Service Manual

Turntable System

SL-D303

[M], [MC]

Areas

- * [M] is available in U.S.A.
- * [MC] is available in Canada.

Specifications

Specifications are subject to change without notice for further improvement.
Weight and dimensions shown are approximate.

■ General

Power supply:	120 V, AC, 50 or 60 Hz
Power consumption:	6 W
Dimensions: (W x H x D)	43 x 10.6 x 37.5 cm (16-15/16" x 4-7/32" x 14-3/4") Maximum height when top (dust cover) is open. 43 x 37 x 42 cm (16-15/16" x 14-9/16" x 16-17/32")
Weight:	6 kg (13.2 lb.)

■ Turntable section

Type:	Direct drive automatic turntable Auto start Auto return Auto stop Manual play Repeat play
Drive method:	Direct drive
Motor:	Brushless DC motor
Drive Control method:	F-G servo control
Turntable platter:	Aluminum die-cast Diameter 31.2 cm (12-9/32 inches)
Turntable speeds:	33-1/3 rpm and 45 rpm
Pitch control:	10% adjustment range
Wow and flutter:	0.012% WRMS* 0.025% WRMS (JIS C5521) ± 0.035% peak (IEC 98A Weighted)

*This rating refers to turntable assembly alone, excluding effects of record, cartridge or tonearm, but including platter.
Measured by obtaining signal from built-in frequency generator of motor assembly.

Rumble:	-56 dB (IEC 98A Unweighted) -78 dB (IEC 98A Weighted)
----------------	--

■ Tonearm section

Type:	Universal tonearm "S" shaped tubular arm Static balanced type
Effective length:	230 mm (9-1/16")
Overhang:	15 mm (19/32")
Tracking error angle:	Within 2° 32' at the outer groove of 30 cm (12") record Within 0° 32' at the inner groove of 30 cm (12") record
Offset angle:	22°
Friction:	Less than 7 mg (lateral, vertical)
Effective mass:	11 g (without cartridge)
Stylus pressure adjustment range:	0 - 2.5 g
Applicable cartridge weight range:	See page 5
Headshell weight:	7.5 g
Phono cable capacitance:	135 pF

LOCATION OF CONTROLS

■ DISASSEMBLY INSTRUCTIONS

● How to remove the bottom board and automatic mechanism plate

1. Fix the tonearm on the rest.
2. Remove the turntable.
3. Close the dust cover, and turn over the unit, taking care not to scratch it.
4. Remove the bottom board setscrews ① ~ ⑦. Then, the bottom board can be removed. (See Fig. 1)
5. Remove the shield plate setscrews ⑧ and ⑨. (See Fig. 2)
6. Remove the regulator transistor P.C.B. setscrew ⑩. (See Fig. 2)
7. Remove the automatic mechanism plate setscrews ⑪ ~ ⑯. Then, the automatic mechanism plate can be removed. (See Fig. 2)

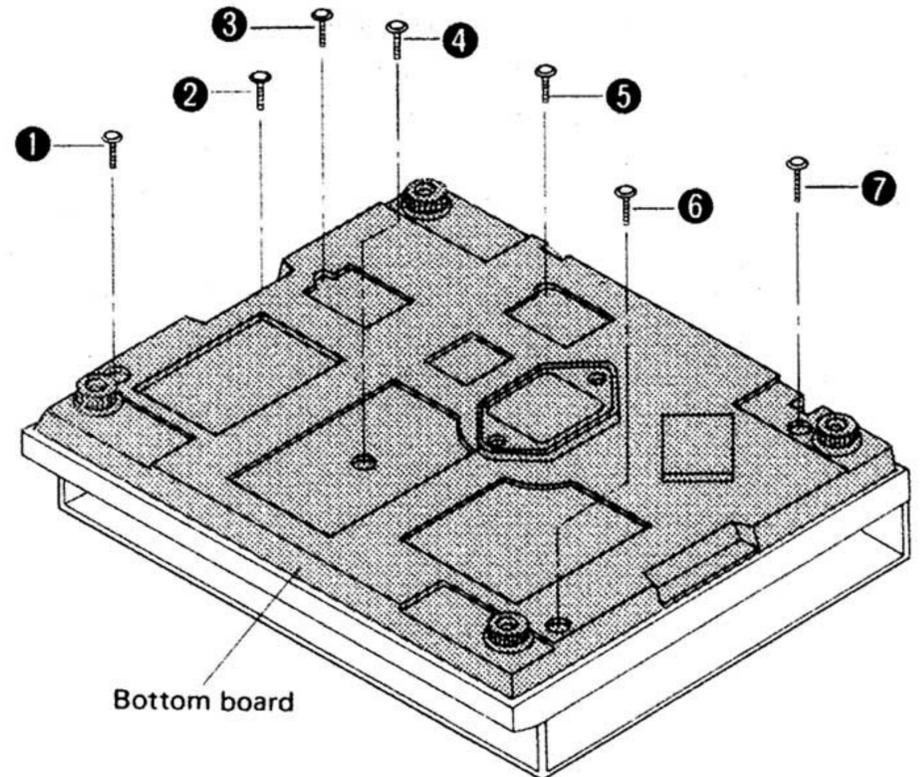

Fig. 1

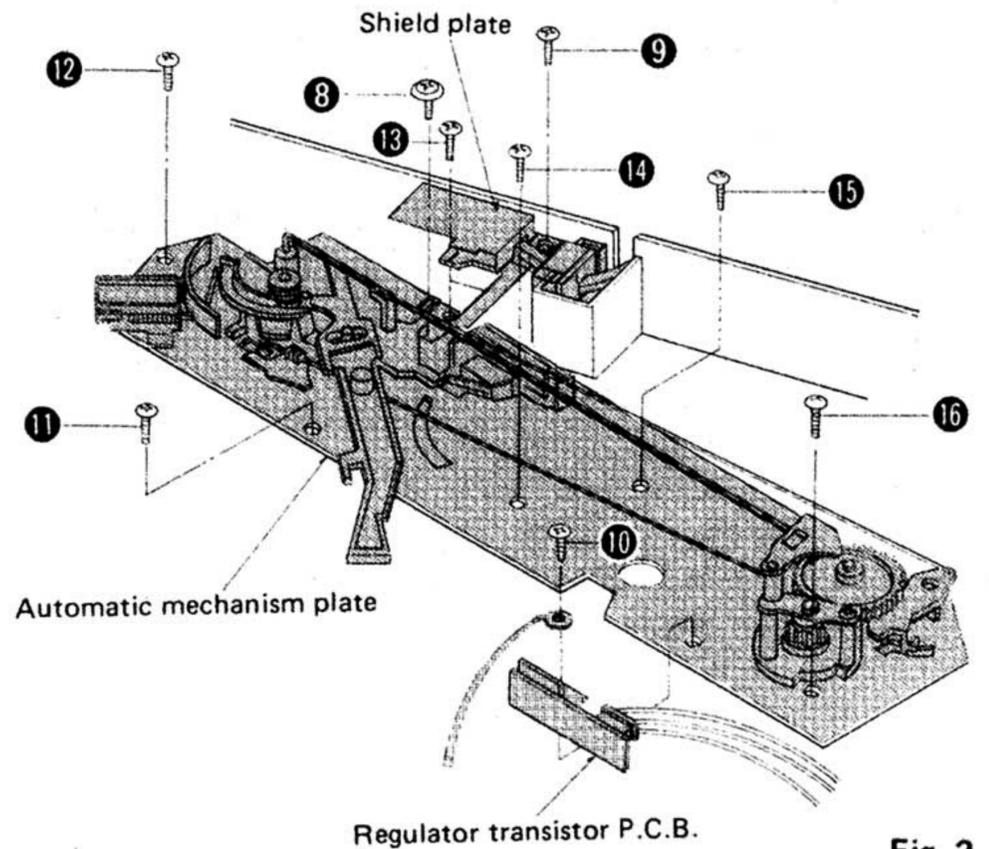

Fig. 2

● How to remove the stator frame

1. Remove the bottom board and automatic mechanism plate. (Refer to "How to remove the bottom board and automatic mechanism plate".)
2. Open the "lead holder" of the lead connector and pull out the lead wire of the arrow (A) in Fig. 3.
3. Remove the stator frame setscrews ⑰ ~ ⑲. Then the stator frame can be removed. (See Fig. 3)

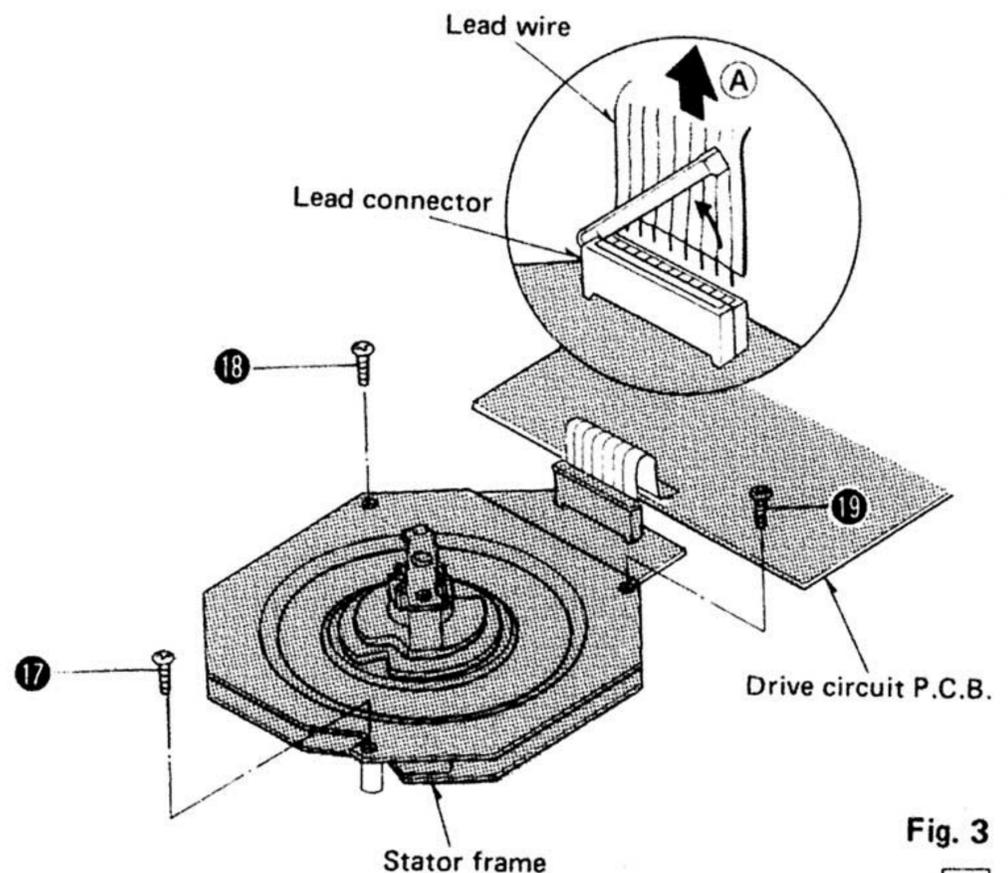

Fig. 3

● **How to remove the drive circuit P.C.B.**

1. Remove the bottom board. (Refer to "How to remove the bottom board and automatic mechanism plate".)
2. Open the "lead holder" of the lead connector and pull out the lead wire. (Refer to "How to remove the stator frame".)
3. Remove the drive circuit P.C.B. setscrews ⑳ ~ ㉒ and connectors ㉓ and ㉔. Then the drive circuit P.C.B. can be removed. (See Fig. 4)

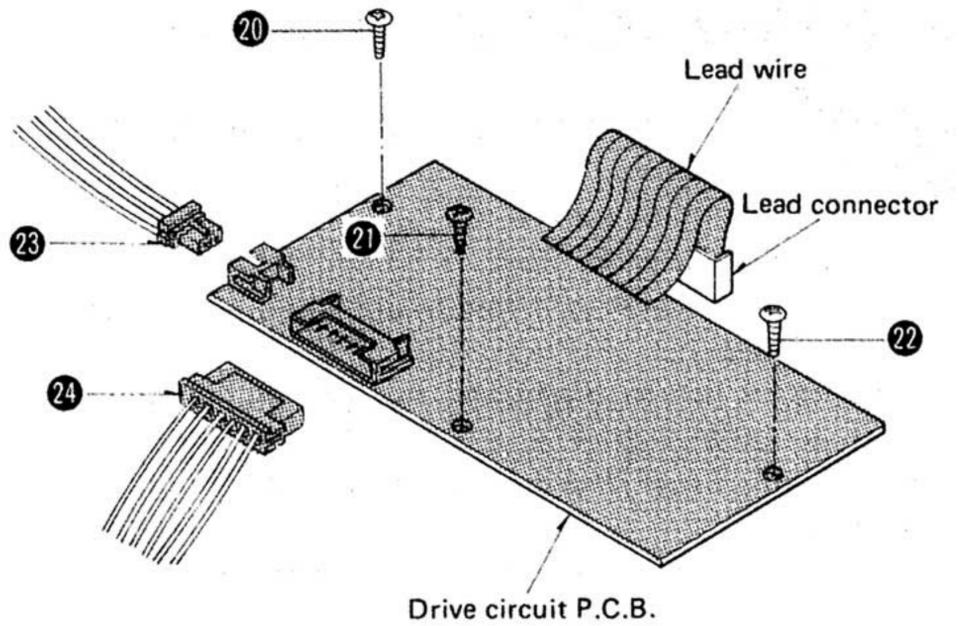

Fig. 4

● **How to remove the tonearm and lift base plate**

1. Remove the bottom board and automatic mechanism plate. (Refer to "How to remove the bottom board and automatic mechanism plate".)
 2. Remove the PU fixing plate setscrew ㉕ and canceller spring. (See Fig. 5)
 3. Unsolder the 5 lead wires from the tonearm. (See Fig. 5)
 4. Remove the tonearm setscrews ㉖ and ㉗. Then the tonearm can be removed. (See Fig. 5)
 5. To disassemble the lift substrate, disengage the arm lift fixing screw ㉘ before turning over the body, then remove the arm lift. (See Fig. 6)
- Note:** Remove the spring under the arm lift at the same time.
6. Remove the anti-skating control knob. (See Fig. 6)
 7. Turn over the unit and remove the PU fixing plate.
 8. Remove the lift base plate setscrews ㉙ and ㉚. Then, the lift base plate can be removed. (See Fig. 5)

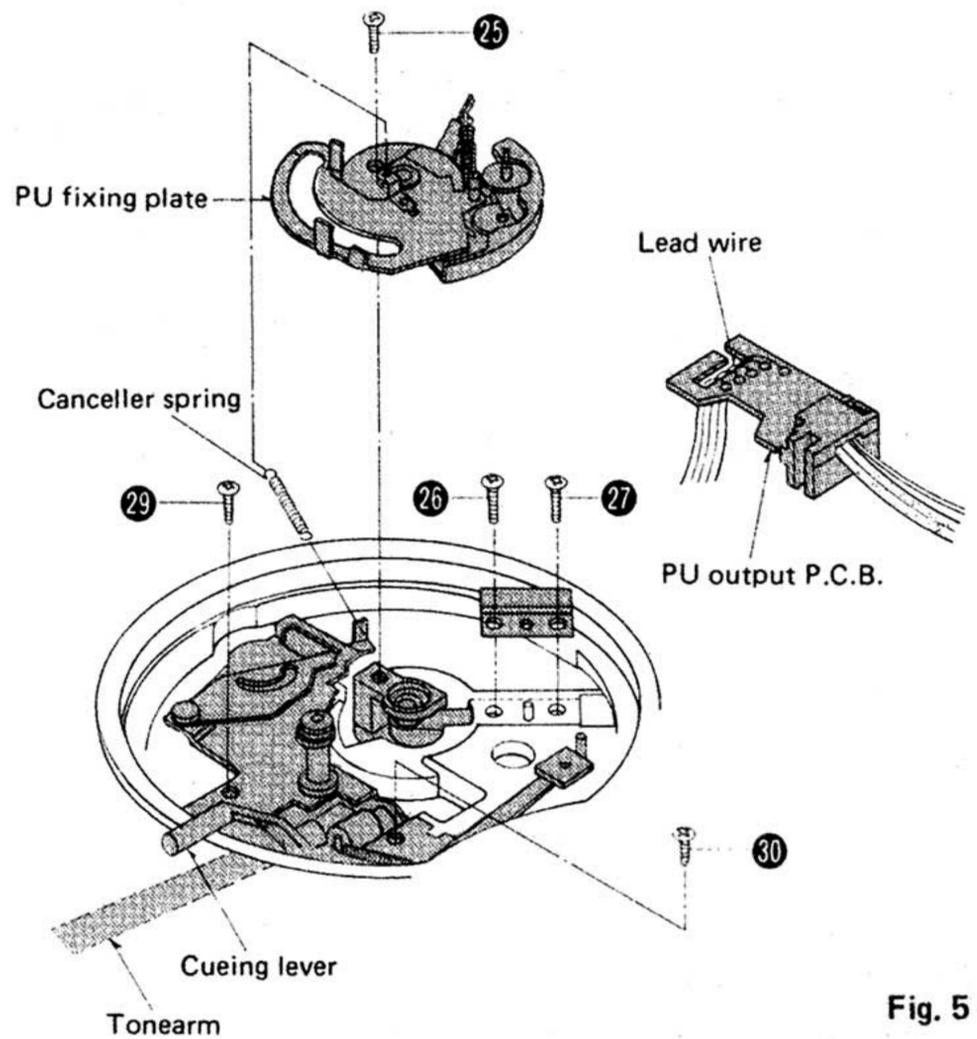

Fig. 5

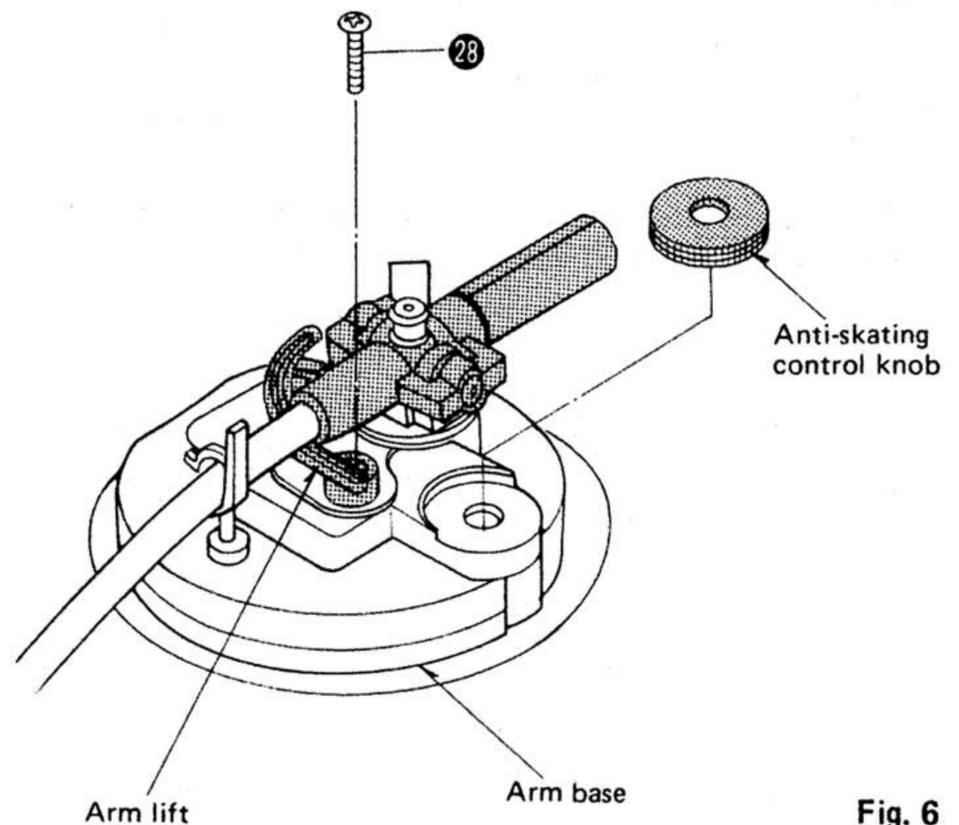

Fig. 6

REPLACEMENT OF HALL ELEMENT

When replacing the Hall element of the stator frame, be sure to place it with the marking side up as shown Fig. 7.

* The leg position is not specified provided that the marking side is up.

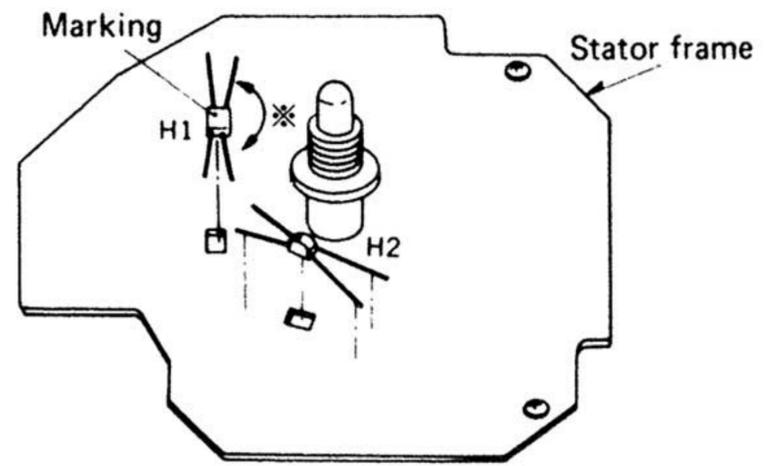

Fig. 7

CARTRIDGE INSTALLATION

When installing a cartridge, follow the instructions that came with the cartridge.

1. Connect the lead wires to the cartridge terminals.
The terminals of most cartridges are color coded.
Connect each lead wire to the terminal of the same color.

White (L+) Left channel +
Blue (L-) Left channel -
Red (R+) Right channel +
Green (R-) Right channel -

2. Mount the cartridge in the headshell using the screws provided with the cartridge. (Fig. 8)

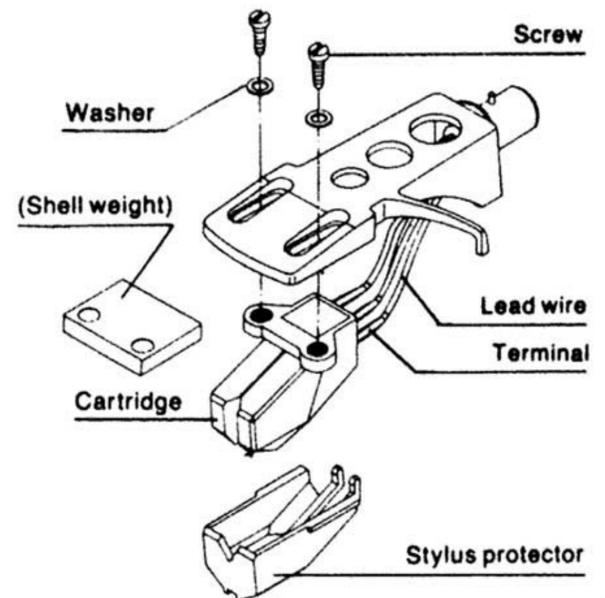

Fig. 8

ABOUT CARTRIDGE WEIGHT

(See chart below)

Cartridges weighing between 3.5 and 7.5 g can be used on this tonearm (with the headshell and accessory shell weight supplied).

If you purchase the optional auxiliary weight (part number: SFPWG17202), cartridges weighing up to 10.5 g can be used.

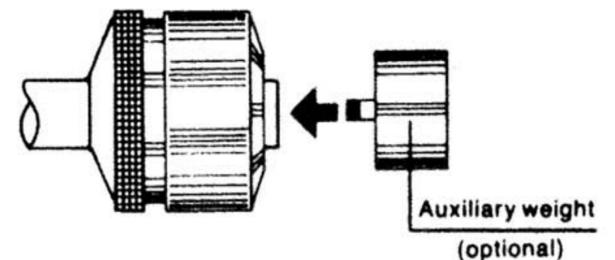

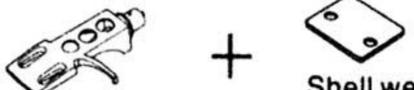

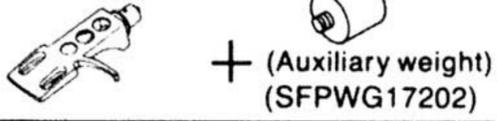

Fig. 9

Supplied headshell in combination with other parts.	Allowable cartridge weight. (Included the cartridge mounting screws)							
	4 g	5	6	7	8	9	10	11
A)  Headshell only (7.5 g)								
B)  Headshell + Shell weight								
C)  Headshell + (Optional) Shell weight + (Optional) Auxiliary weight (SFPWG17202)								
D)  Headshell + (Auxiliary weight) (SFPWG17202)								

Note:

- Attach the auxiliary weight to the rear end of the tonearm. (Fig. 9)
- When attached, the auxiliary weight bumps against the dust cover, so remove the cover during play.

■ MEASUREMENTS AND ADJUSTMENTS

● Arm-lift height adjustment

The arm-lift height (distance between the stylus tip and record surface when the cueing control is set to the "▼" position) has been adjusted at the factory to approximately 5 mm (3/16"). (Fig. 10)

If the clearance is too narrow or too wide (because of different cartridge dimensions, for example), turn the adjustment screw clockwise or counterclockwise.

(See Fig. 11)

Clockwise rotation

—distance between the record and stylus tip is decreased.

Counterclockwise rotation

—distance between the record and stylus tip is increased.

● Adjustment of automatic start position (Fig. 12)

Note:

The auto-start and auto-return adjustment screw are located together. When the tonearm is in or near the arm rest, the auto-start adjustment screw is visible; (See Fig. 12) when the tonearm is near the center of a record, the auto-return adjustment screw is visible. (See Fig. 13)

If the stylus does not land in the lead-in groove, adjust as follows.

1. Clamp the tonearm to the arm rest.
2. Take off the rubber cap covering the adjustment screw section.

Turn the screw with a screwdriver, clockwise or counterclockwise as necessary.

If the stylus lands too far in,

—turn **counterclockwise**.

If the stylus descends outside the record,

—turn **clockwise**.

Adjust so the stylus tip lands 1 ~ 2mm in from the edge of the record.

● Adjustment of automatic return position (Fig. 13)

1. Put the stylus protector on the cartridge.
2. Take off the rubber cap covering the adjustment screw section and move the tonearm toward the center of the record.

Then, the auto-return position adjustment screw will appear.

If the tonearm tends to return to the arm rest before the play has finished,

—turn **counterclockwise**.

If the tonearm fails to return after the final groove,

—turn **clockwise**.

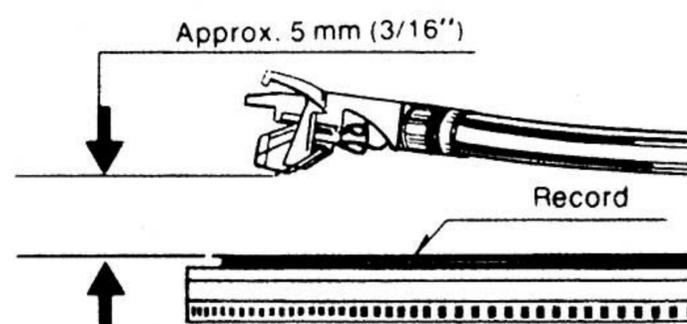

Fig. 10

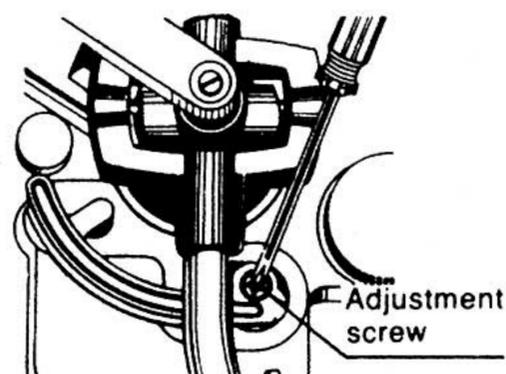

Fig. 11

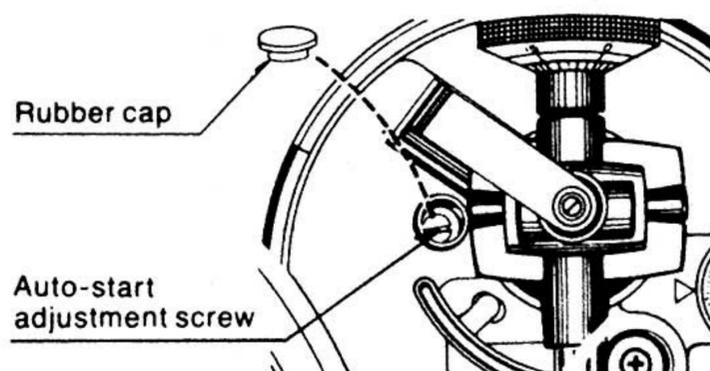

Fig. 12

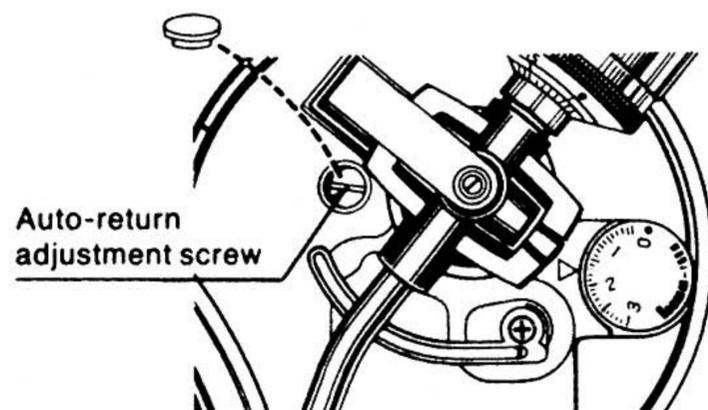

Fig. 13

● **Overhang adjustment (See Fig. 14)**

1. Insert the headshell in the gauge.
2. Loosen the screws and move the cartridge forward or backward until the stylus tip lines up with the edge of the gauge.
3. Tighten the screws without moving the cartridge.

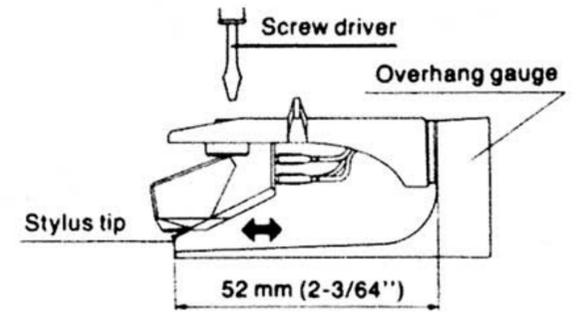

Fig. 14

● **Adjustment of rotational speed**

After replacement of drive IC (IC101) and variable resistors (VR202, 203) or when the rated speed is not obtained by turning the pitch control knob, perform the adjustment according to the following procedure.

1. Remove the bottom plate. (Refer to "Disassembly Instructions".)
2. Place the set on the player repair table.
3. Put on the record and play.
4. Push the speed selector button to "45 r.p.m.". (See Fig. 15)
5. Turn the pitch control knob to central position.
6. Adjust VR202 by the screwdriver from under the set until the rated speed (45 r.p.m.) is obtained while checking it through the stroboscope. (See Fig. 16)
7. Push the speed selector button to "33 r.p.m.". (See Fig. 15)
8. Adjust VR203 by the screwdriver until the rated speed (33-1/3 r.p.m.) is obtained while checking it through the stroboscope. (See Fig. 16)
9. After completing the above-mentioned adjustment, check that the rated speeds can be obtained by pushing the speed selector button.

Note: Be sure to perform the adjustment of 45 r.p.m. first. As a simple method, it is also possible to adjust VR202 and VR203, removing the turntable. (See Fig. 17)

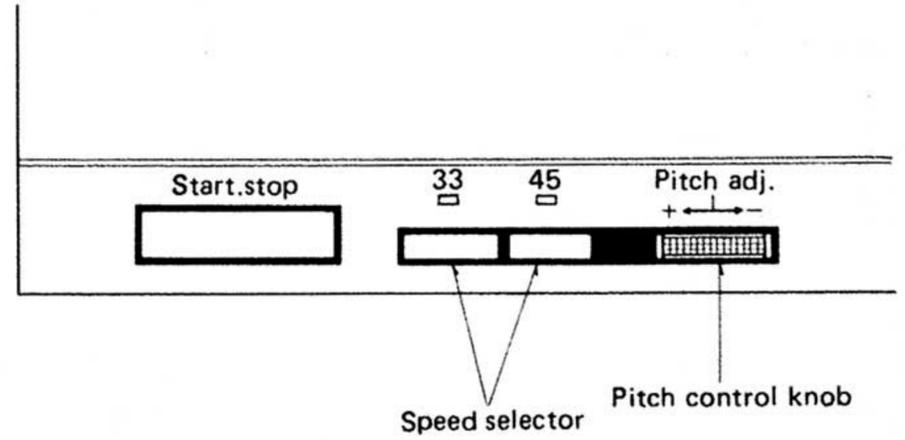

Fig. 15

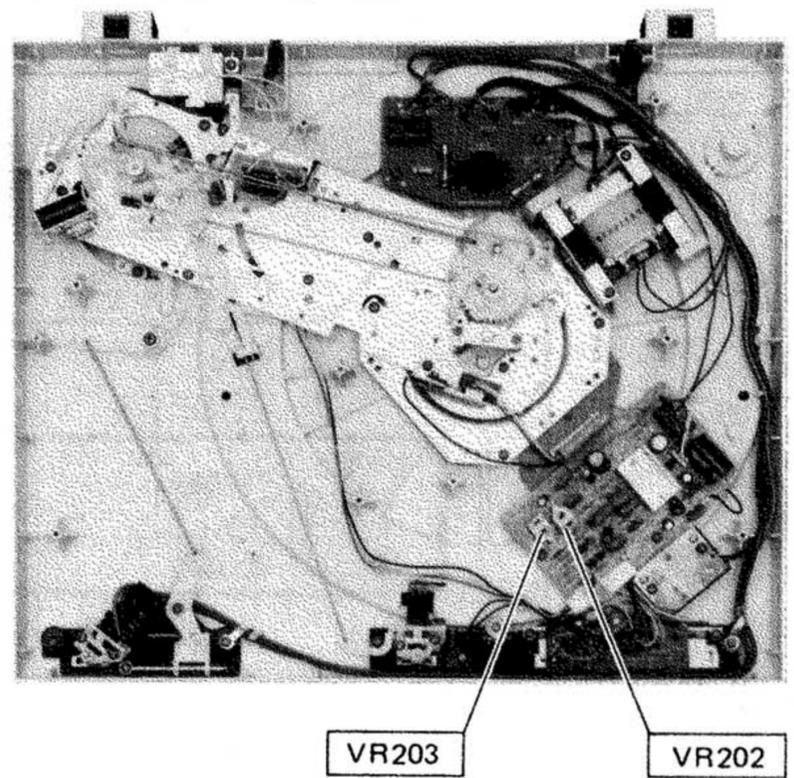

Fig. 16

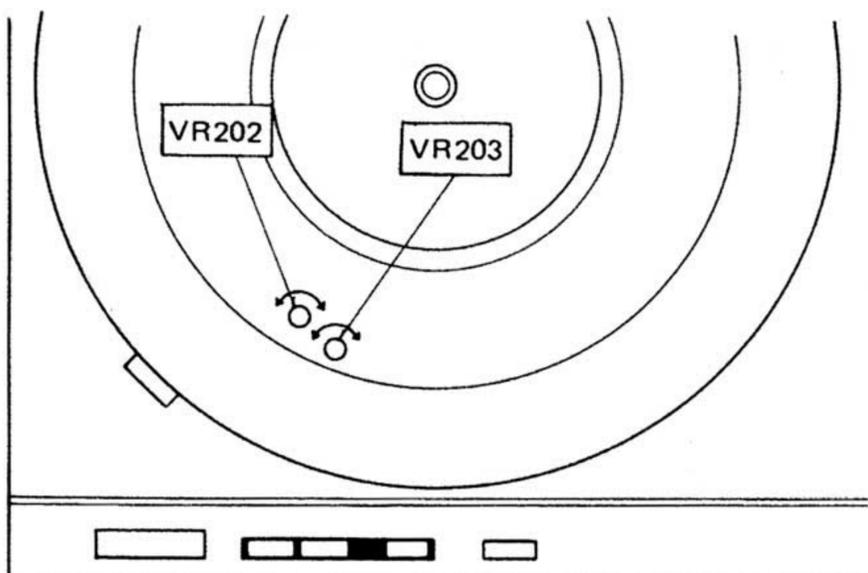

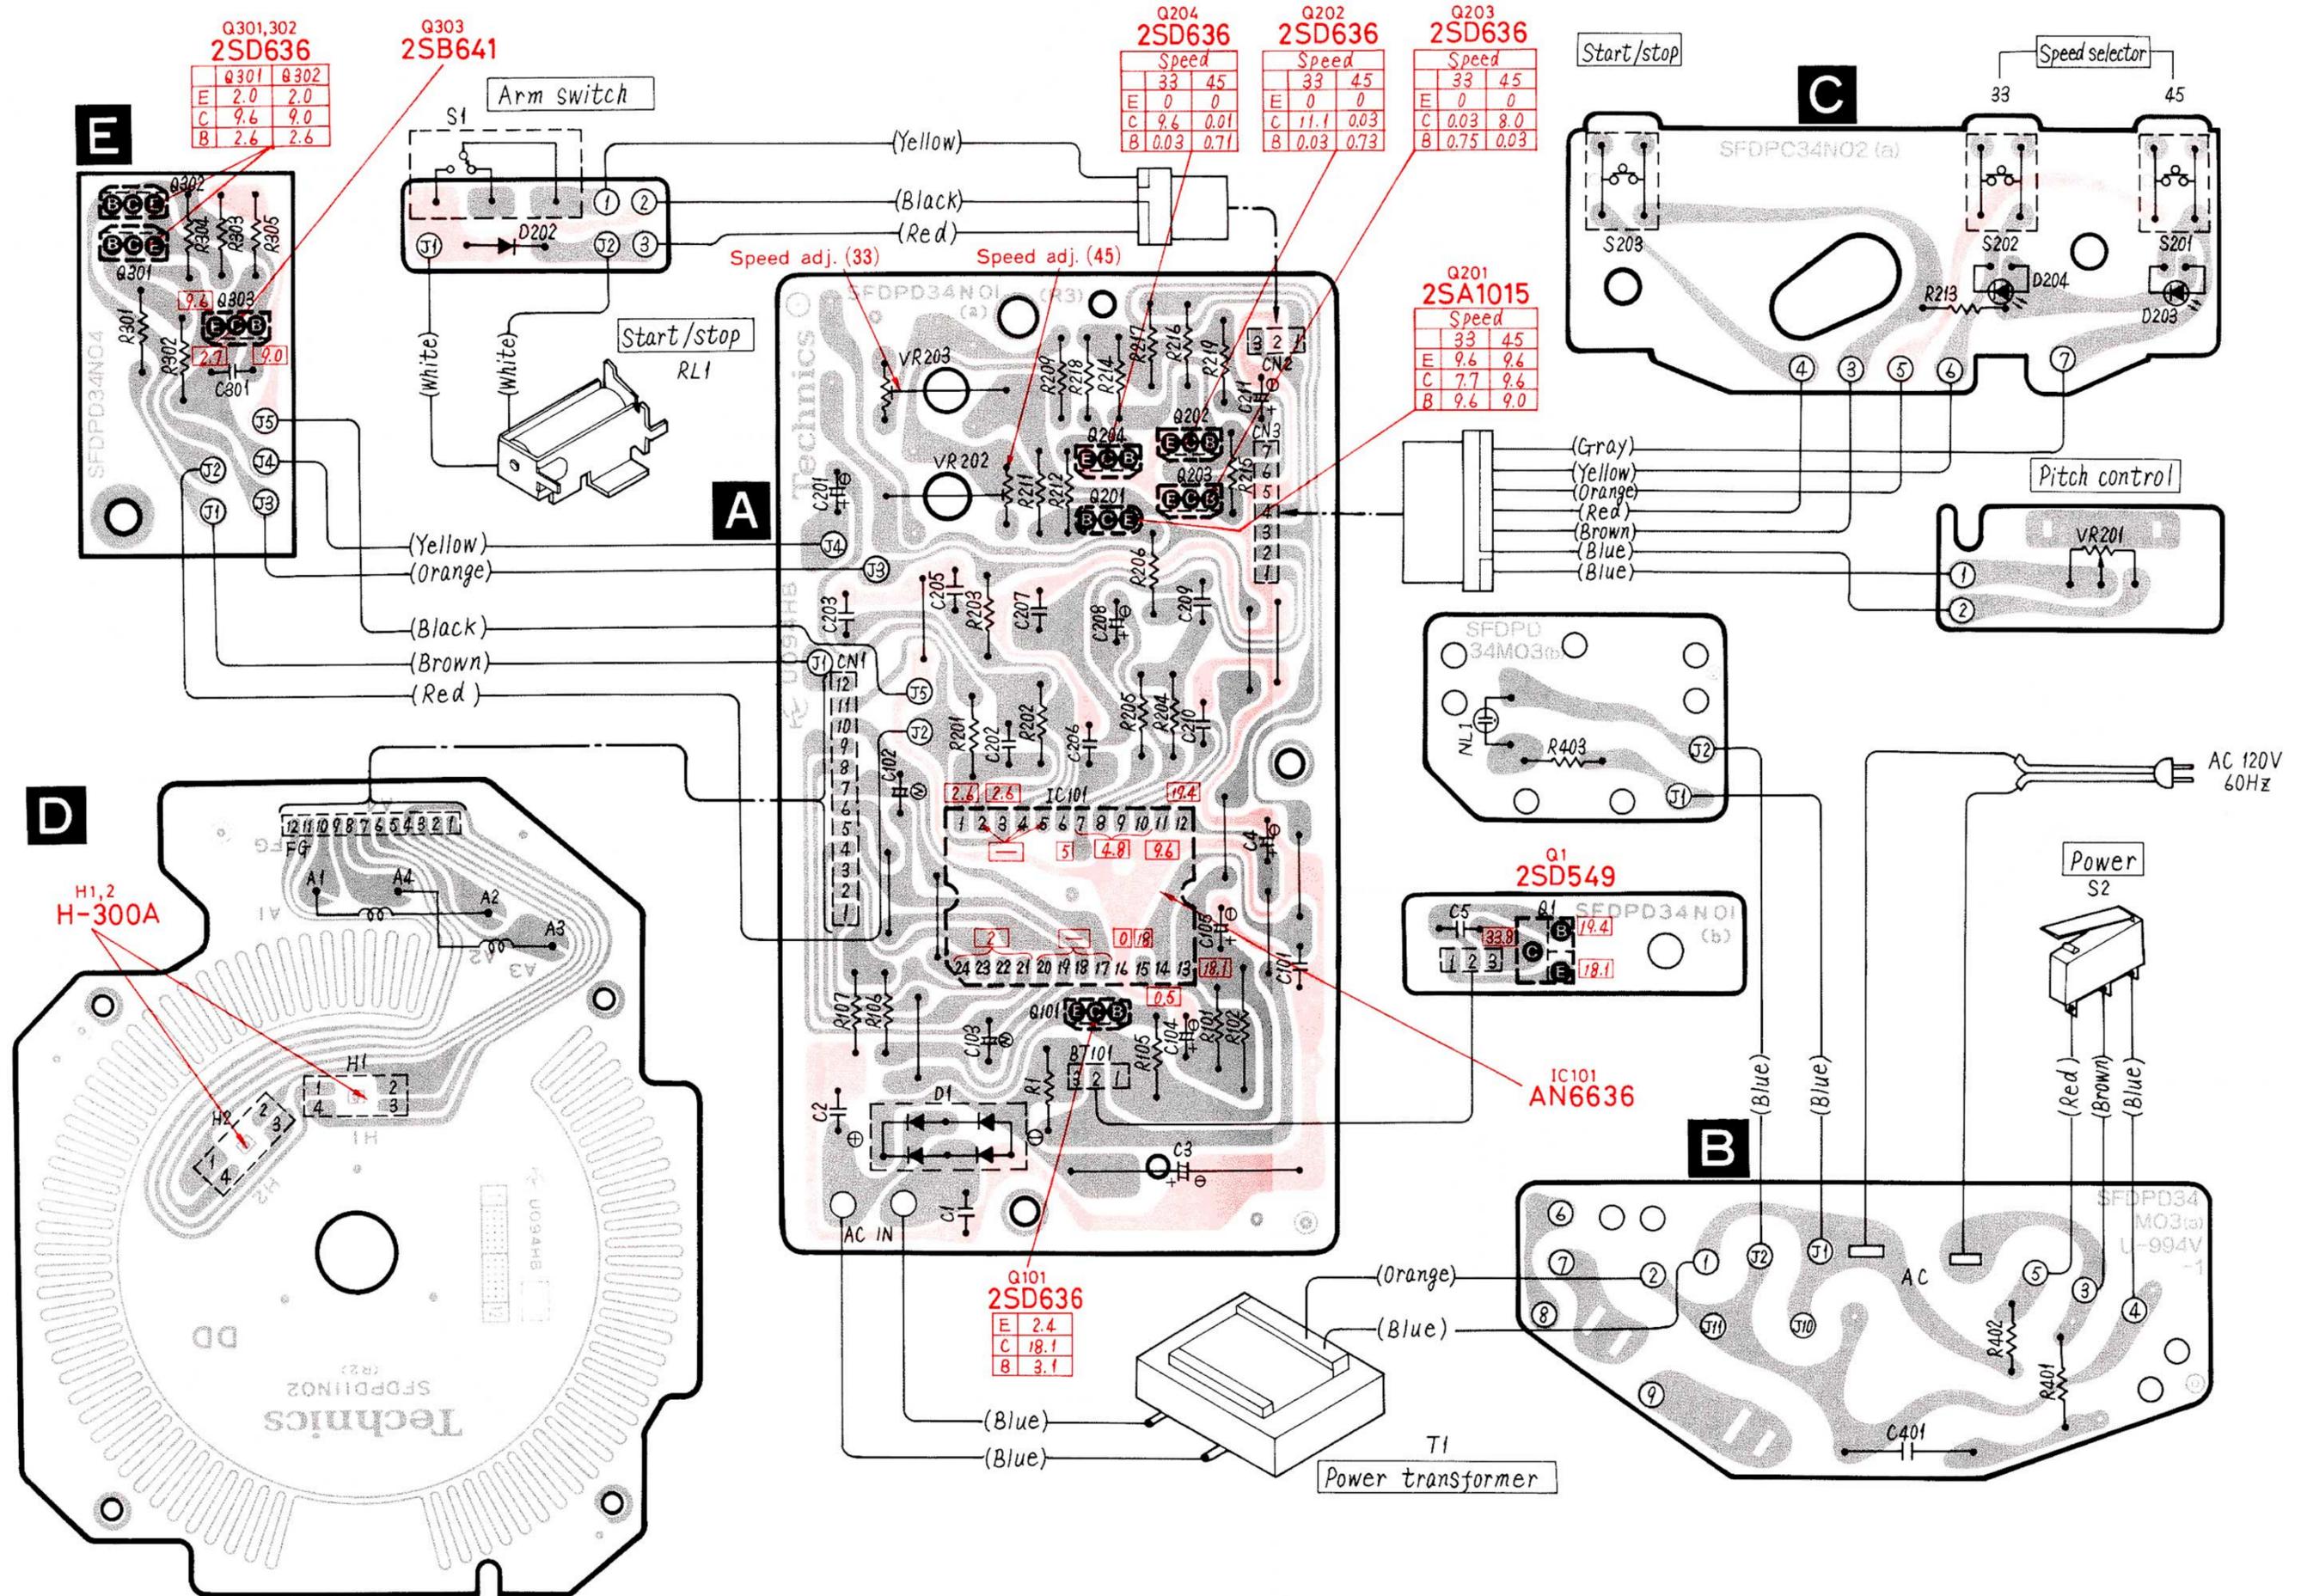

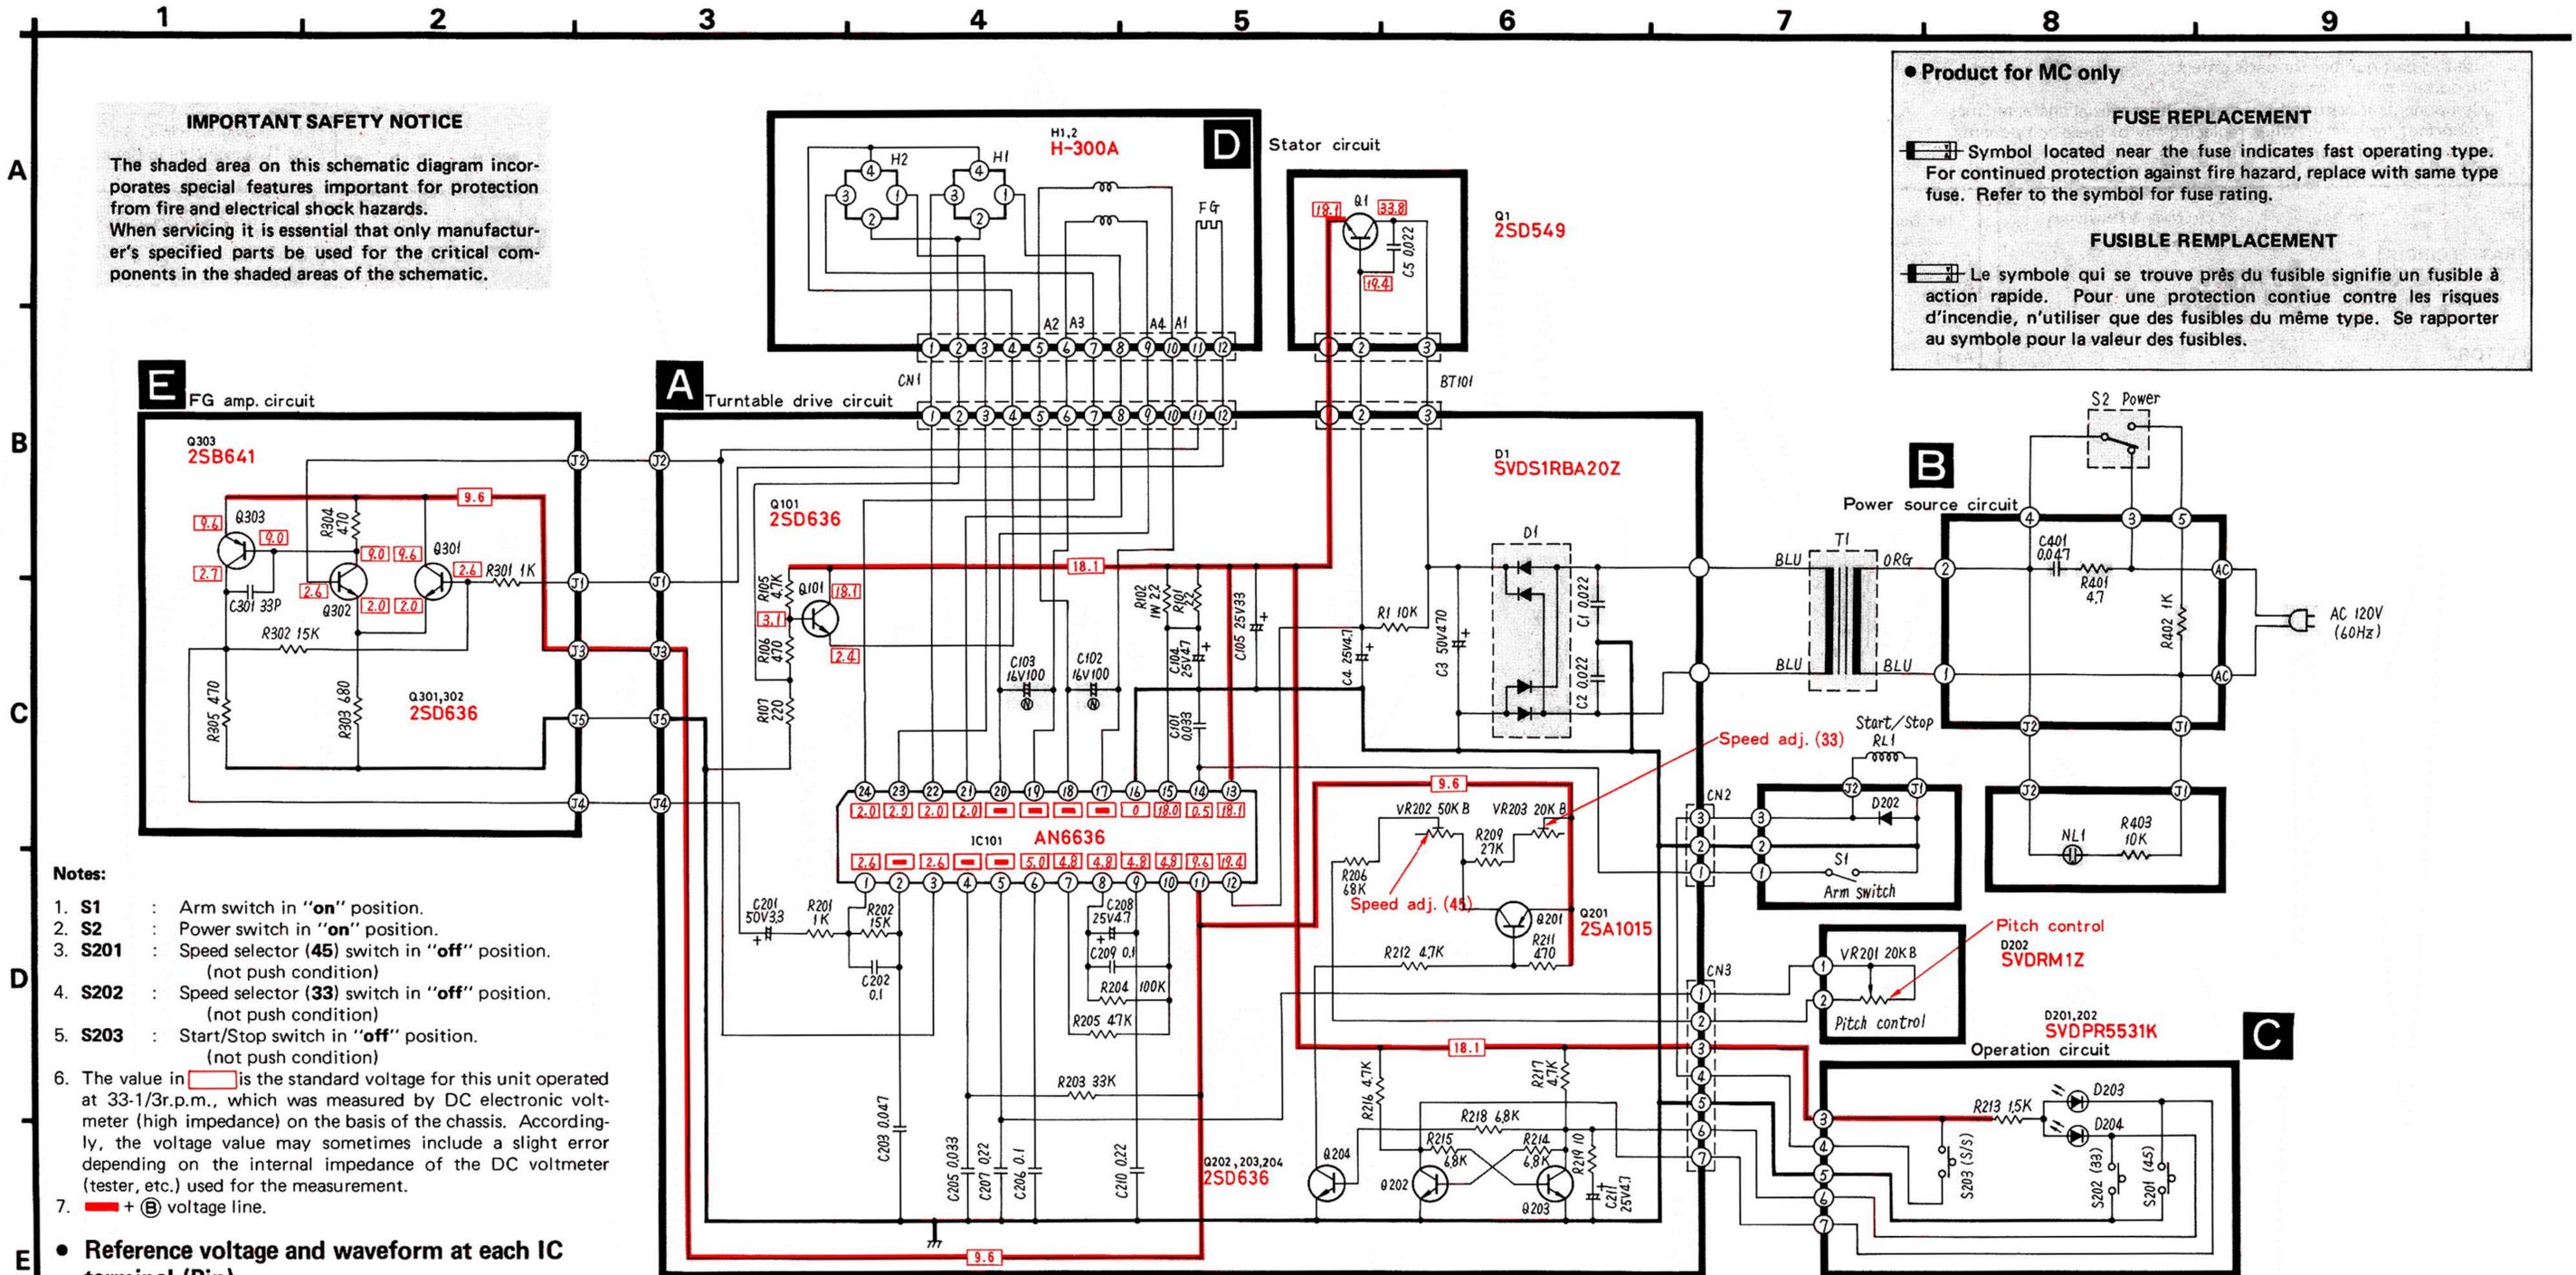

Fig. 17

CIRCUIT BOARD AND WIRING CONNECTION DIAGRAM

Ground (Earth) lines

Product for MC only

FUSE REPLACEMENT
 Symbol located near the fuse indicates fast operating type. For continued protection against fire hazard, replace with same type fuse. Refer to the symbol for fuse rating.

FUSIBLE REMPLACEMENT
 Le symbole qui se trouve près du fusible signifie un fusible à action rapide. Pour une protection continue contre les risques d'incendie, n'utiliser que des fusibles du même type. Se rapporter au symbole pour la valeur des fusibles.

IMPORTANT SAFETY NOTICE
 The shaded area on this schematic diagram incorporates special features important for protection from fire and electrical shock hazards. When servicing it is essential that only manufacturer's specified parts be used for the critical components in the shaded areas of the schematic.

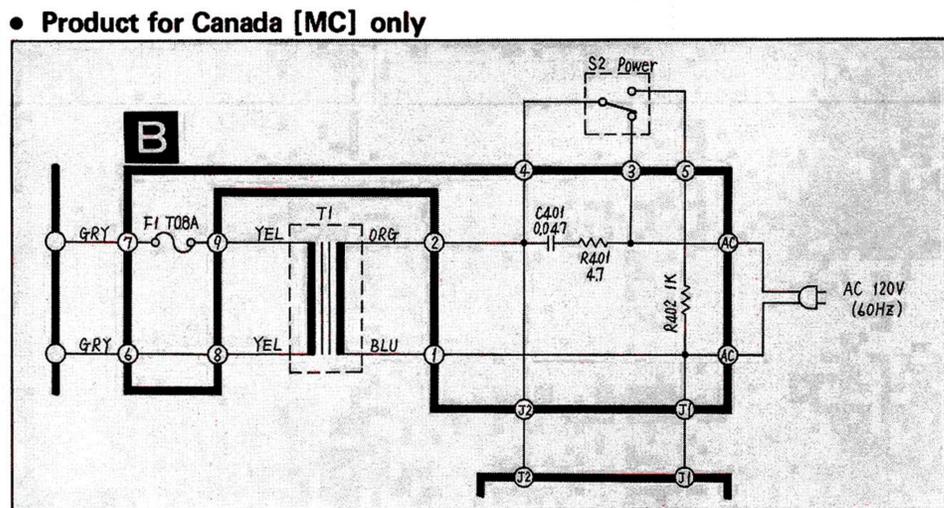

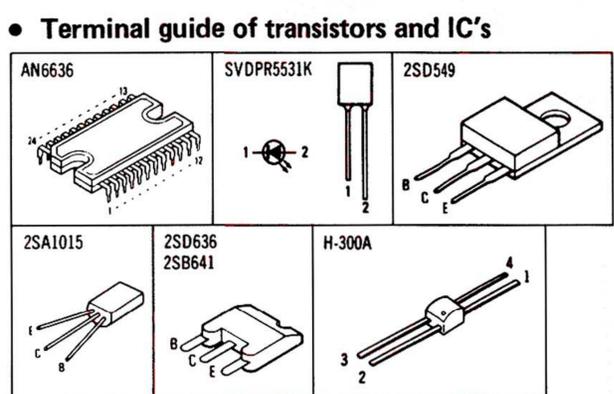

- Notes:**
- S1** : Arm switch in "on" position.
 - S2** : Power switch in "on" position.
 - S201** : Speed selector (45) switch in "off" position. (not push condition)
 - S202** : Speed selector (33) switch in "off" position. (not push condition)
 - S203** : Start/Stop switch in "off" position. (not push condition)
 - The value in is the standard voltage for this unit operated at 33-1/3r.p.m., which was measured by DC electronic voltmeter (high impedance) on the basis of the chassis. Accordingly, the voltage value may sometimes include a slight error depending on the internal impedance of the DC voltmeter (tester, etc.) used for the measurement.
 - + voltage line.

Reference voltage and waveform at each IC terminal (Pin)
 This indicated voltage values and waveform are measured by oscilloscope at 33r.p.m. rotation, IC101 (AN6636).

IC101 (AN6636)

Pin No.	Stop	Start	Pin No.	Stop	Start	Pin No.	Stop	Start
