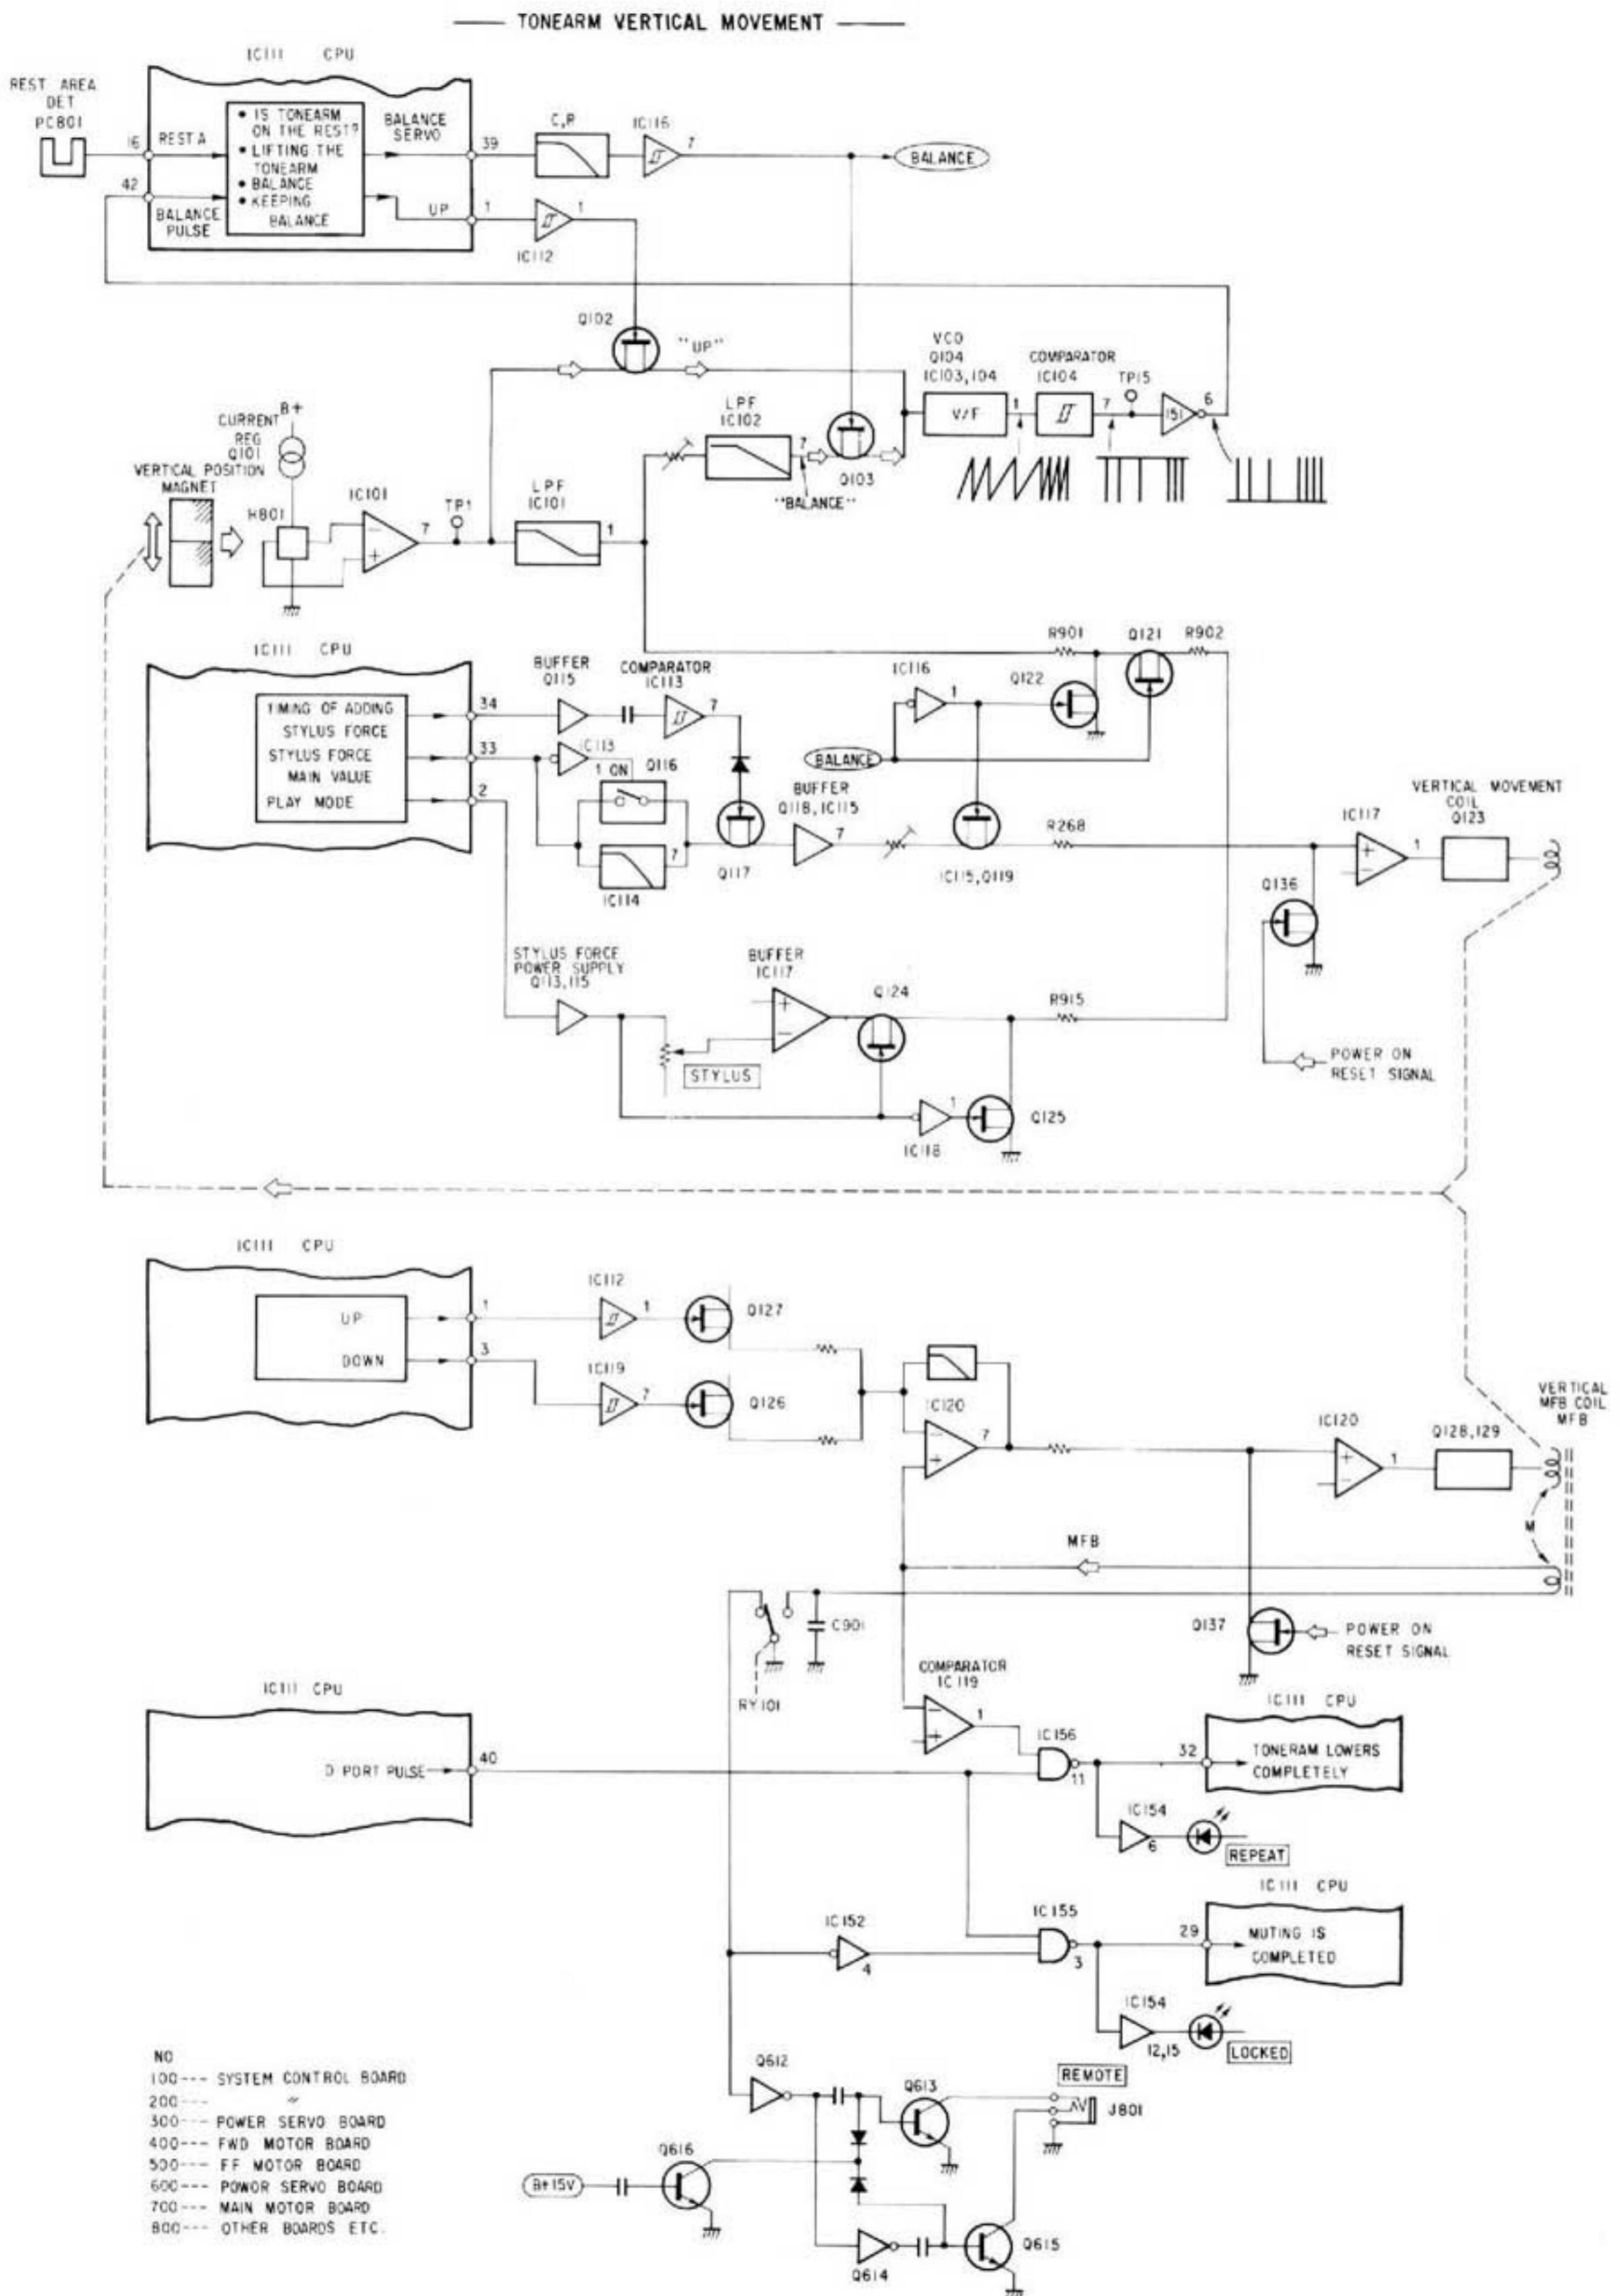

# SECTION 1

## OUTLINE

### 1-1. BLOCK DIAGRAM

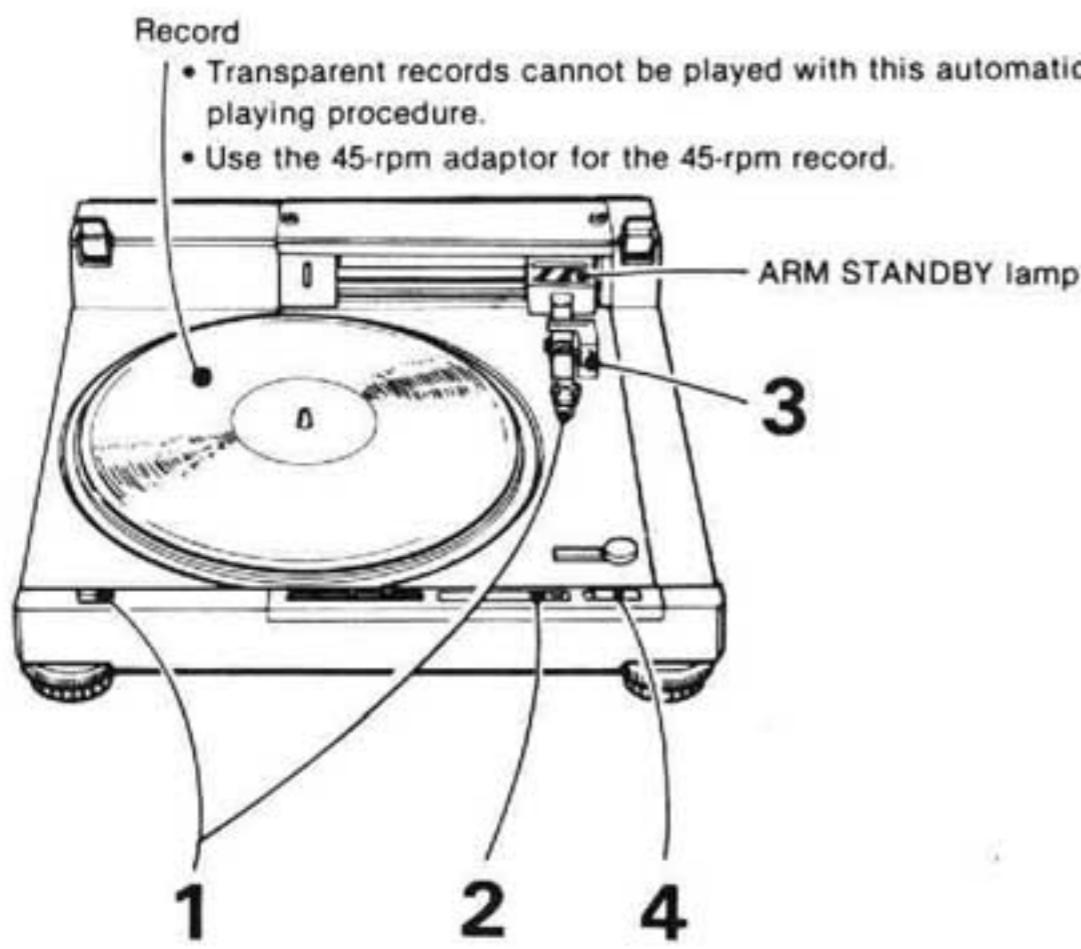

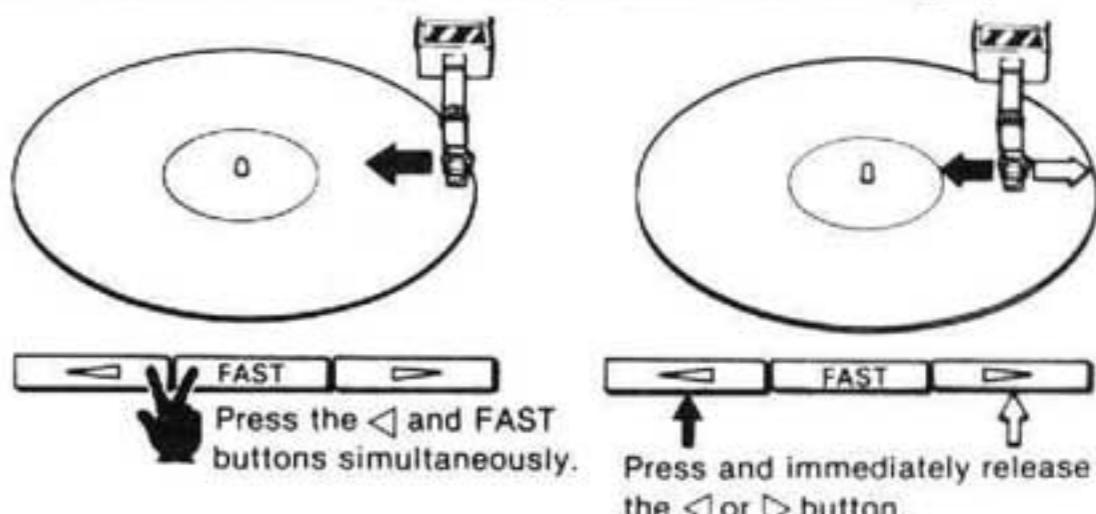

## 1-2. OUTLINE

## RECORD PLAYING—Auto play

## TO BEGIN RECORD PLAY AT A PARTICULAR POINT

- Remove the stylus cover and depress the POWER switch (ON).
- Press the SPEED selector to play a 45-rpm record. (Press this again for a 33⅓ rpm record.)
- Release the arm rest cramp. The ARM STANDBY lamp is turned off when the tonearm balance adjustment is finished.
- Move the tonearm over the record, pressing the  $\triangleleft$  button and the FAST button. For fine adjustments, press and immediately release the  $\triangleleft$  button or the  $\triangleright$  button or push the tonearm slightly.

- Press the START/STOP button, and the record playing will begin.

- 1 Remove the stylus cover and depress the POWER switch (ON).
- 2 Press the SPEED selector to play a 45-rpm record. (Press this again for a 33⅓ rpm record.)
- 3 Depress the lever and release the cramp of the arm rest. The ARM STANDBY lamp is turned off when the tonearm balance adjustment is finished.

- 4 Press the START/STOP button and the record playing will begin.

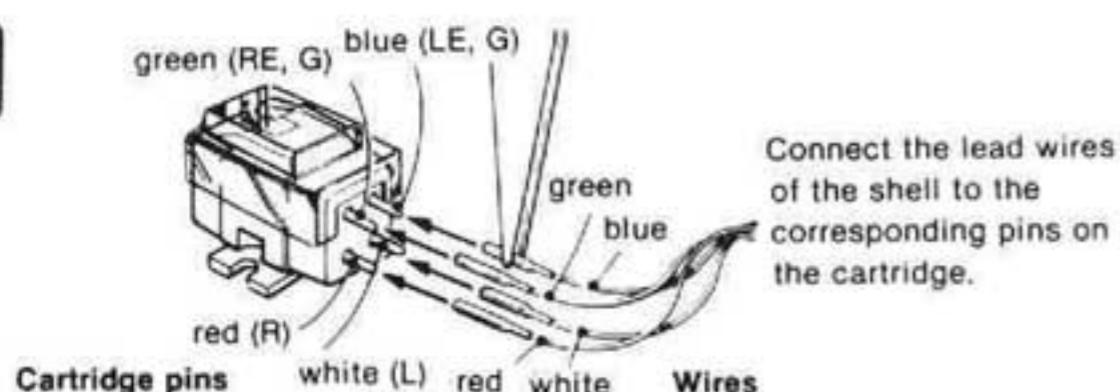

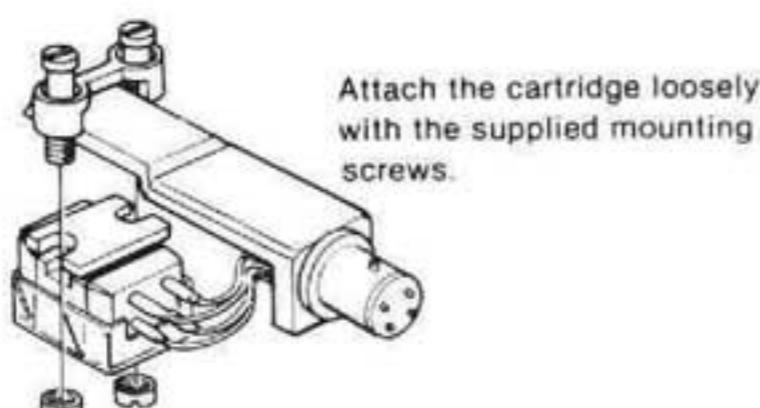

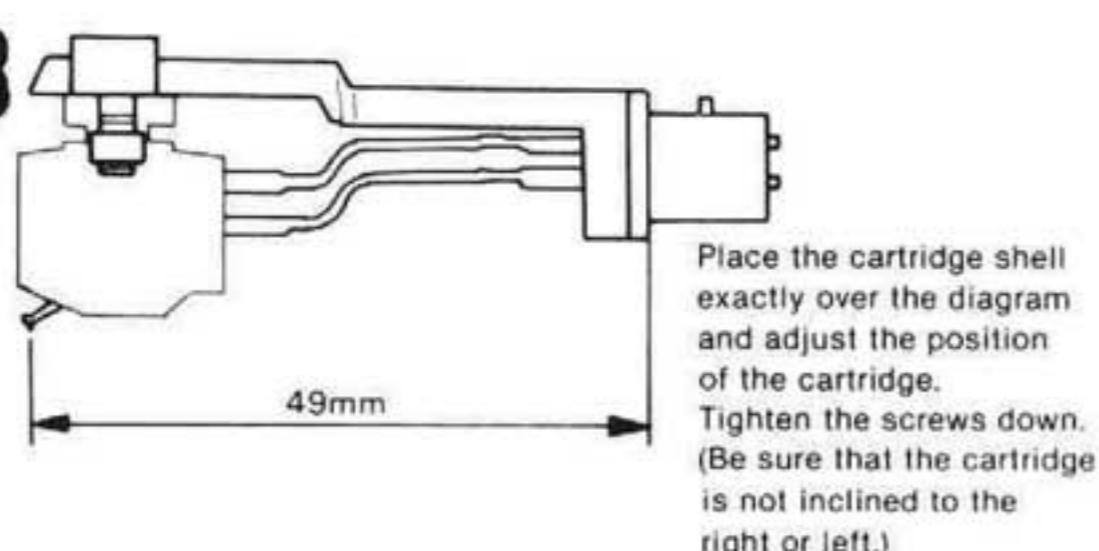

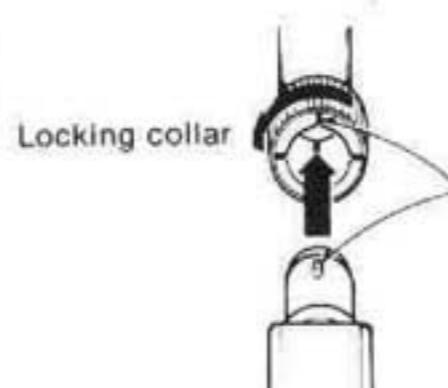

**When the tonearm reaches the end of the record,** the turntable will stop and the tonearm will automatically return to the arm rest. Secure the tonearm to the arm rest and turn the POWER switch off.

**Tonearm auto-balance adjustment**

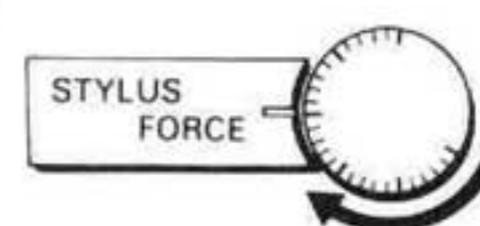

It is critically important for good sound reproduction that the stylus traces the record groove accurately and with the proper stylus force. To do this, the tonearm must first be balanced so that the proper stylus force can be applied. The Sony PS-X800 turntable automatically adjusts the tonearm balance electronically when the power is turned on or the START/STOP button is pressed with the tonearm secured to the arm rest. And every time the record playing is finished, the tonearm balance is automatically adjusted again. The ARM STANDBY lamp illuminates when tonearm balance is being adjusted.

**When the cartridge shell (or cartridge) is replaced,** secure the tonearm to the arm rest and turn the POWER switch off. To adjust the balance of the new cartridge shell (or cartridge), remove the stylus cover and turn the POWER switch on. When the ARM STANDBY lamp turns off, the adjustment is complete.

## CARTRIDGE INSTALLATION AND STYLUS FORCE ADJUSTMENT

**1****2****3****4**

Match the guide pin of the cartridge shell with the slot of the locking collar and turn it until the shell is firmly locked.

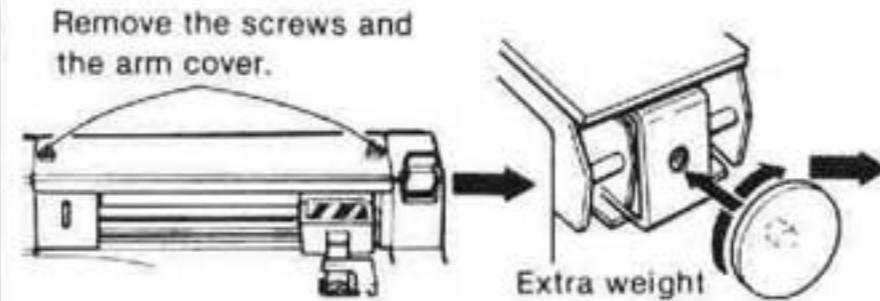

**5**

Turn the control so that the stylus force value is aligned with the guide line.

**On installation of the extra weight**

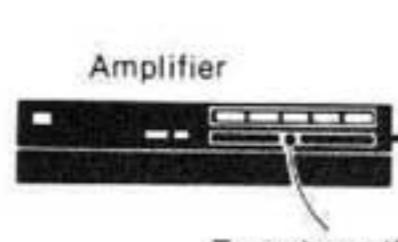

The extra weight is not needed when the cartridge weight (including the supplied 7.2 g shell) is between 10 and 17 g. Install the thin extra weight if the cartridge weight is between 16 and 23 g and the thick extra weight if between 22 and 29 g.

Remove the screws and the arm cover.

Replace the arm cover and tighten the screws firmly.

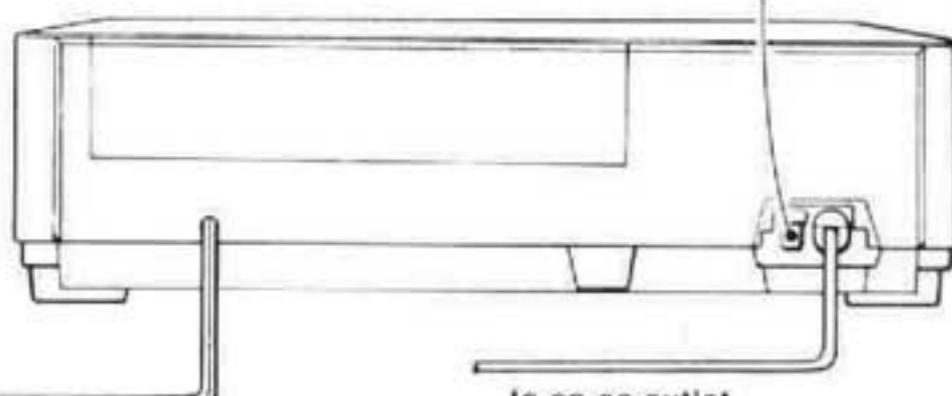

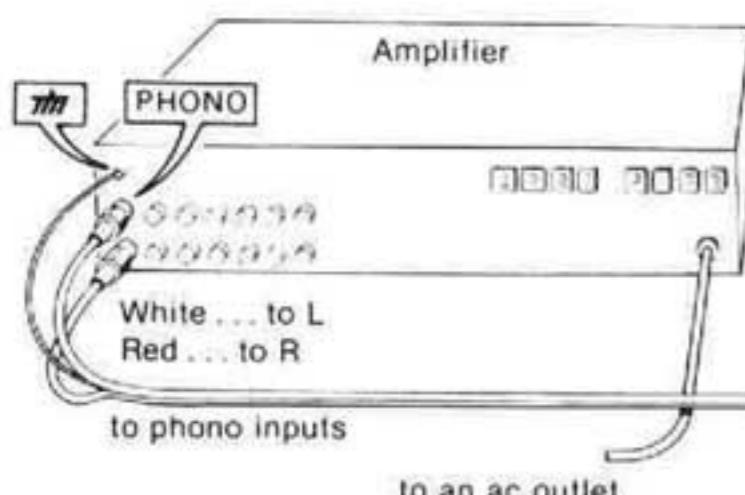

## CONNECTION TO AN AMPLIFIER

Turn down the volume.

Synchro remote control jack

## TROUBLE CHECKS

The following trouble checks will help you correct most common problems encountered with a turntable system. Should any problem persist after you have made these checks, consult your nearest

Sony service facility.

Before proceeding with these trouble checks, first refer to the connections on page 9 and the operating procedures on page 8.

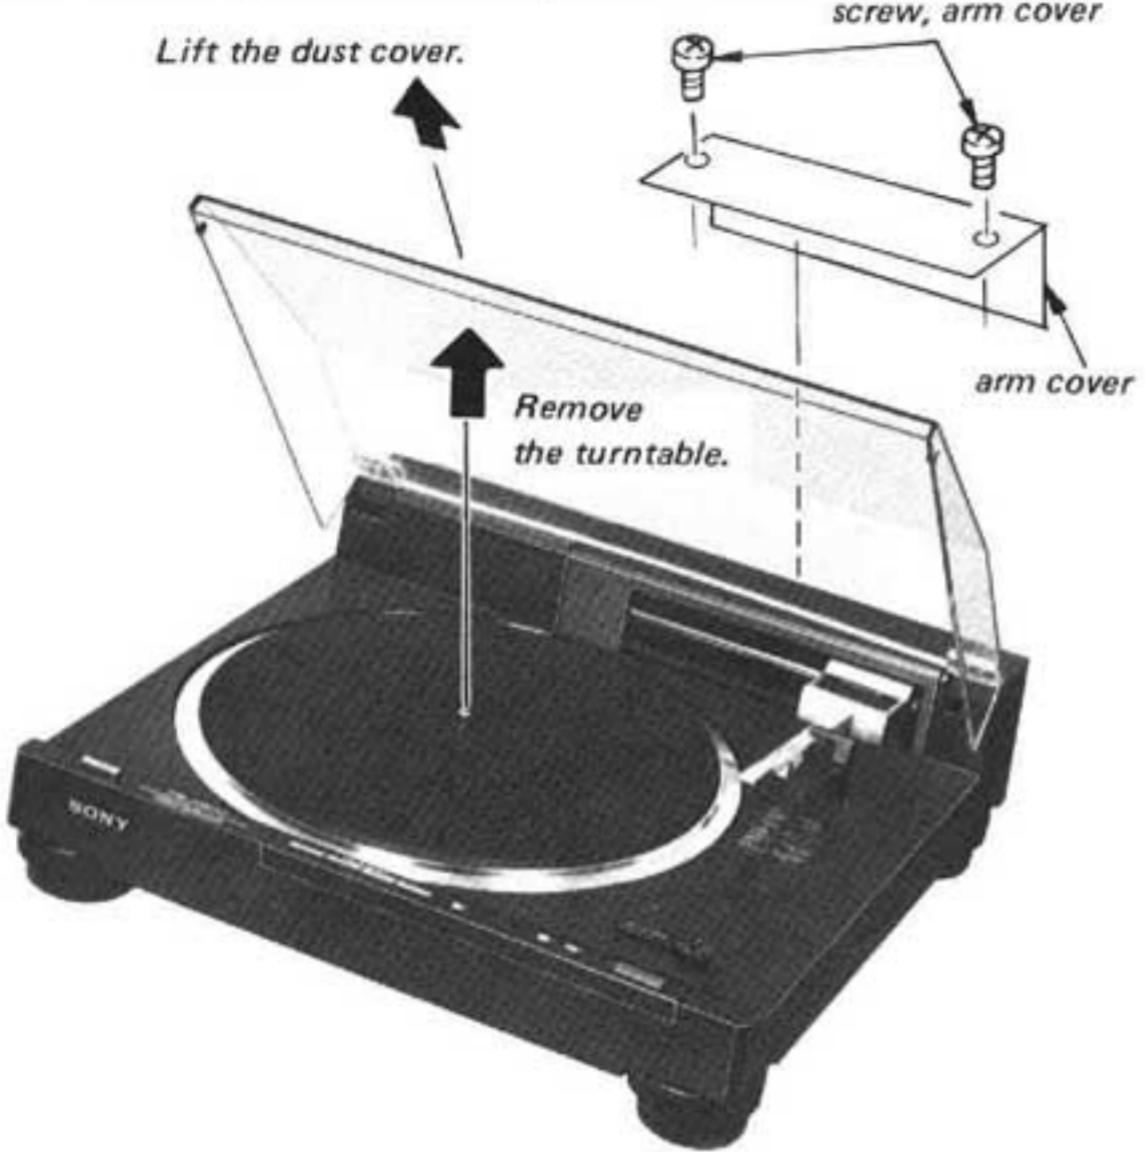

TROUBLES	CAUSES	WHAT TO DO
The tonearm does not lower on the record but returns to the arm rest.	Transparent record Warped record	Play the record manually.
The ARM STANDBY lamp does not go out.	The cartridge and the cartridge shell are too heavy (or too light.) The tonearm is secured to the arm rest.	Check the cartridge (including the cartridge shell) weight. Release the arm rest cramp.
The tonearm always lowers on the point for 30 cm records.	A rubber mat other than the one supplied being used. Incorrect placement of the supplied rubber mat	Use the supplied rubber mat. Align the holes in the rubber mat with the holes of the platter.
Auto return does not operate at the end of play.	A record with shallow return grooves being played by a cartridge with low tracking force	Apply more tracking-force.
Impaired tone quality	Improper tracking-force Dusty stylus Worn stylus	Apply proper tracking-force (See page 9.) Clean the stylus with a soft brush from back to front. The stylus life is approx. 400 hours. Replace with a new stylus.
No audio from one channel	Loose connection of phono cord Loose attachment of the cartridge shell to the tonearm Dirty cartridge shell terminals.	Connect the cord firmly. Fix the shell to the tonearm firmly. Clean the terminals with a soft dry cloth.
Steady low-pitched humming sound	Ground wire is not connected to the amplifier.	Connect the ground wire to the amplifier.
Groove skipping; tonearm skating; tonearm not advancing.	Improper tracking force Turntable not level Defective record	Apply proper tracking-force. (See page 9.) Place the turntable on a level surface. —
Loud rumble or low-frequency howl*	The turntable is subjected to external vibration. The turntable is placed too near the speaker.	Place the turntable on a solid surface free from external vibration. Locate the turntable as far away from the speaker as possible.

\* This is called "acoustic feedback" and is caused when vibrations from the speakers are transmitted through the air or via solid objects (such as the shelves, the cabinet, the floor, etc.) to the turntable, where it is picked up by the stylus, amplified and reproduced through the speakers once again.

## SECTION 2 DISASSEMBLY

N

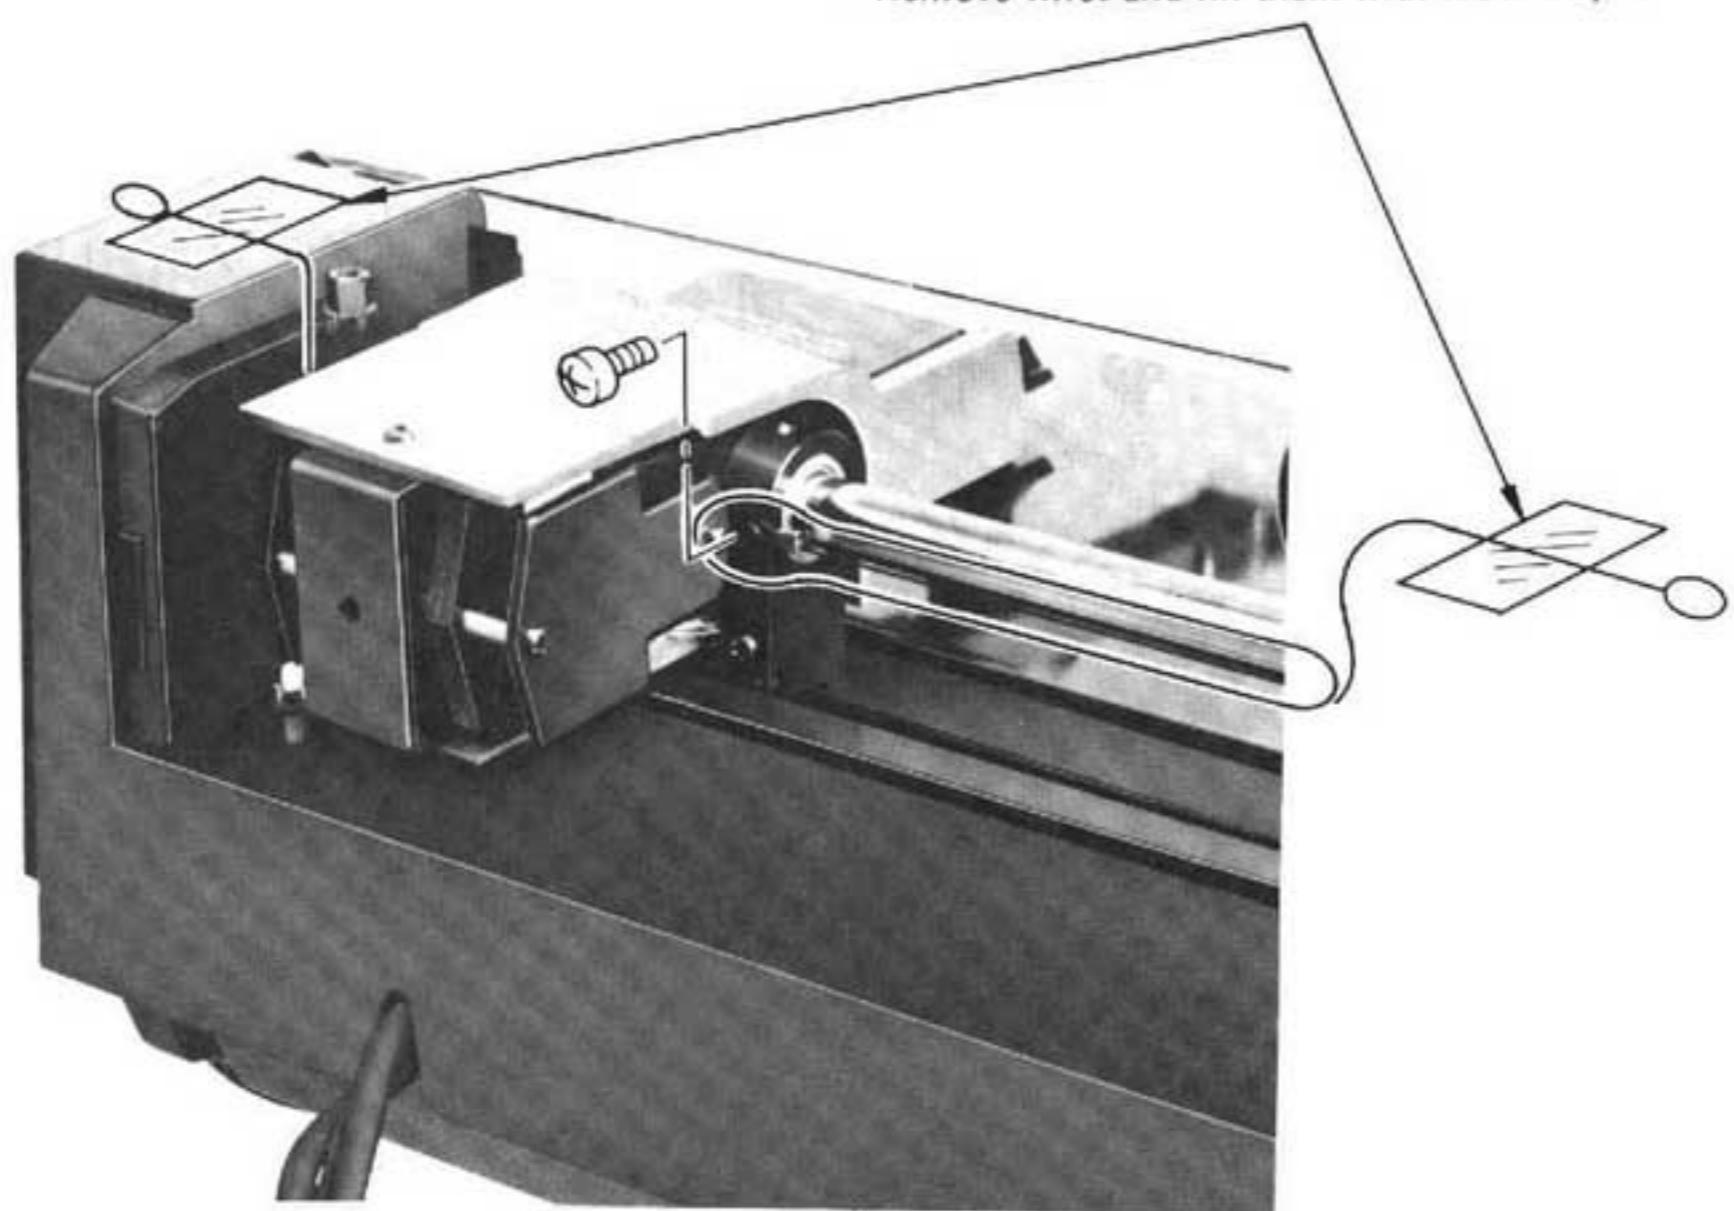

### TONEARM . . . . Remove lead wires.

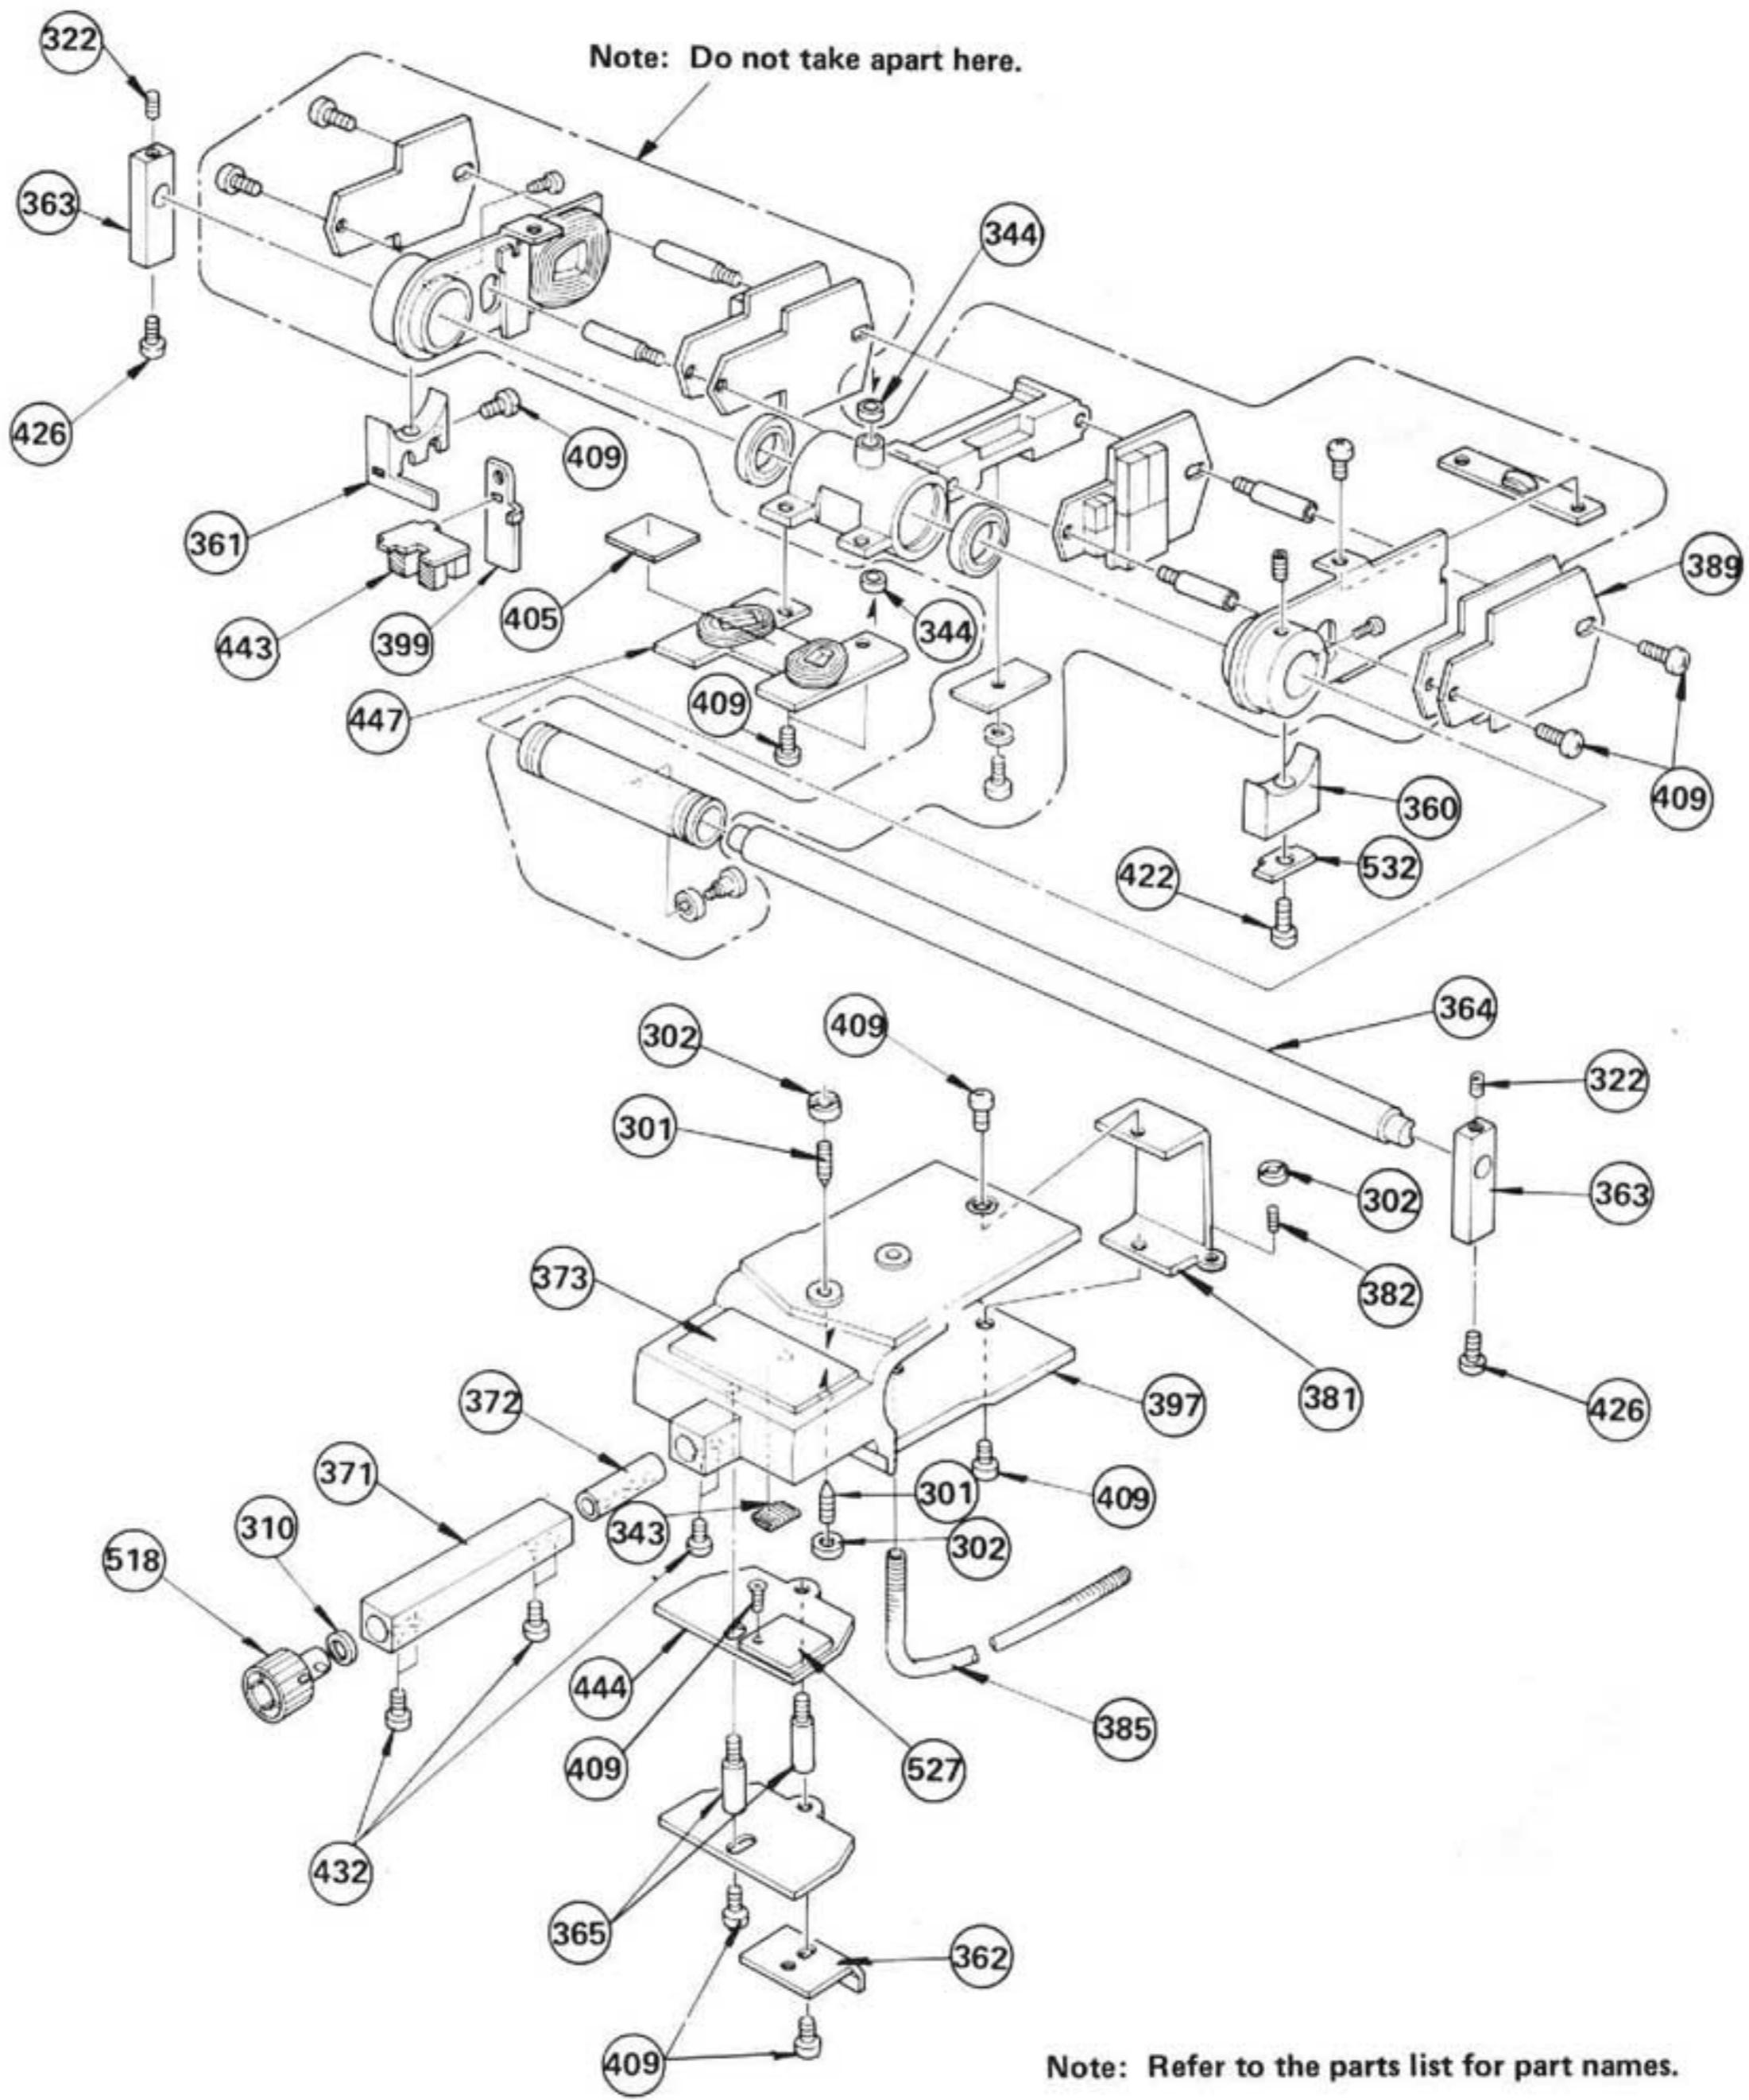

Remove the cover, wire and tonearm:

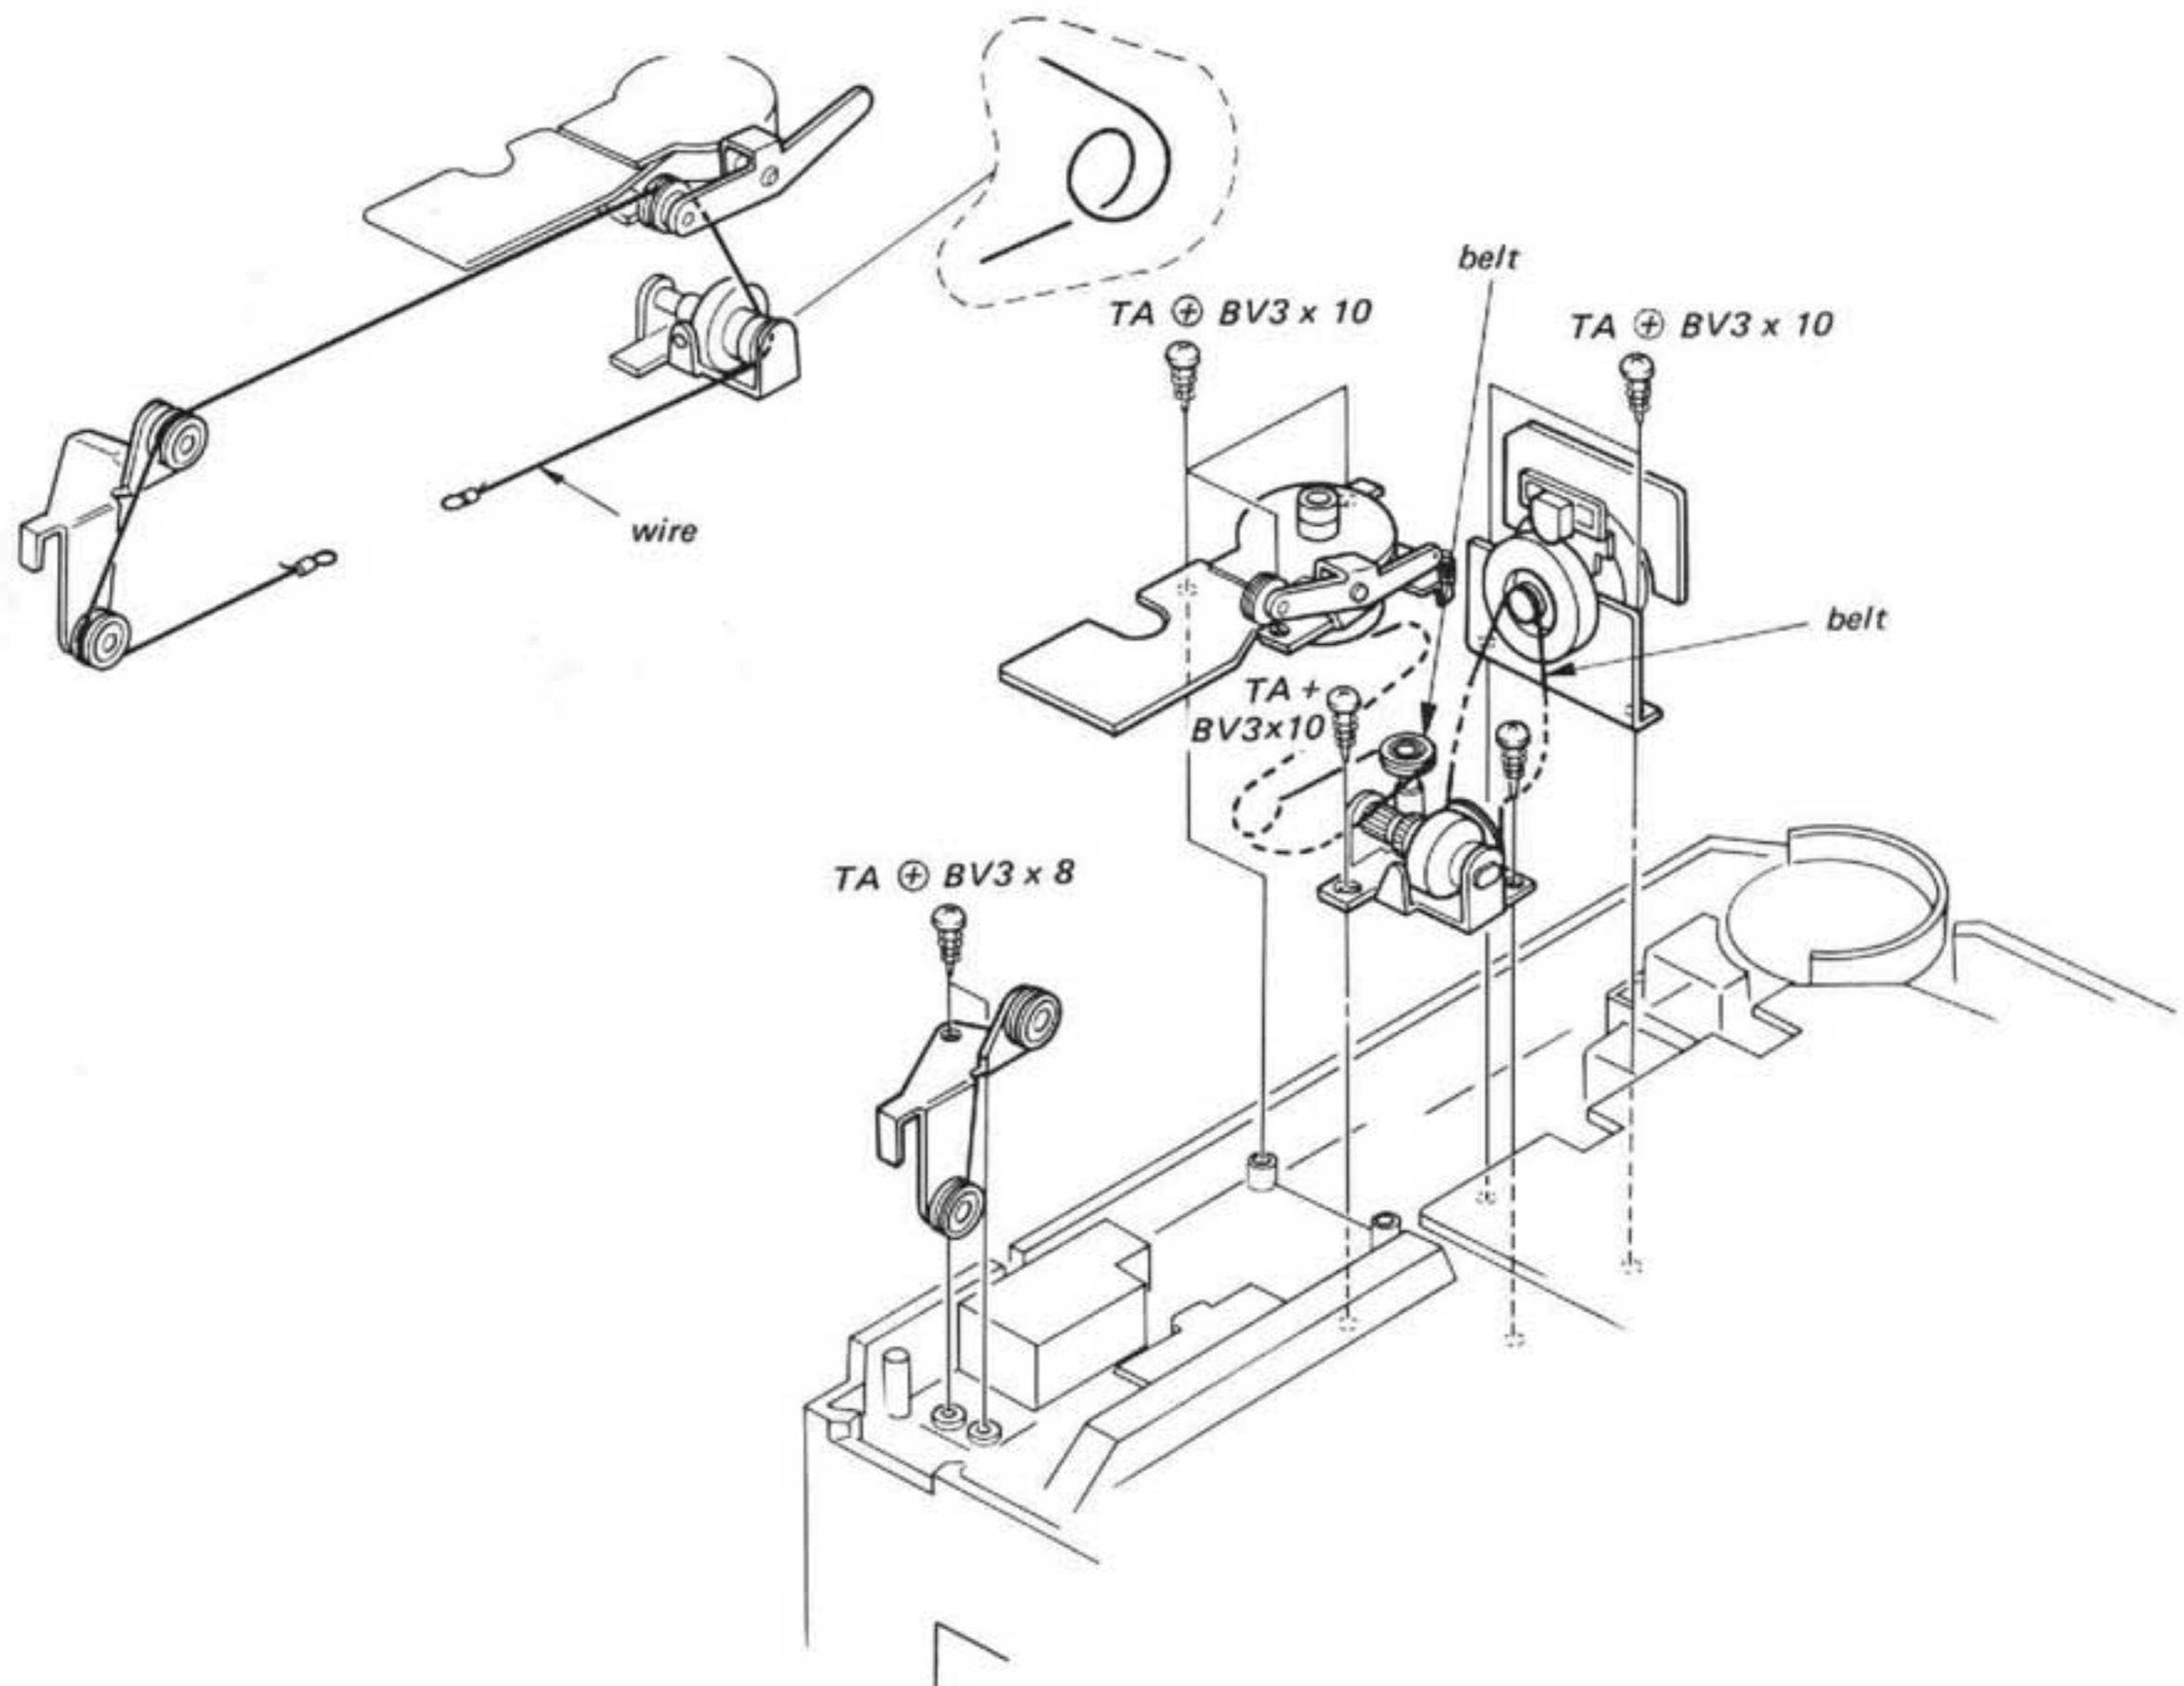

Remove wires and fix them with scotch tape.

Remove inner section of the tonearm.

## HOW TO STRING THE WIRE

## SECTION 3 ADJUSTMENTS

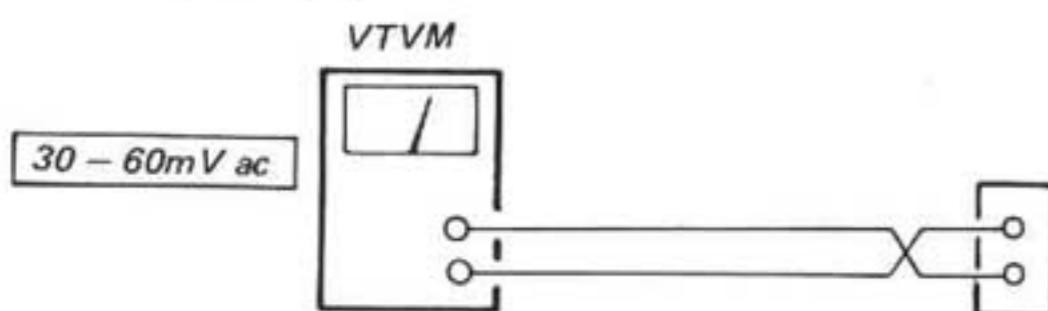

**Output Level Adjustment for Speed Detecting Head  
of Main Motor**

**Setting:**

POWER Switch: ON

SPEED Selector: 33 1/3 rpm

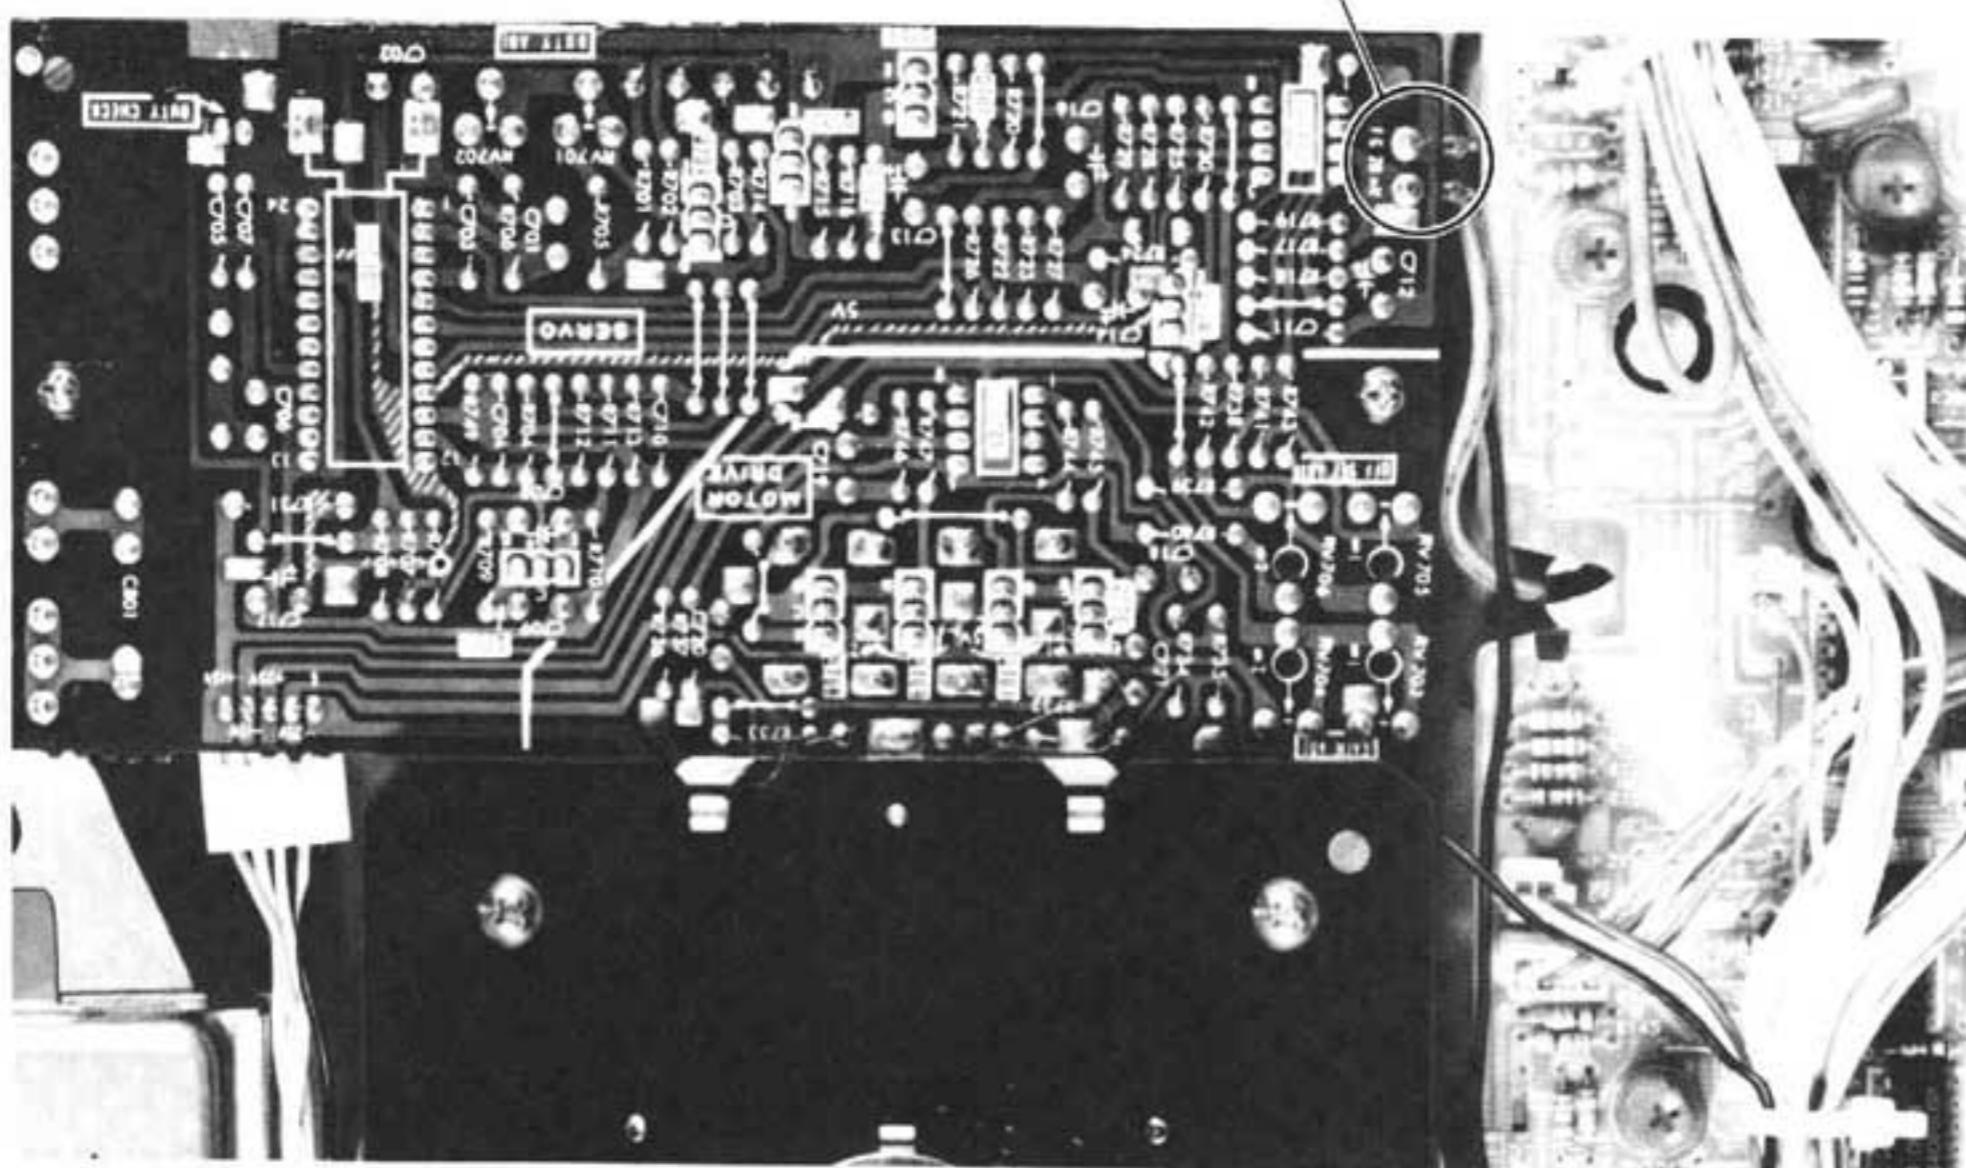

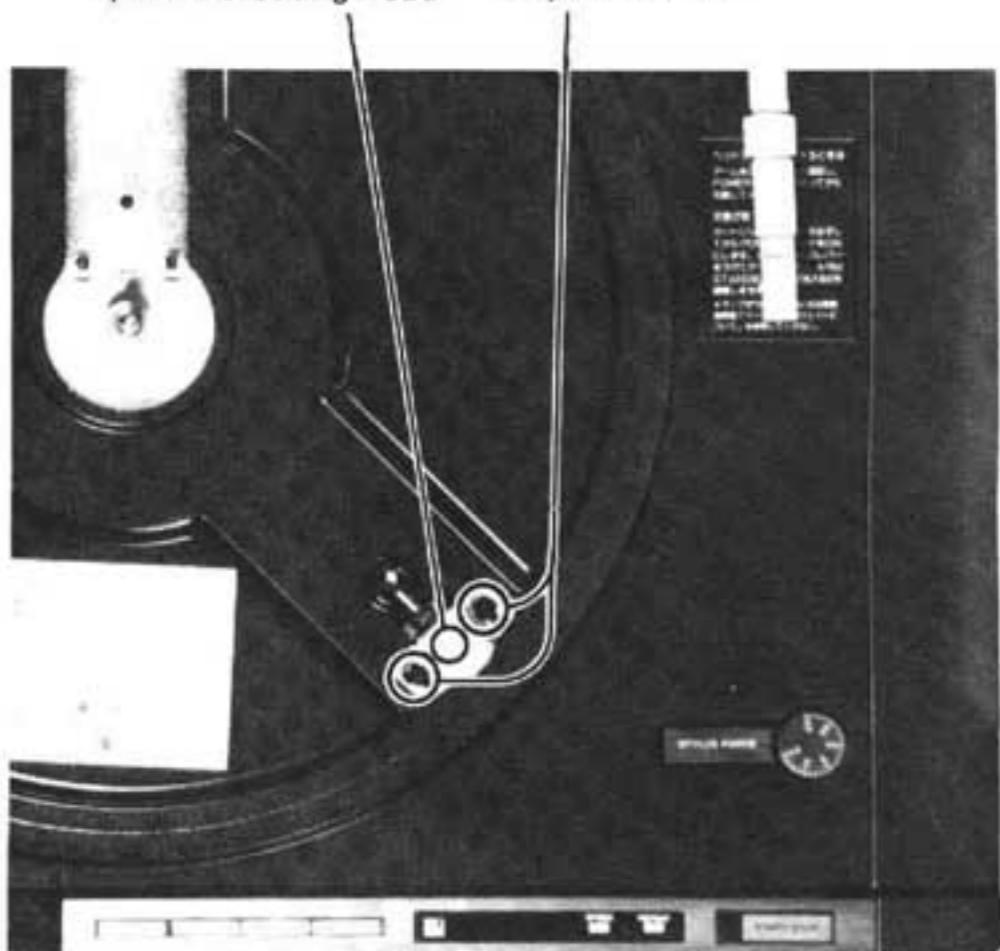

1. Rotate the turntable and adjust the position of the head by loosening the screw so that the voltage at the output terminal of the head is between 30 – 60mV ac.

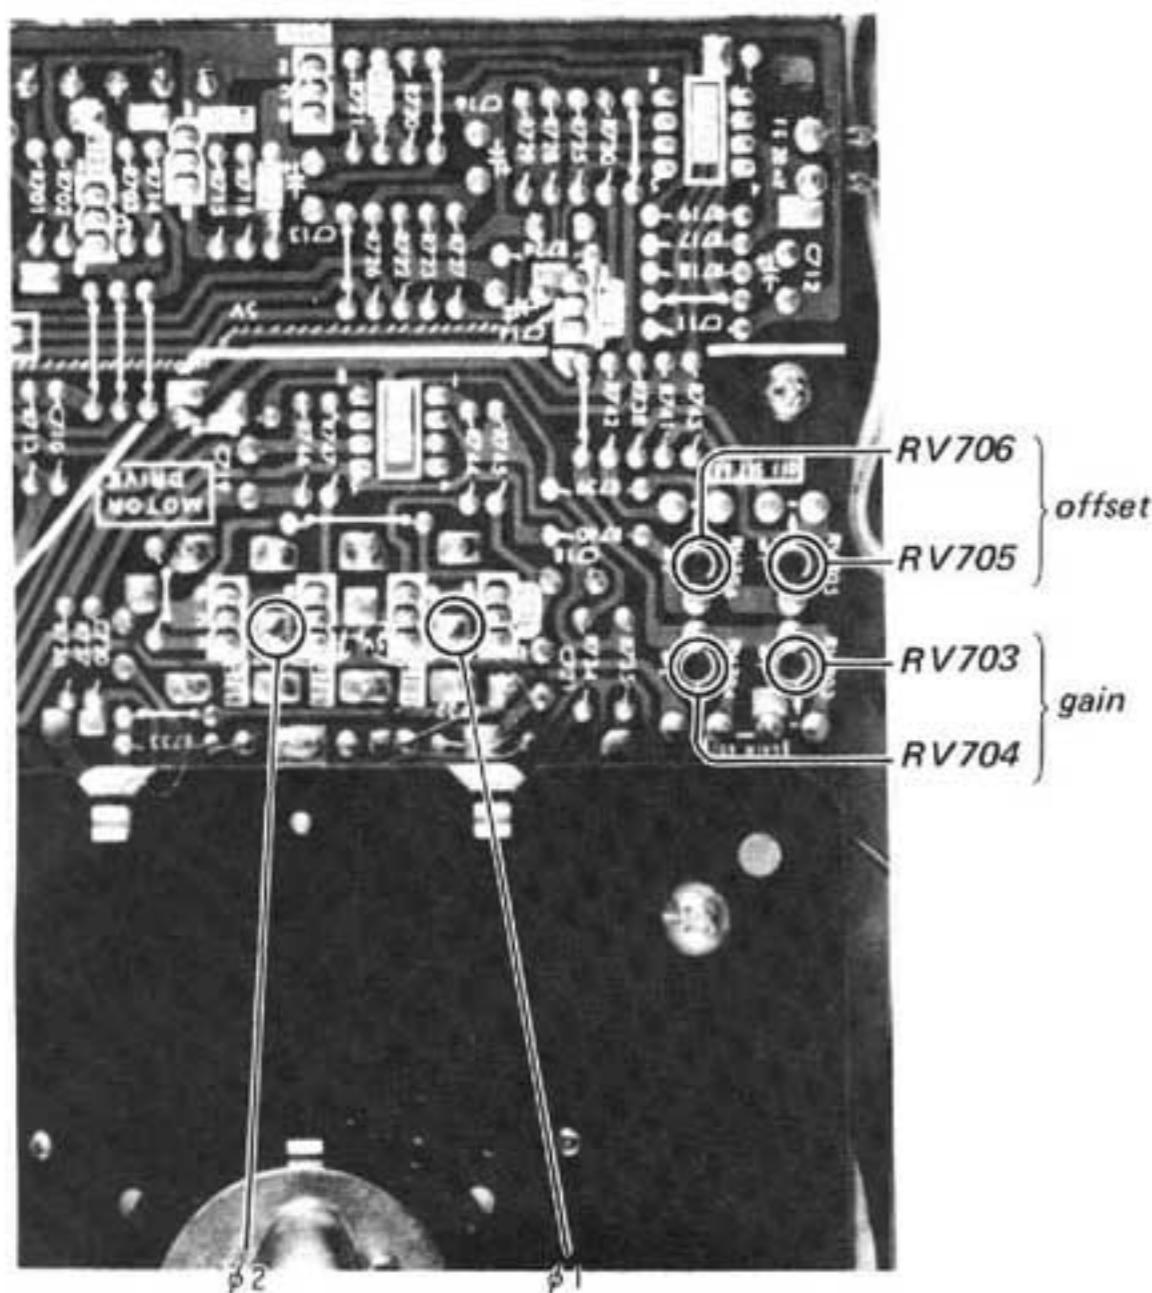

2. Make sure that the head does not touch the turntable.

**Note:** The clearance between the magnet coated rim and the speed detecting head should be more than 0.3mm to avoid wow and flutter.

*speed detecting head TA, BV3 x 10*

### Main Motor Gain/Offset Adjustment

#### Setting:

Mode: STOP

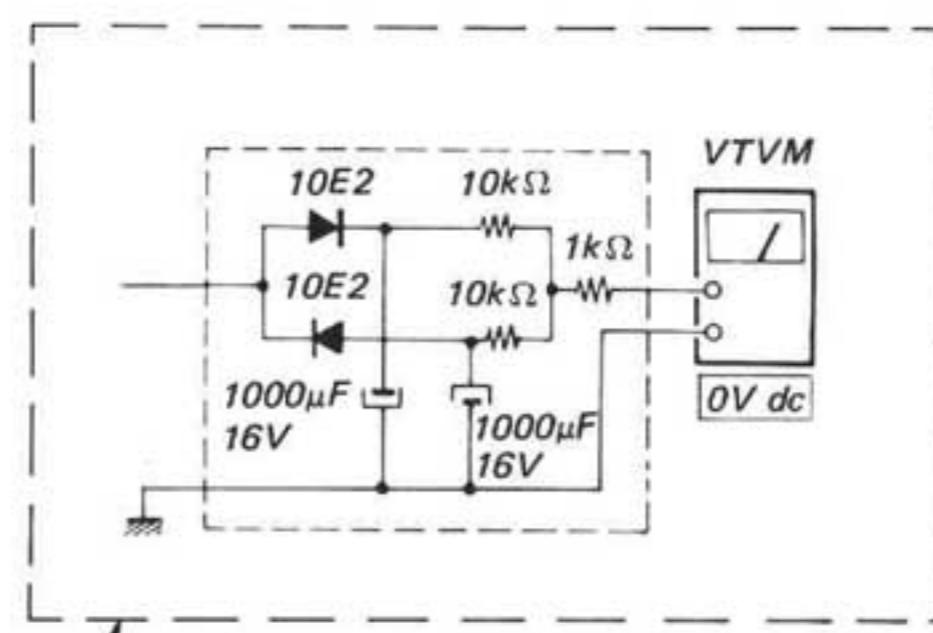

Supply voltage at IC702 ⑤ so that the voltage at IC702 ⑦ is +2V.

#### (Gain Adjustment)

1. Turn the POWER switch on.
2. Adjust RV703, 704 so that the voltage at each emitter of Q706 ( $\phi_1$ ) Q709 ( $\phi$ ) is 5Vp-p.

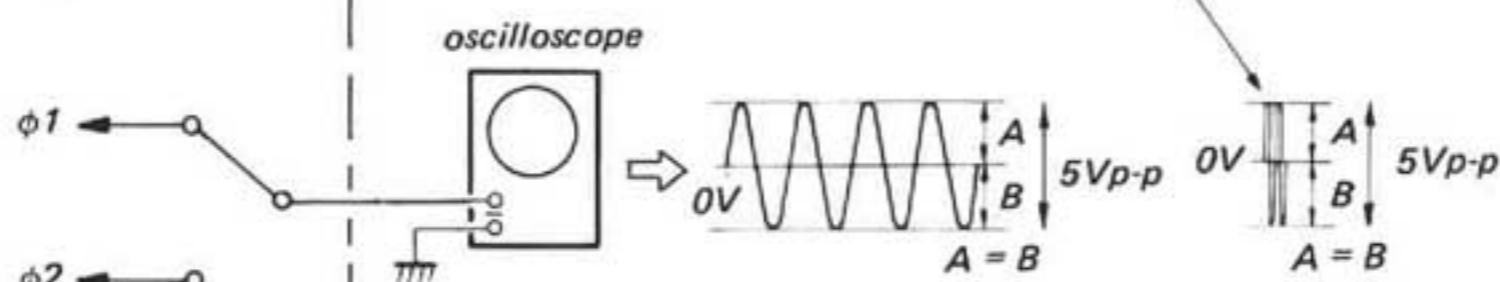

#### (Offset Adjustment)

3. Adjust RV705, 706 so that the waveform at each emitter of Q706 ( $\phi_1$ ) Q709 ( $\phi_2$ ) is as shown below (or reading on the VTVM becomes 0V.)

or:

*Note: Set the sweep time longer for easy waveform checking.*

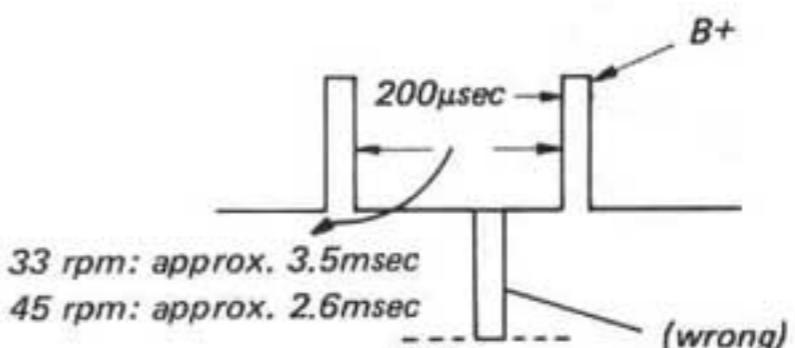

## Main Motor Adjustment

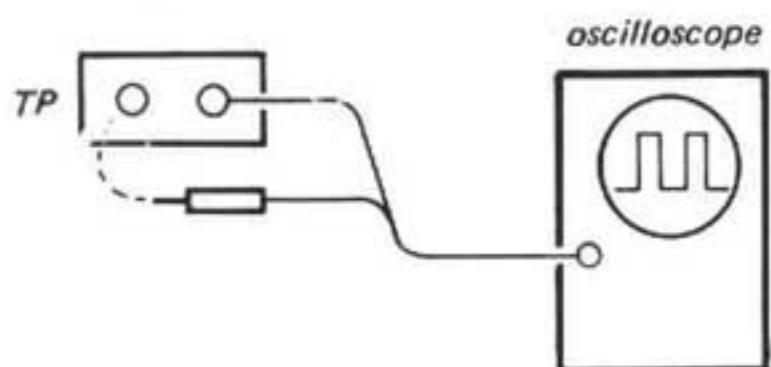

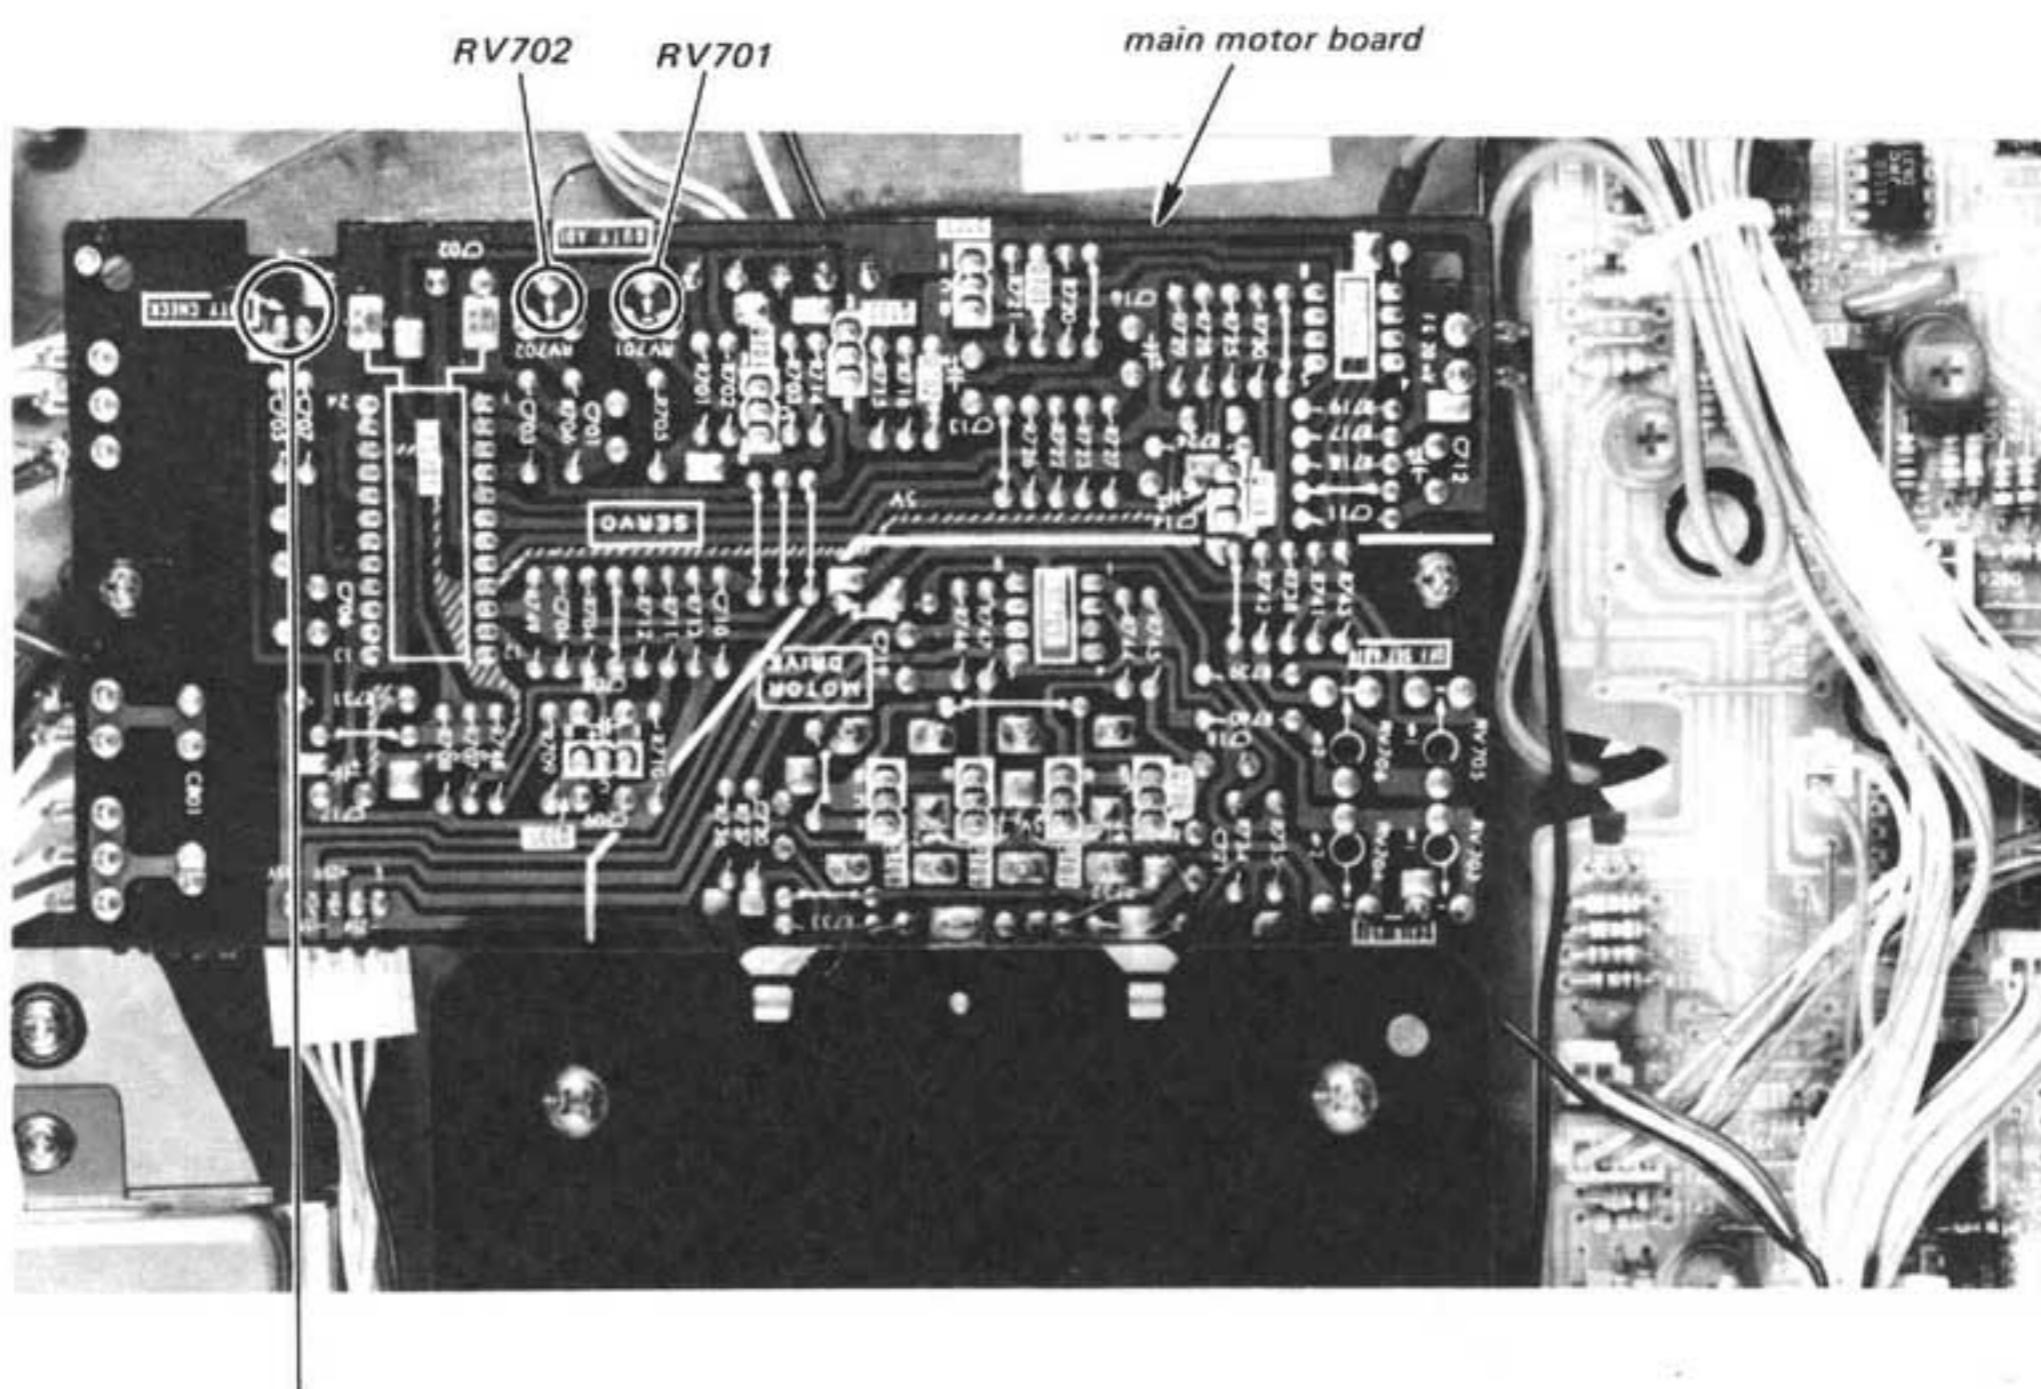

### Setting:

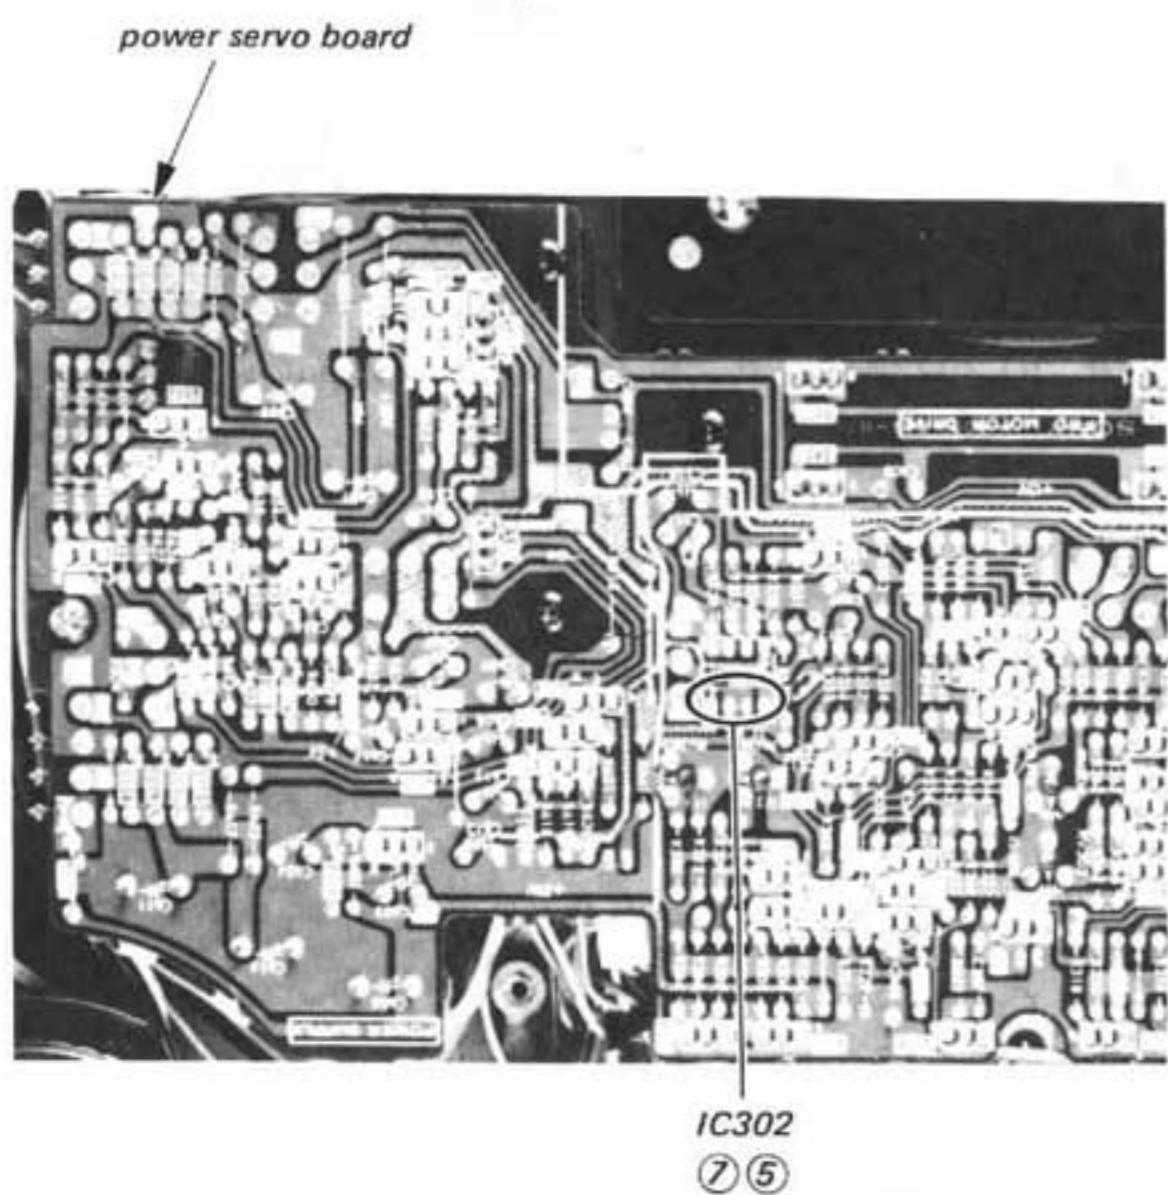

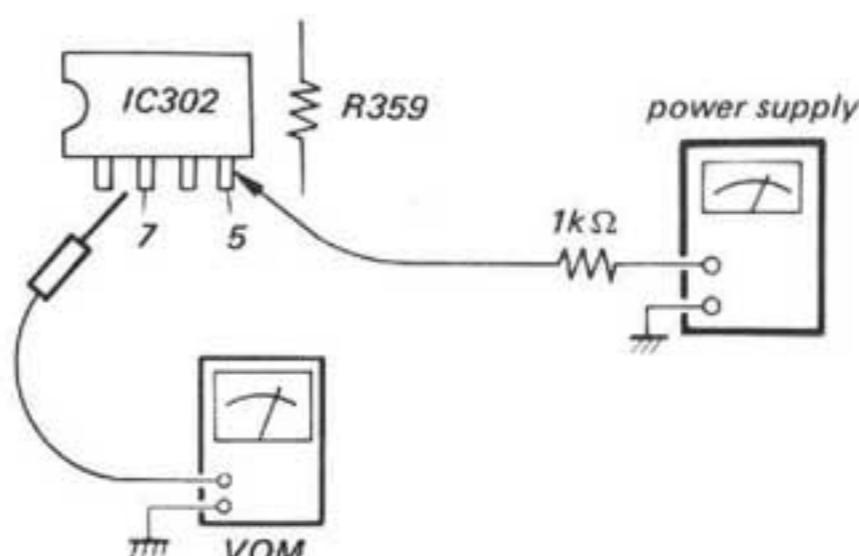

POWER switch: ON

1. Speed Selector: 33 1/3 rpm
2. Adjust RV702 for specified waveform.
3. SPEED Selector: 45 rpm
4. Adjust RV701 for specified waveform.

*Waveform should appear  
at positive side over  $\frac{B^+}{2}$  level.*

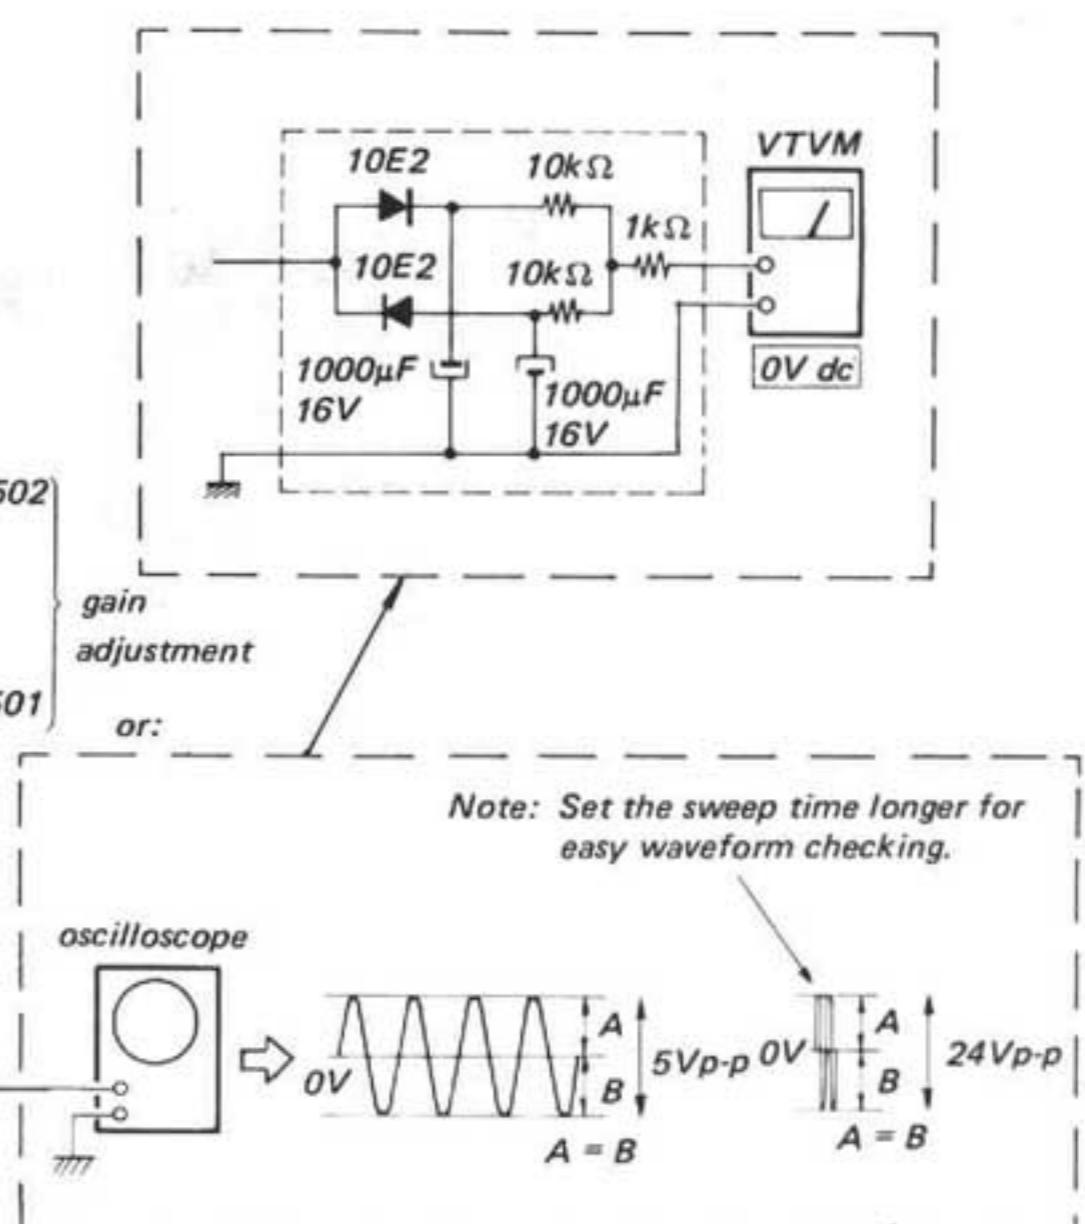

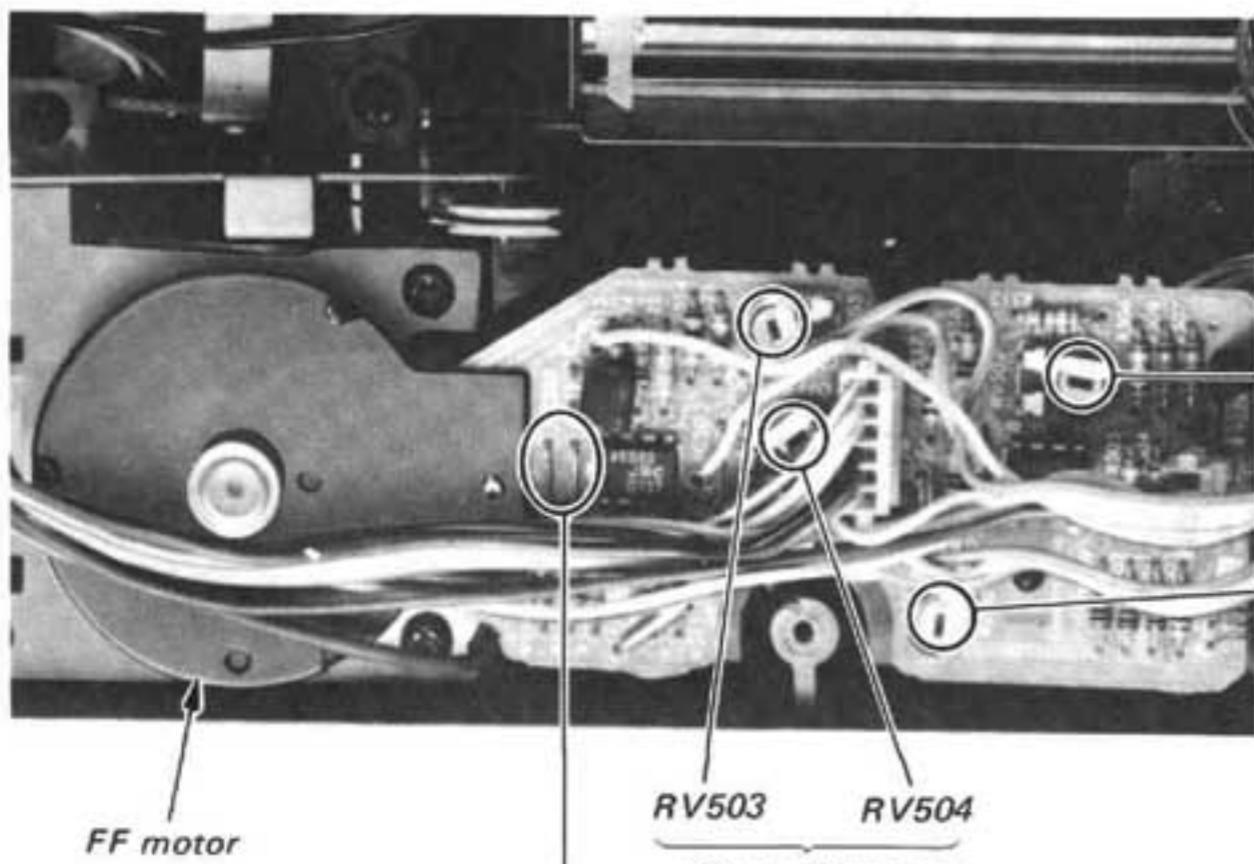

**FF Motor Adjustment****(Gain Adjustment)****— Connection —****Procedure:**

1. Turn POWER switch on.
2. Supply voltage at IC302 (5) of the power servo board so that the voltage at terminal (7) is +10V.
3. Adjust RV501, 502 so that the output to the motor coil is 24Vp-p.

**(Offset Adjustment)**

4. Next, adjust RV503, 504 so that the output to the motor coil is as shown below.

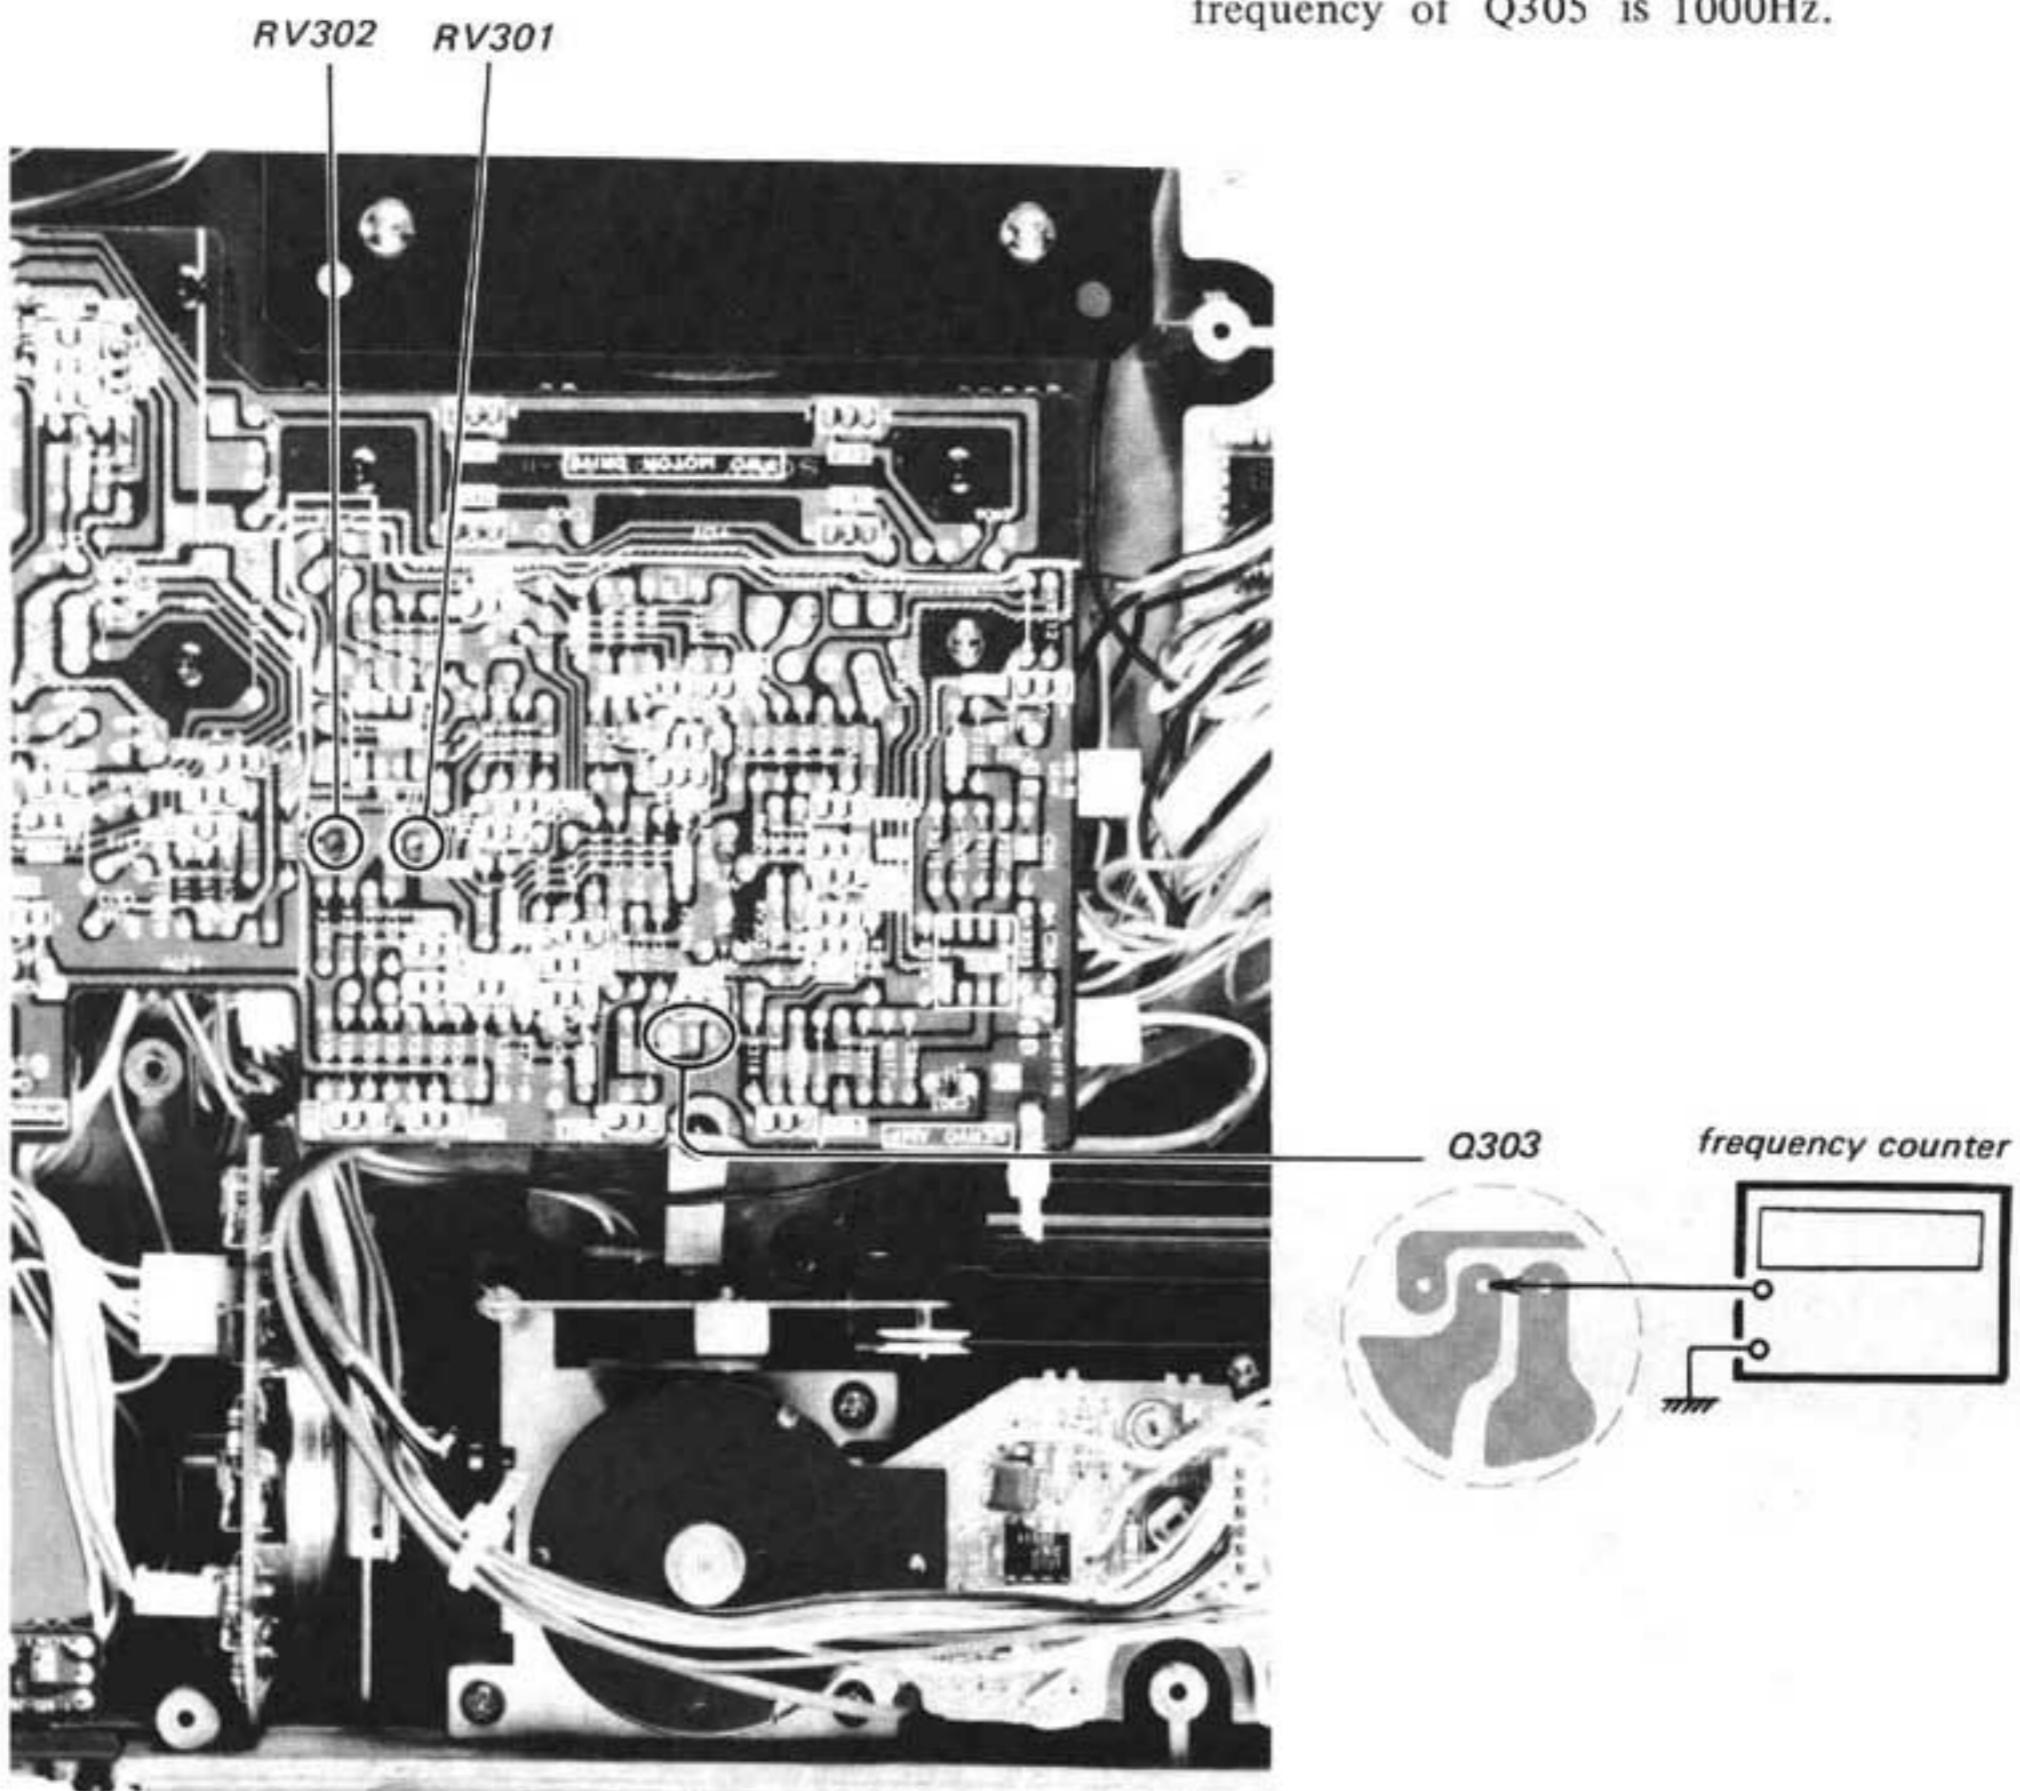

**Speed Adjustment****(FAST FF Speed Adjustment)**

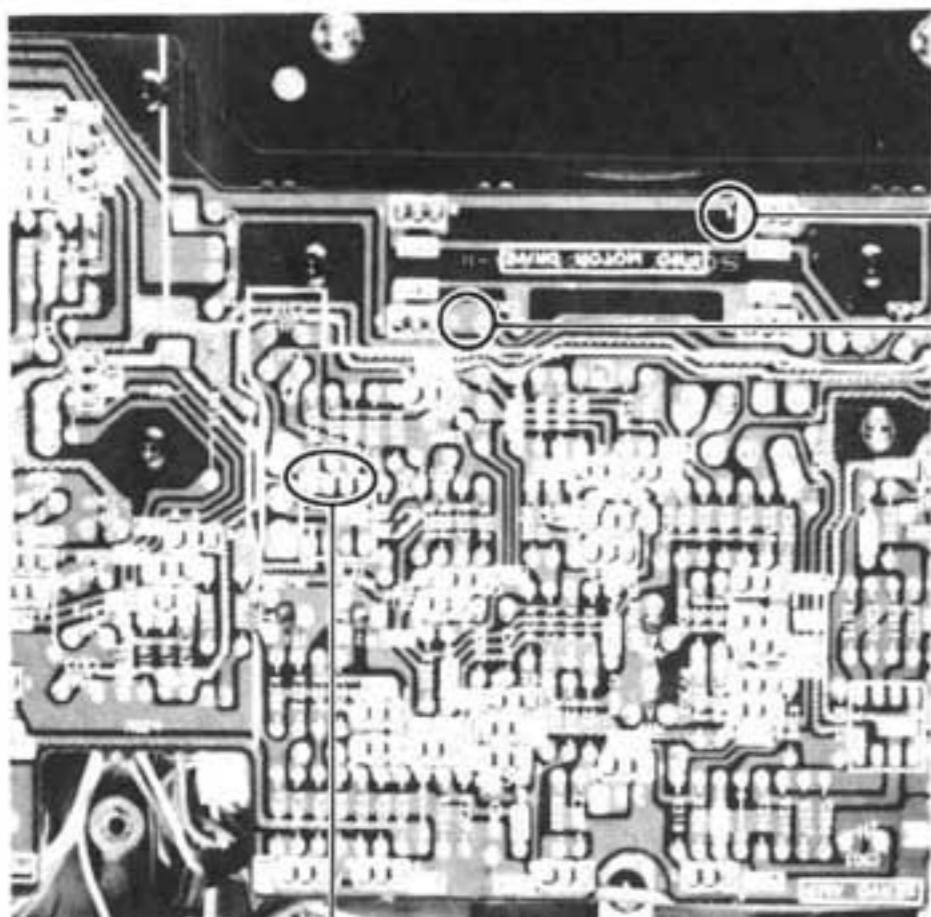

1. Turn the POWER switch on.
2. To move the tonearm, depress both arm direction button [◀] and FAST button.
3. Adjust RV301 so that the collector output frequency of Q303 is 4,000Hz.

**(FF Speed Adjustment)**

4. To move the tonearm inward, depress the arm direction button [◀].
5. Adjust RV302 so that the collector output frequency of Q305 is 1000Hz.

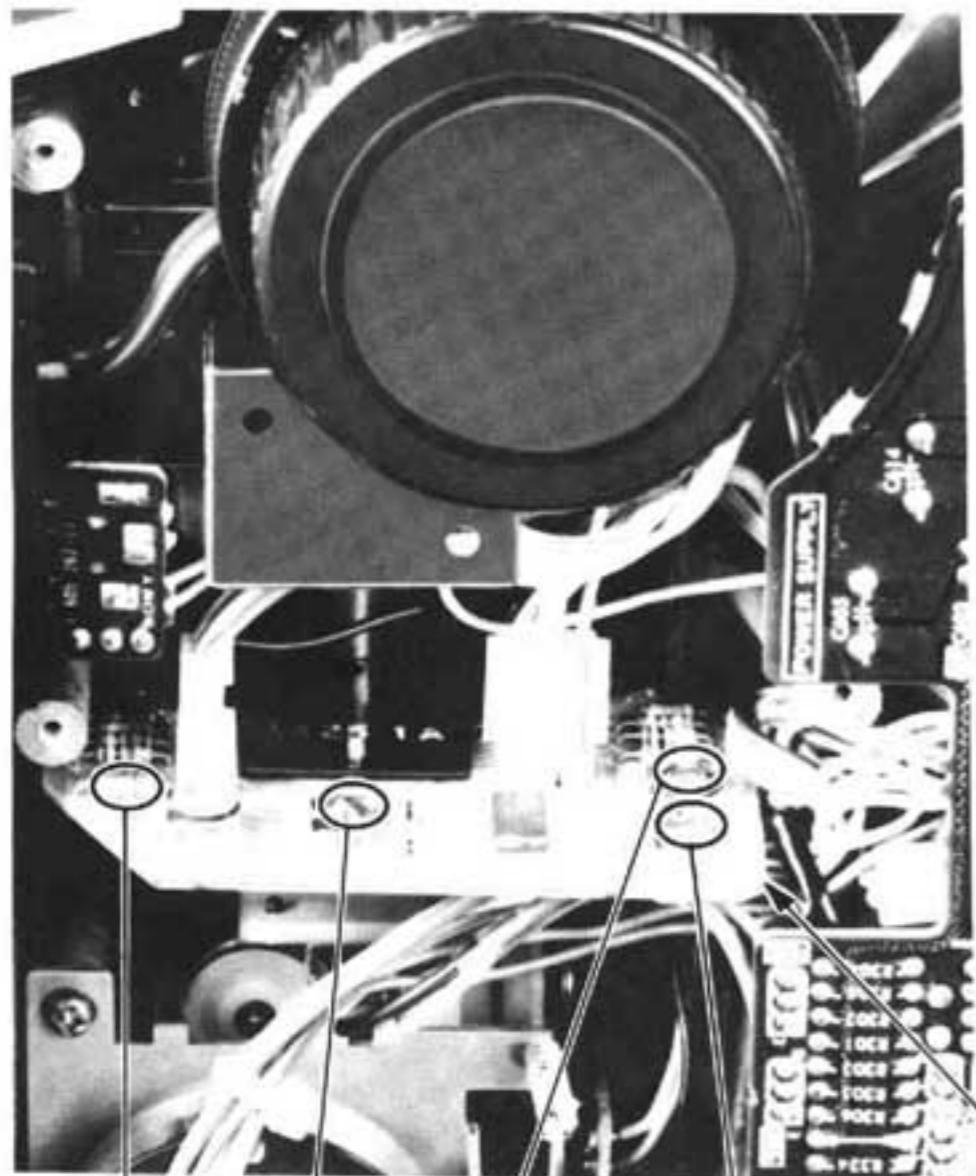

## Forward Motor Adjustment

IC302 ① ③

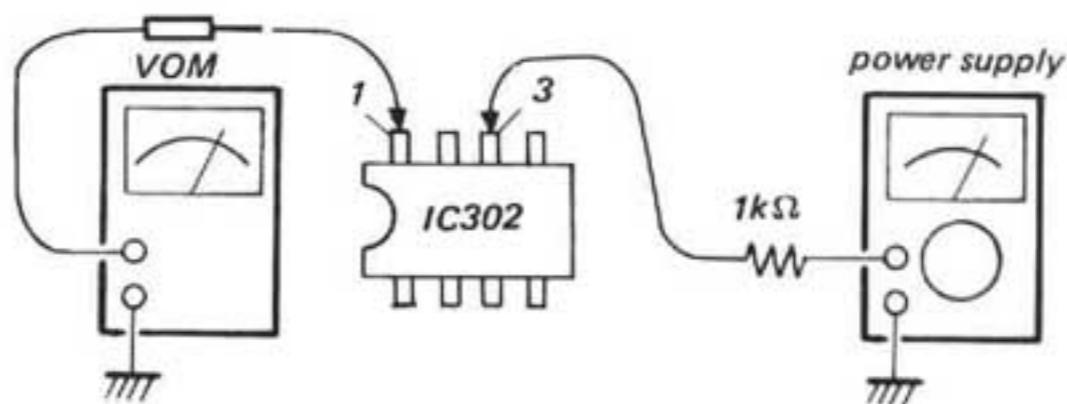

output to motor coil

RV401 RV404 RV403 RV402

## (Gain Adjustment)

## — Connection —

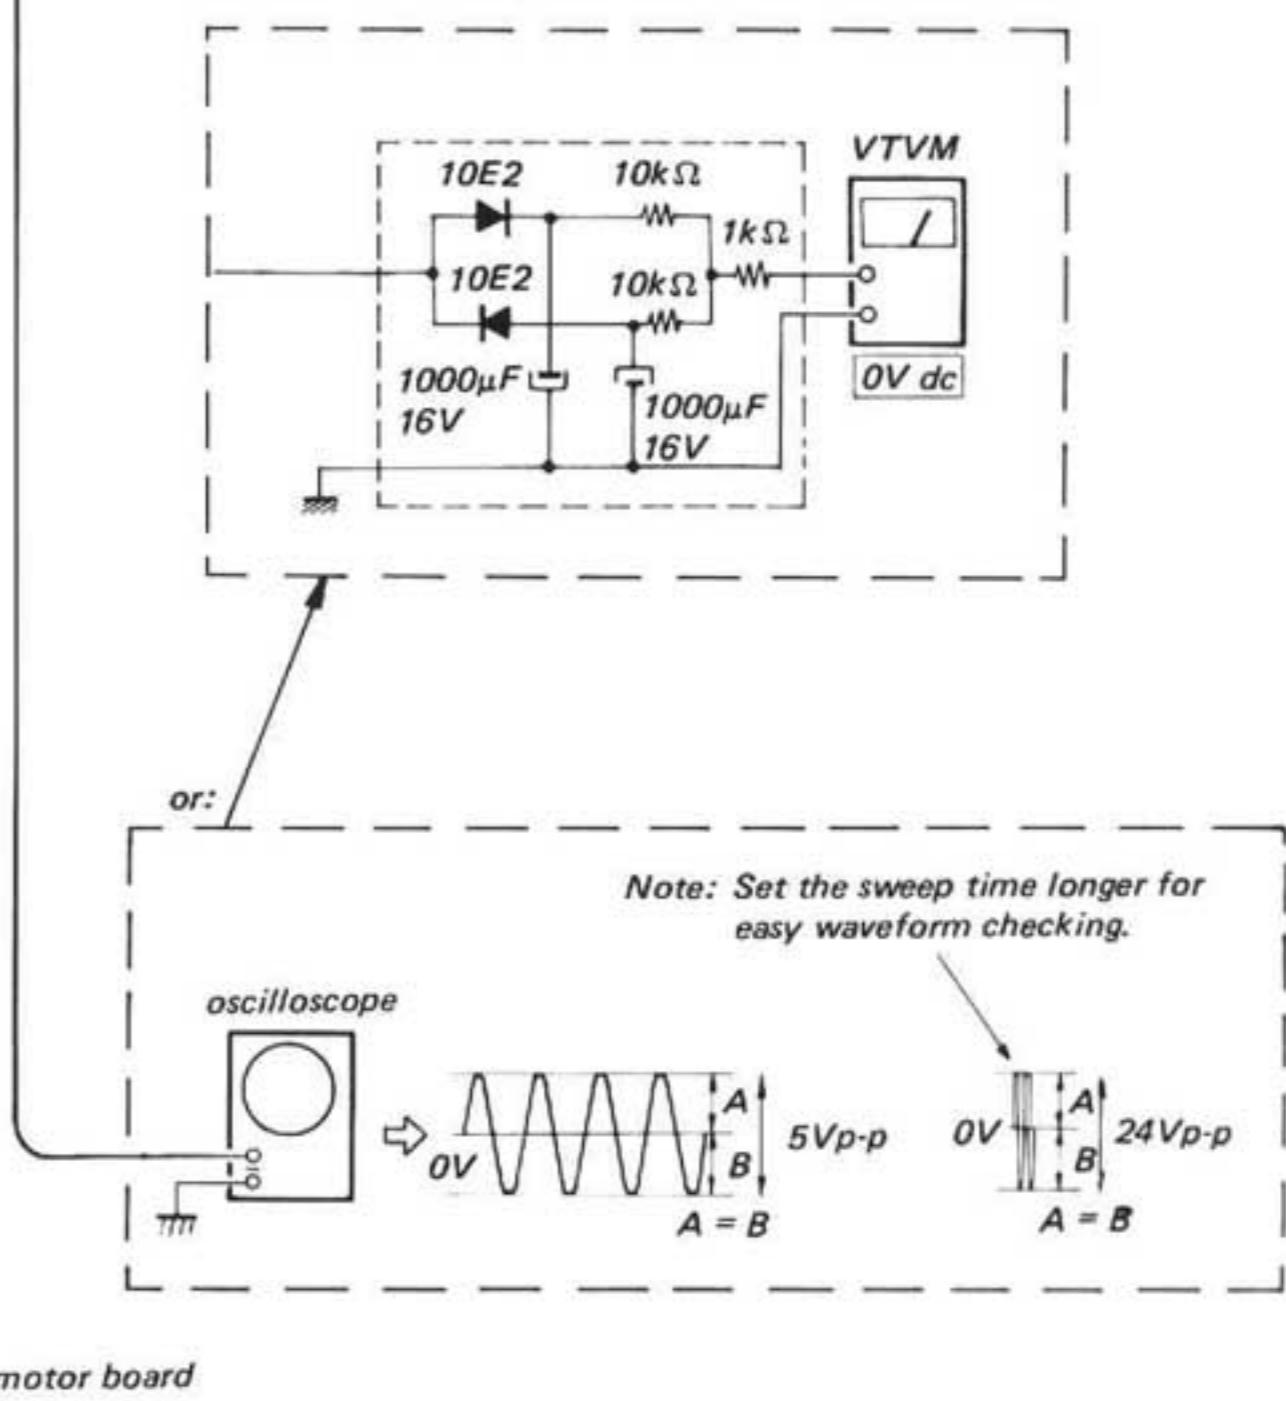

## Procedure:

1. Turn the POWER switch on.
2. Supply voltage to IC302 ③ of power servo board so that the voltage at IC302 ① is +10V.
3. Adjust RV401, 402 so that the output to the motor coil is 24Vp-p.

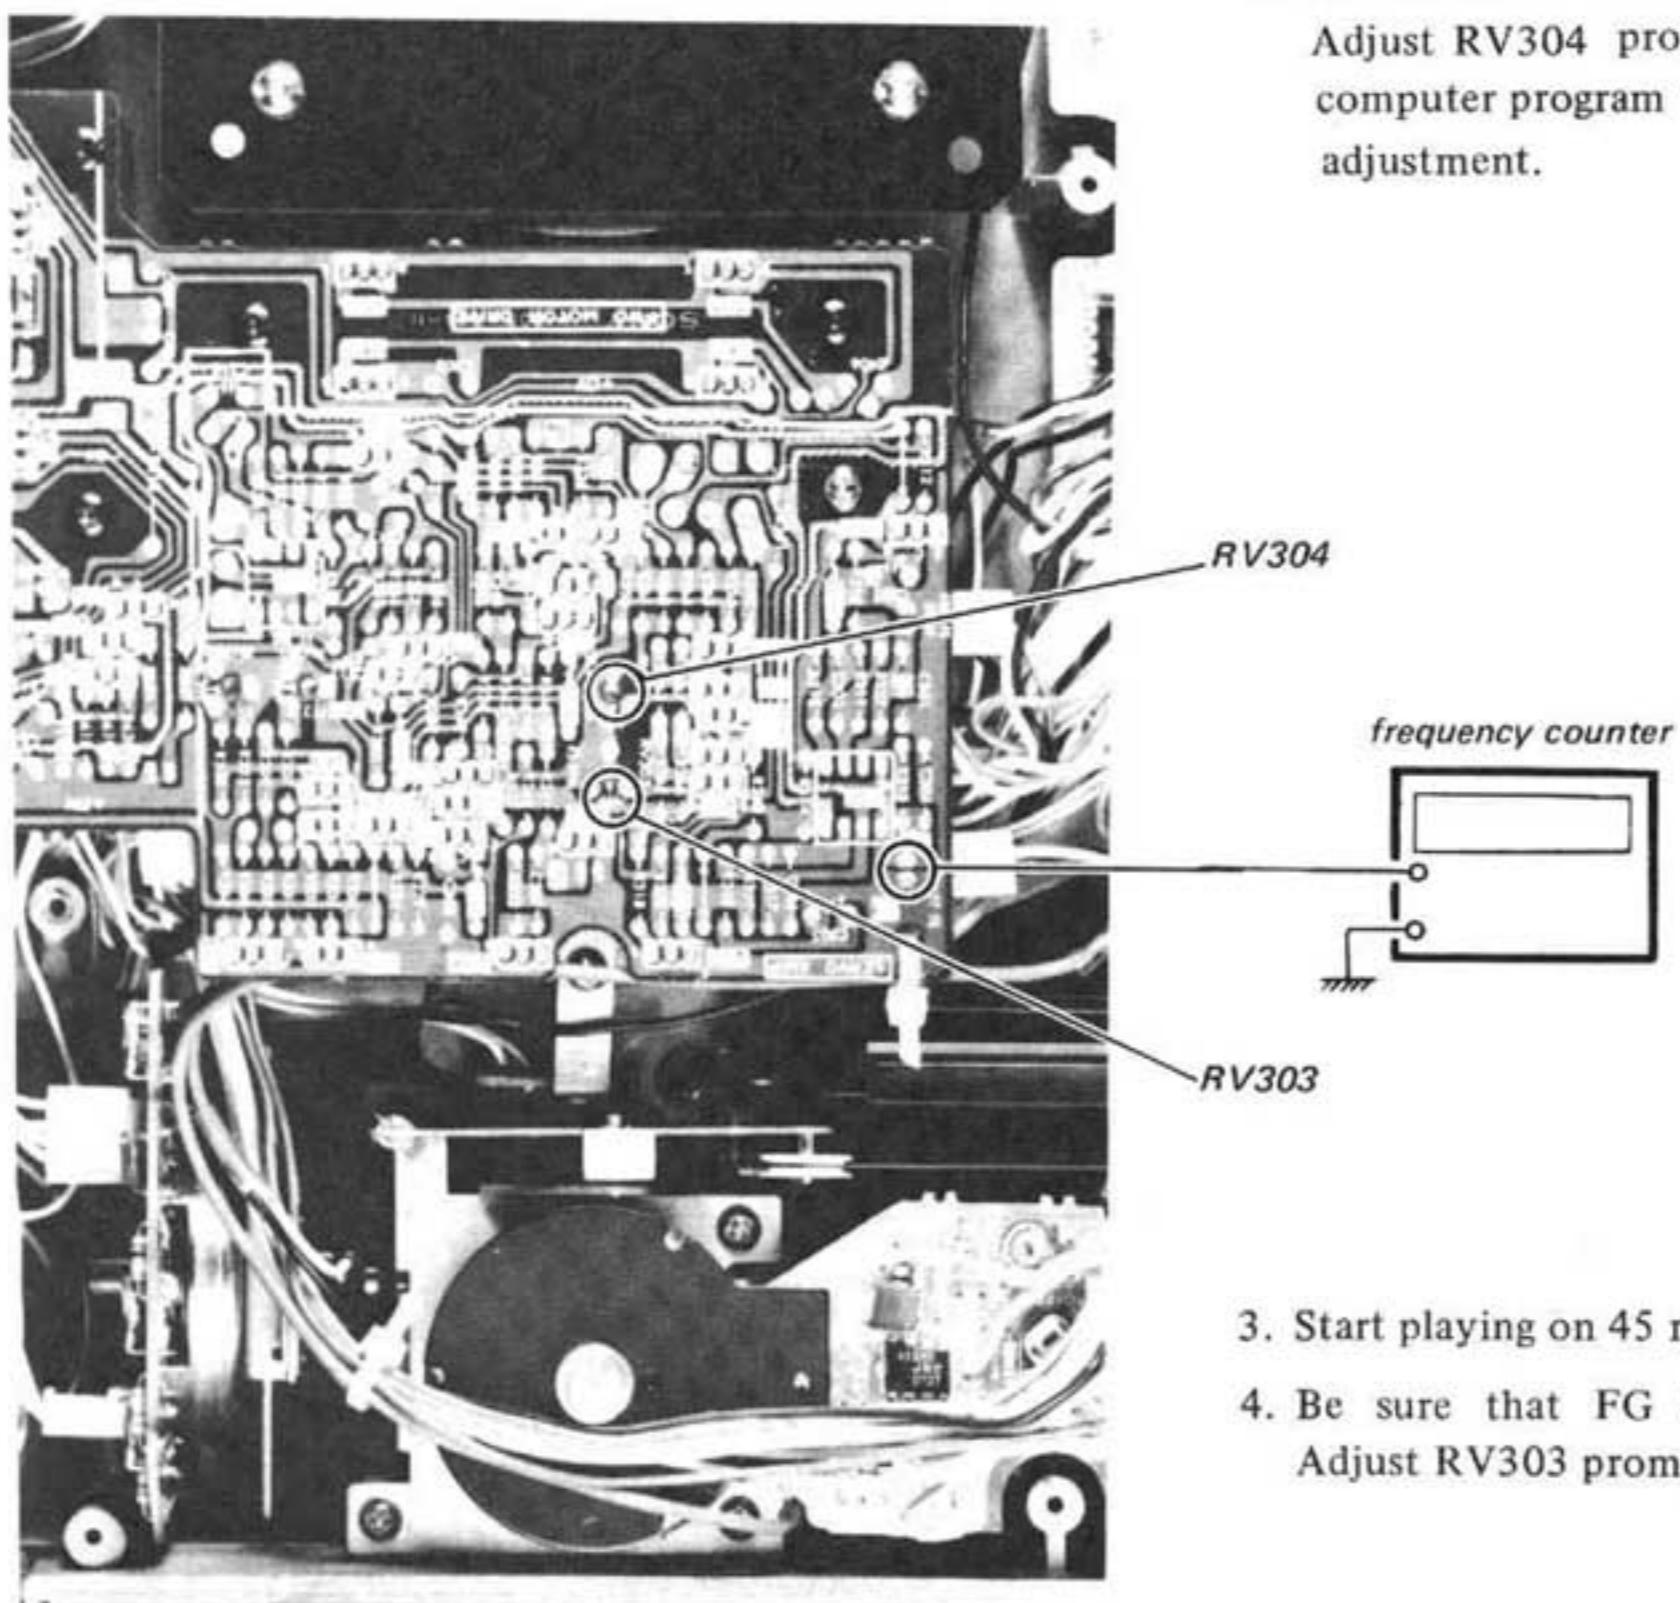

## (Offset Adjustment)

4. Adjust RV403, 404 so that output to the motor coil is as shown below.

**Forward Speed Adjustment**

1. Start playing on 33 rpm.
2. Be sure that FG output frequency is 100Hz.  
Adjust RV304 promptly to avoid changing the computer program or moving the tonearm by adjustment.

3. Start playing on 45 rpm.
4. Be sure that FG output frequency is 150Hz.  
Adjust RV303 promptly.

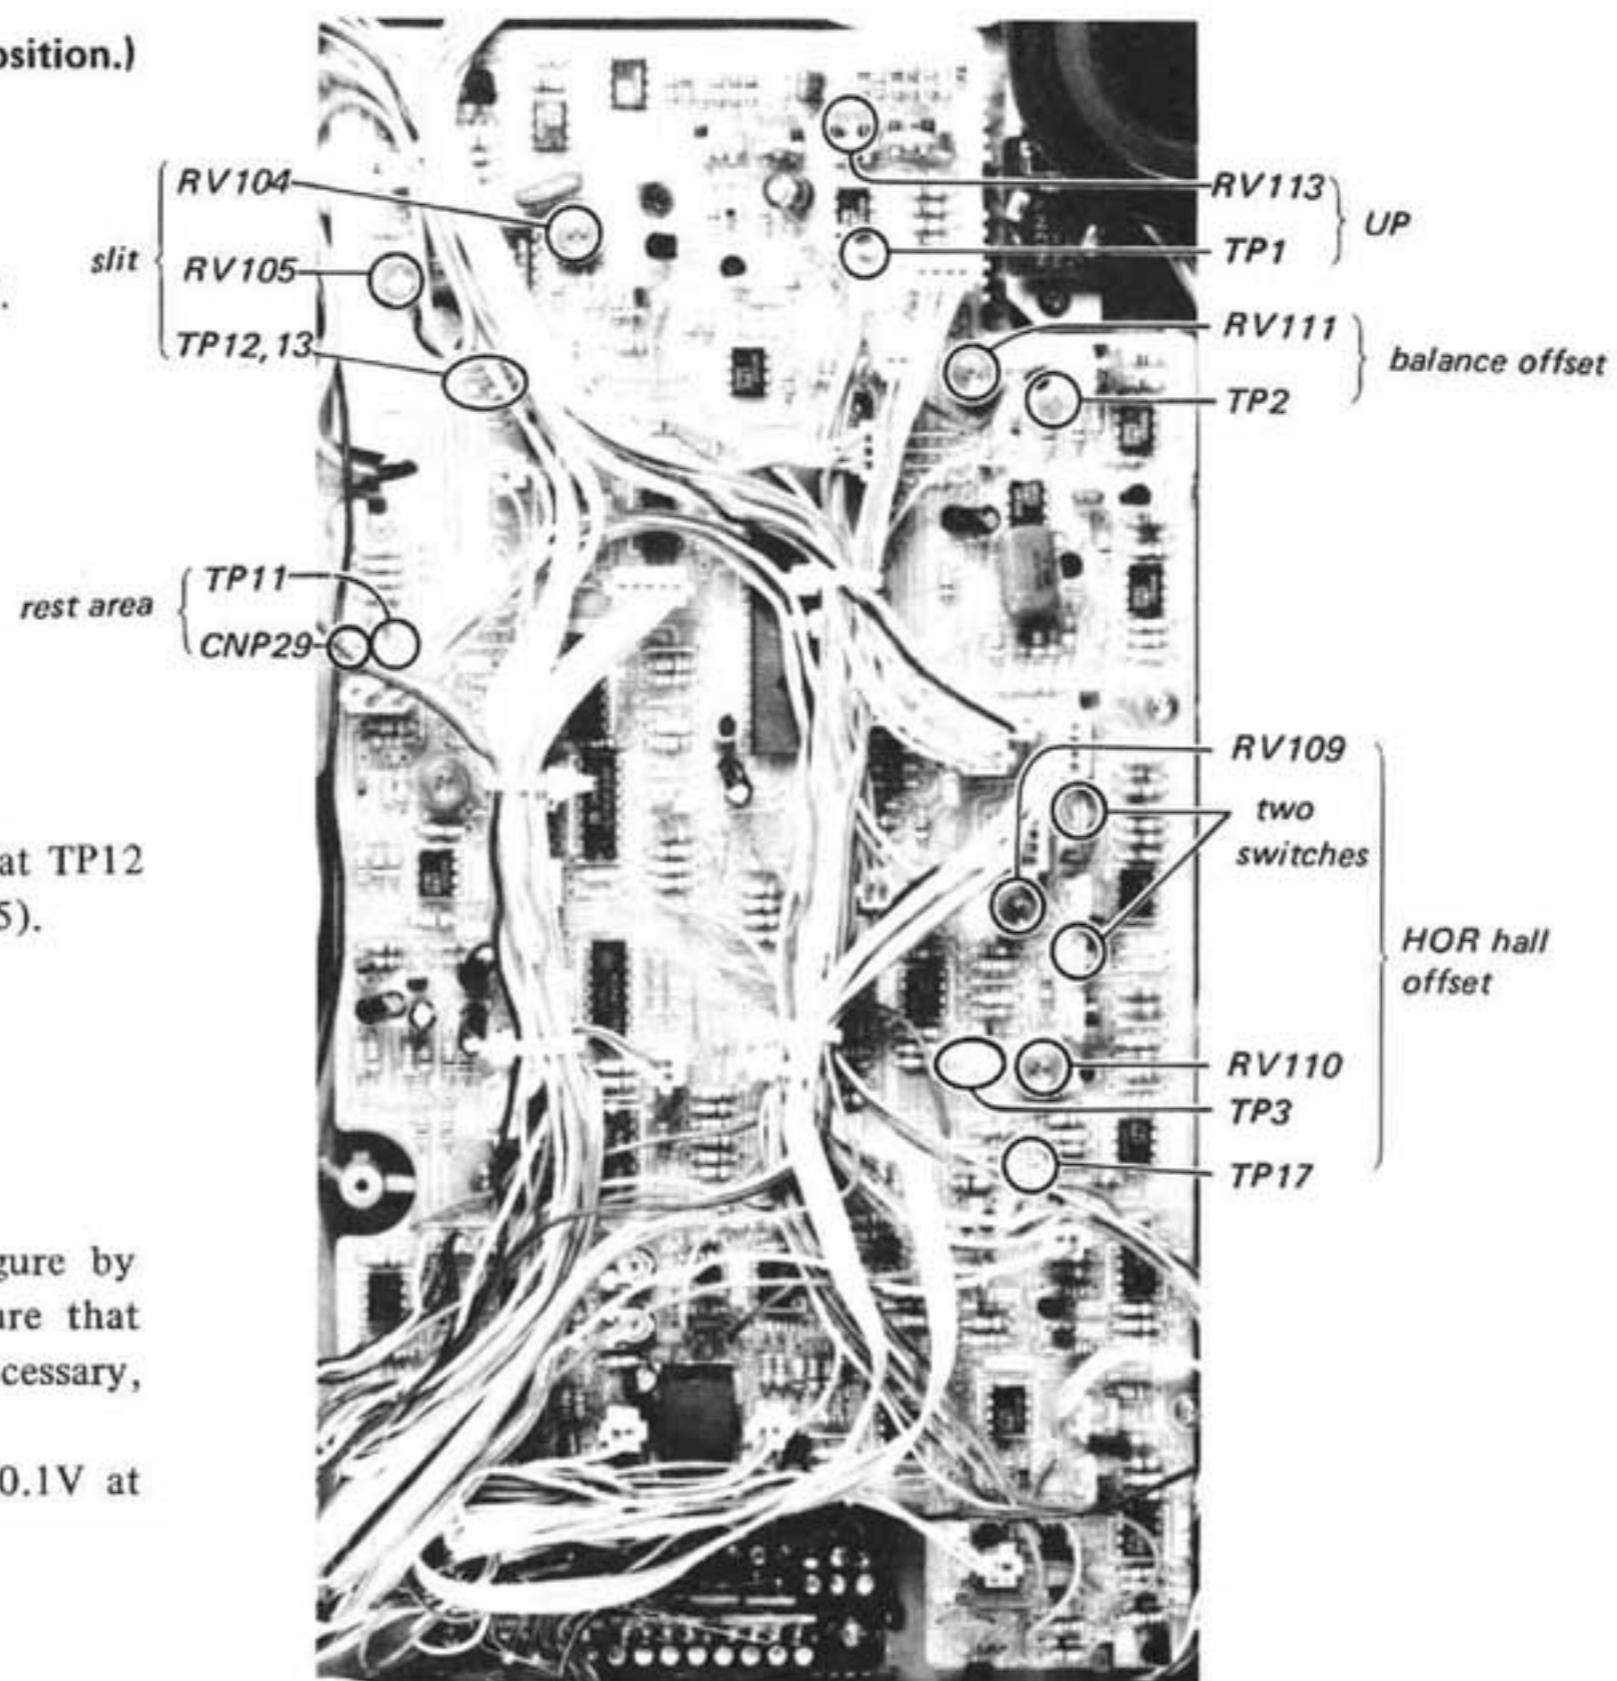

## System Control Adjustment

— with the turntable removed —

(The set can be adjusted in upside down position.)

### (Rest Area Adjustment)

1. Turn the POWER switch on.  
Set the tonearm out of the rest area.
2. Adjust RV106 so that level at TP11 is -5V.

### (Slit Adjustment)

1. Turn the POWER switch on.
2. Move the tonearm back and forth by hand.
3. Make sure that 50% square wave appears at TP12 (TP13). If necessary, adjust RV104 (RV105).

### (HOR Hall Element Offset Adjustment)

1. Turn the POWER switch on.
2. Turn off two switches shown in the figure by turning them counterclockwise. Make sure that output of IC107 is  $0 \pm 10\text{mV}$  at TP3. If necessary, adjust RV109.
3. Next, make sure that the voltage is  $0 \pm 0.1\text{V}$  at TP17. If necessary, adjust RV110.

**Note:** Turn the switch on when the adjustment is completed.

### (Balance Circuit Offset Adjustment)

1. Turn the power switch on.
2. Turn off two switches shown in the figure by turning them clockwise.
3. Set the tonearm in the rest area and make sure that level at TP2 is  $0 \pm 10\text{mV}$ . If necessary, adjust RV111.

### (Up Adjustment)

1. Turn the POWER switch on.
2. Put the tonearm on the arm rest and push it upwards when the set is at normal position. When the set is positioned upside down, push it downwards.  
Make sure that the voltage is  $+0.1\text{V}$  at TP1. If necessary, adjust RV113.

— with the set in normal position —  
(either with the turntable removed or not)  
**(HOR Angle Adjustment)**

1. Turn the POWER switch on.
2. Make sure that the tonearm is at a right angle to the slide bar and that voltage at TP17 is 0V. If necessary, adjust RV108 while holding the tonearm by hand.

**(HOR Tonearm Detection Adjustment)**

3. Next move the stylus tip 0.5mm inward (that is, to the left). Make sure that voltage at TP17 is -10V. If necessary, adjust RV107.

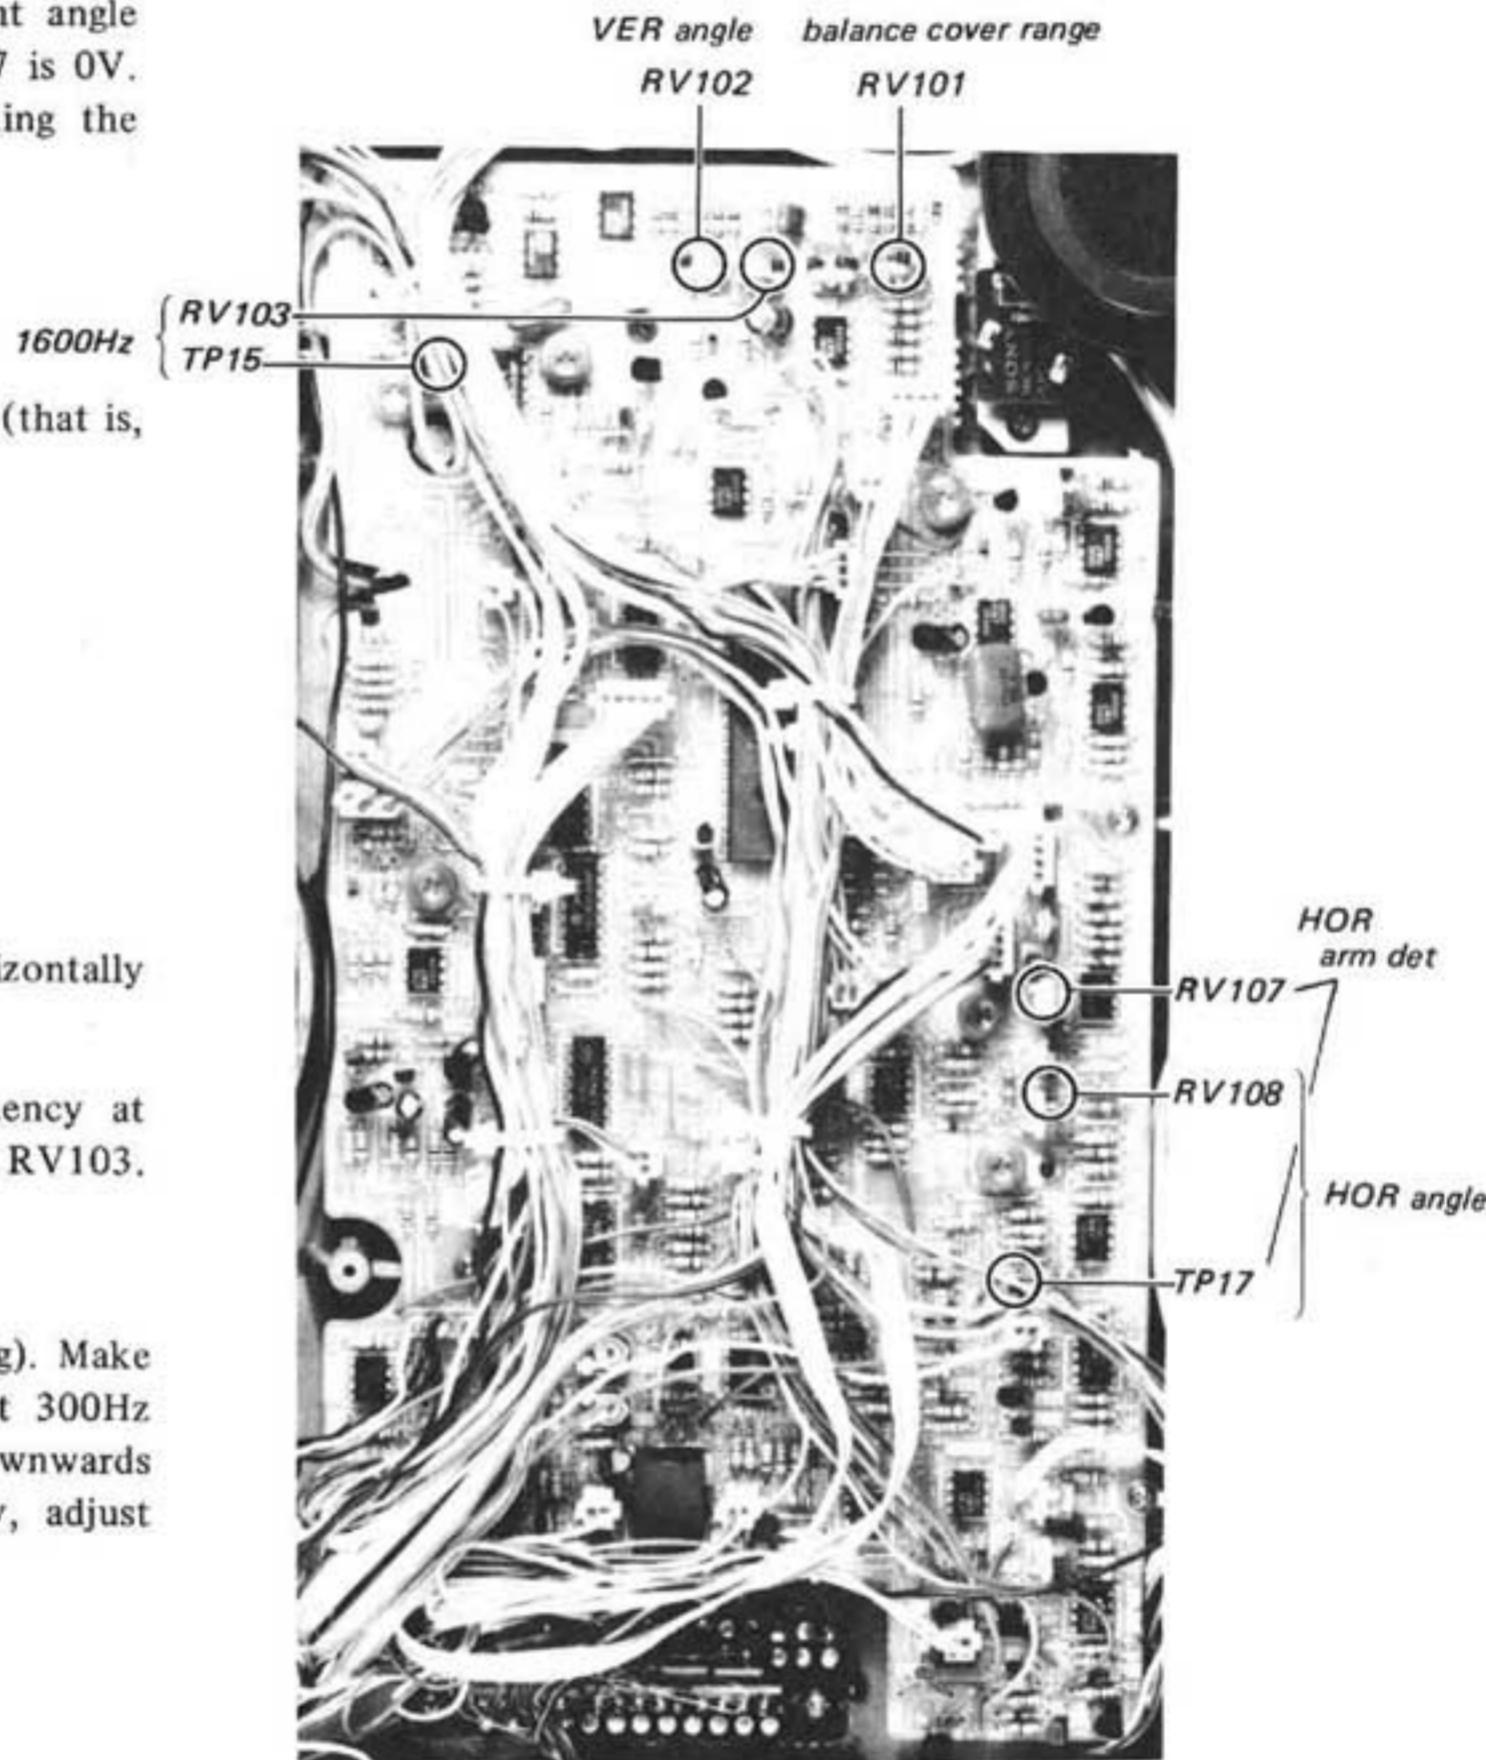

**(Vertical Angle Adjustment)**

cartridge shell weight: 7.2g

1. Place extra weight of 3g on the shell.
2. Turn the POWER switch on.
3. Adjust RV102 so that the tonearm is horizontally balanced.
4. When the tonearm is horizontal, frequency at TP15 is 1600Hz. If necessary, adjust RV103.

**(Tonearm Balance Cover Range Adjustment)**

Place extra weight of 9g on the shell (7.2g). Make sure that the frequency at TP15 is about 300Hz and that the tonearm drops 1 – 2mm downwards from its horizontal position. If necessary, adjust RV101.

— with the set operating normally —

**(Zero Balance Adjustment)**

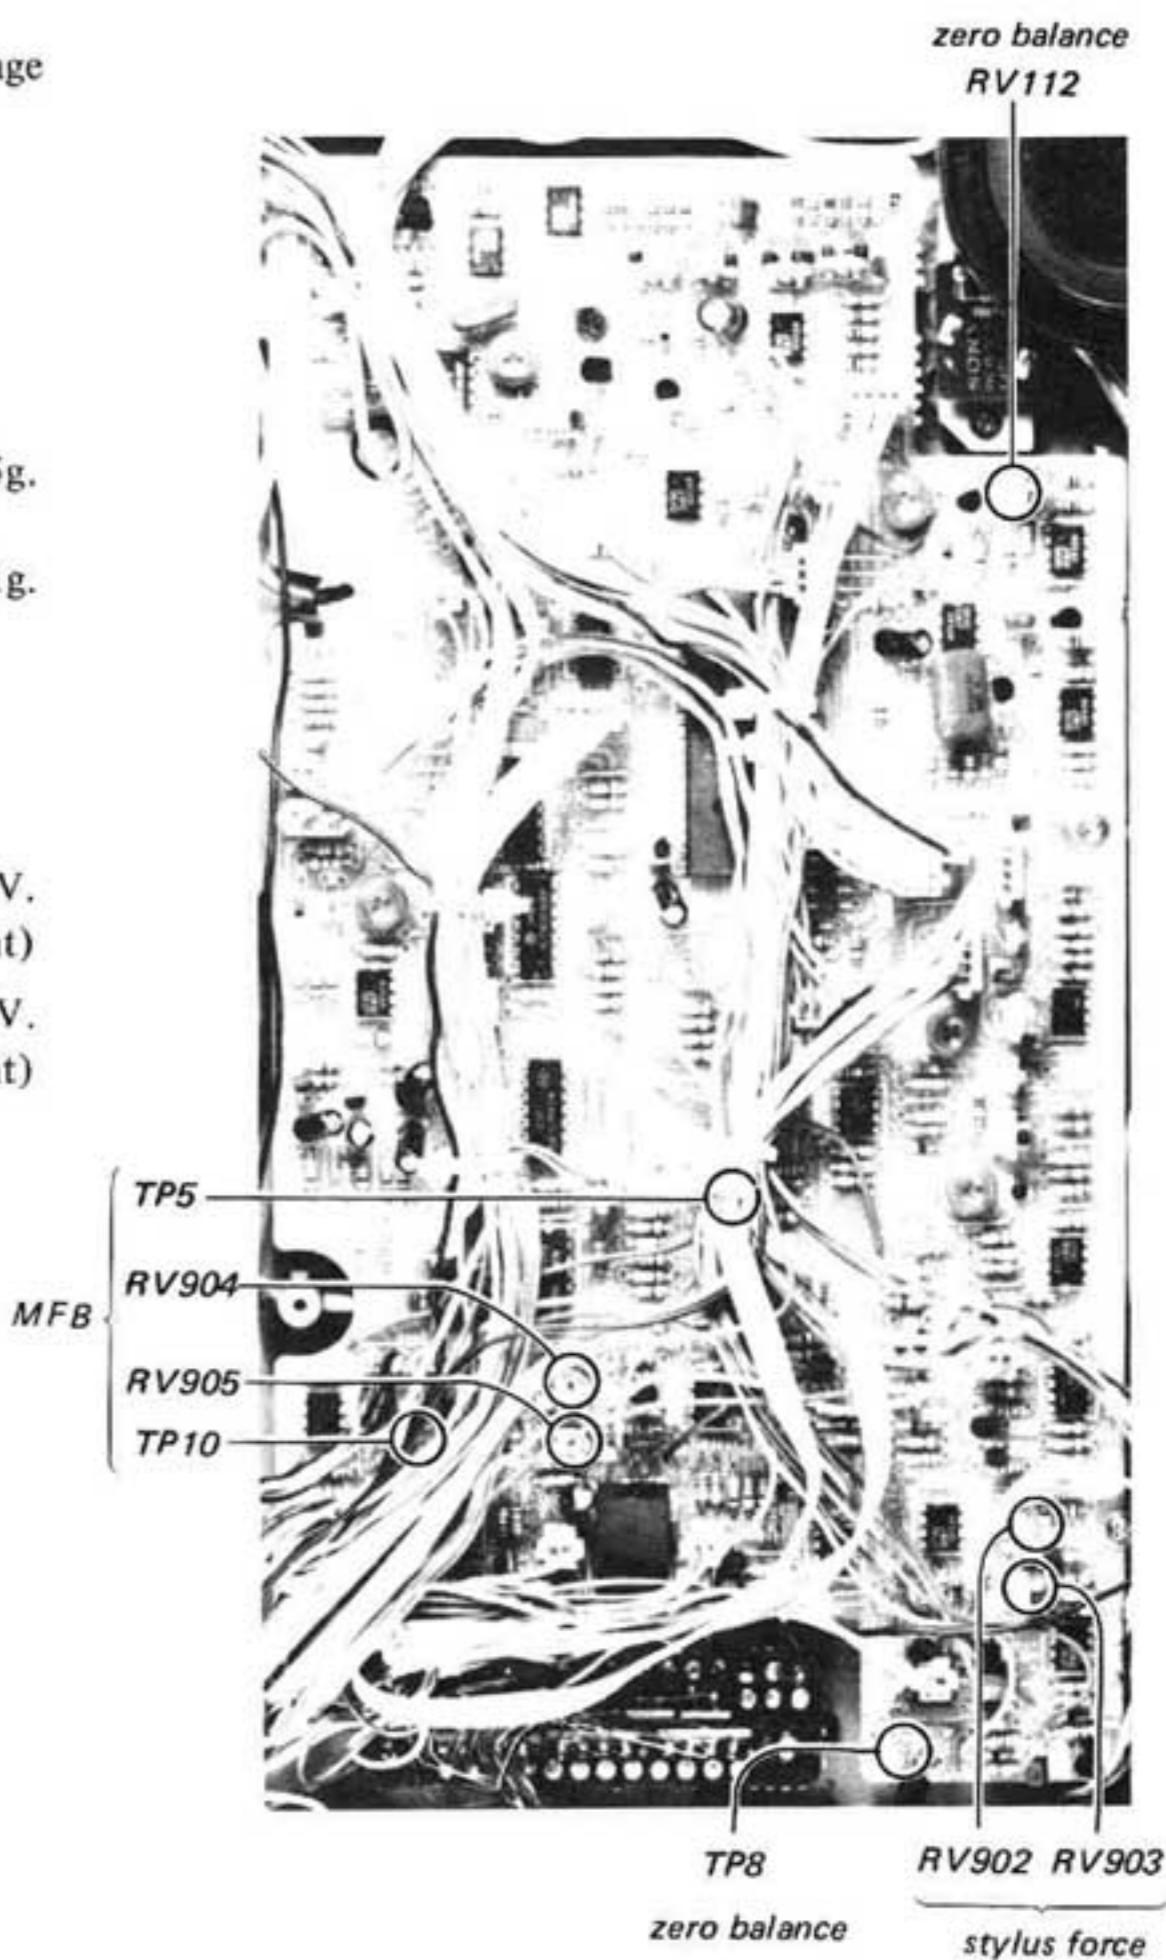

1. Place extra weight of 3g on the shell.
2. During play, check that the voltage at TP8 is about  $-0.5V$  and call this voltage "E".
3. When pushing [◀] button, make sure that voltage at TP8 is as identical to "E".  
If necessary, adjust RV112.

**(Stylus Force Adjustment)**

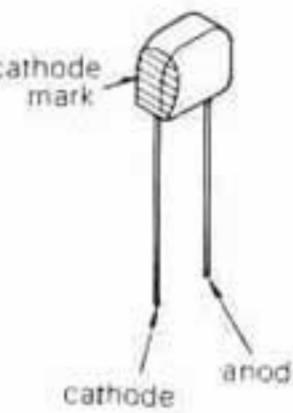

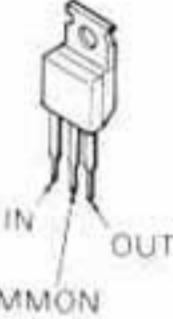

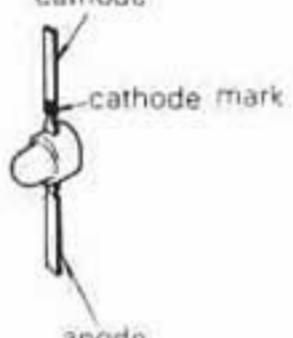

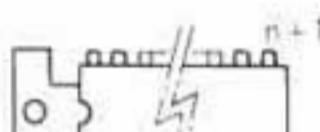

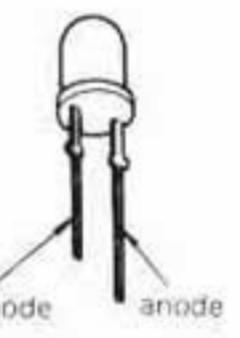

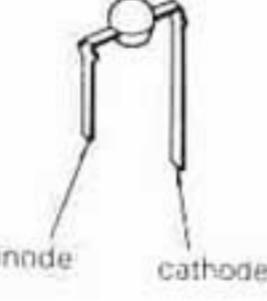

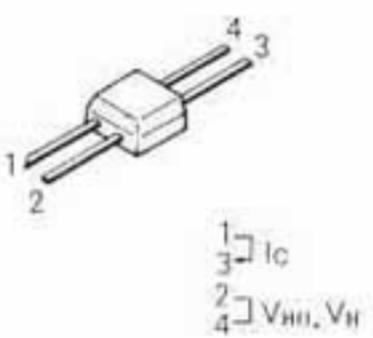

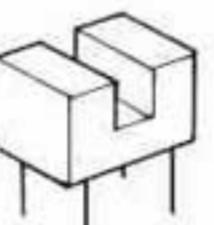

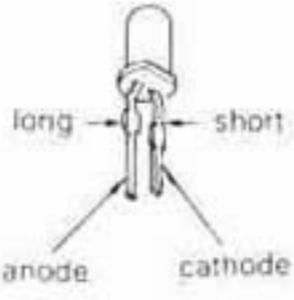

1. Set RV901 (STYLUS) at 2.5g.
2. Adjust RV903 so that the stylus force is 2.5g.  
3. Next, set RV901 at 1g.  
Adjust RV902 so that the stylus force is 1g.

**(VER, HOR MFB Adjustment)**

1. Mode: PLAY
2. Adjust RV904 so that voltage at TP5 is  $0 \pm 0.1V$ .  
.....(VER MFB adjustment)
3. Adjust RV905 so that voltage at TP10 is  $0 \pm 0.1V$ .  
.....(HOR MFB adjustment)

## NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "▲" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

## CAPACITORS:

- All capacitors are in  $\mu$ F. Common capacitors are omitted. Refer to the following lists for their part numbers.  
MF: $\mu$ F, PF: $\mu\mu$ F.

## RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.

• F : nonflammable

## COILS

• MMH : mH, UH :  $\mu$ H

The components identified by shading and mark ▲ are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque ▲ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

## NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "▲" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

## CAPACITORS:

- All capacitors are in  $\mu\text{F}$ . Common capacitors are omitted. Refer to the following lists for their part numbers.  
MF: $\mu\text{F}$ , PF: $\mu\mu\text{F}$ .

## RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.

• F : nonflammable

## COILS

• MMH : mH, UH :  $\mu\text{H}$

The components identified by shading and mark ▲ are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque ▲ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

## NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "▲" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (△-△△△-△△△-XX or △-△△△△-△△△-X) may be different from those used in the set.

## CAPACITORS:

- All capacitors are in  $\mu$ F. Common capacitors are omitted. Refer to the following lists for their part numbers.  
MF: $\mu$ F, PF: $\mu$ PF.

## RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.

• F : nonflammable

## COILS

• MMH : mH, UH :  $\mu$ H

The components identified by shading and mark ▲ are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque ▲ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

## HARDWARE NOMENCLATURE

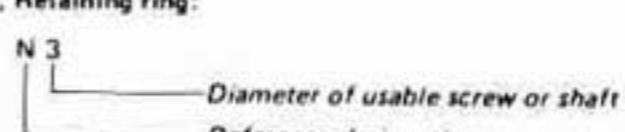

Screw:

Unless otherwise indicated, it means cross-recessed head (Phillips type).

Nut, Washer, Retaining ring:

Reference Designation	Shape	Description	Remarks
SCREWS			
P		pan-head screw	binding-head (B) screw for replacement
PWH		pan-head screw with washer face	binding-head (B) screw and flat washer for replacement
PS PSP		pan-head screw with spring washer	binding-head (B) screw and spring washer for replacement
PSW PSPW		pan-head screw with spring and flat washers	binding-head (B) screw and spring and flat washers for replacement
R		round-head screw	binding-head (B) screw for replacement
K		flat-countersunk-head screw	
RK		oval-countersunk-head screw	
B		binding-head screw	
T		truss-head screw	binding-head (B) screw for replacement
F		flat-fillister-head screw	
RF		fillister-head screw	
BV		braizer-head screw	

Reference Designation	Shape	Description	Remarks
SELF-TAPPING SCREWS			
TA		self-tapping screw	ex: TA, P 3 x 10
PTP		pan-head self-tapping screw	binding-head self-tapping (TA, B) screw for replacement
PTPWH		pan-head self-tapping screw with washer face	binding-head self-tapping (TA, B) screw and flat washer for replacement
PTTWH		pan-head thread-rolling screw with washer face	binding-head (B) screw and flat washer for replacement
SET SCREWS			
SC		set screw	
SC		hexagon socket set screw	ex: SC 2.6 x 4, hexagon socket
NUT			
N		nut	
WASHERS			
W		flat washer	
SW		spring washer	
LW		internal-tooth lock washer	ex: LW3, internal
LW		external-tooth lock washer	ex: LW3, external
RETAINING RINGS			
E		retaining ring	
G		grip-type retaining ring
